n/n/**
* This plugin resolves the JSON pointers.
* A major part of this plugin deals with cyclic references via 2 mechanisms.
* 1. If a pointer was already resolved before in this path, halt.
* 2. If the patch value points to one of the ancestors in this path, halt.
* Note that either one of these mechanism is sufficient, both must be in place.
* For examples:
* Given the following spec, #1 alone is insufficient because after the 2nd application, there will be a cyclic object reference.
* a.b.c: $ref-d
* d.e.f: $ref-a (per #1, safe to return patch as no immediate cycle)
* Given the following spec, #2 alone is

```

```

insufficient because although there will\n * never be any cyclic object reference, the plugin will keep producing

_asyncToGenerator from '@babel/runtime-corejs3/helpers/asyncToGenerator';\nimport _regeneratorRuntime
from '@babel/runtime-corejs3/regenerator';\n// The subtree resolver is a higher-level interface that allows you
to\n// get the same result that you would from `Swagger.resolve`, but focuses on\n// a subtree of your object.\n//\n// It makes several assumptions that allow you to think less about what resolve,\n// specmap, and normalizeSwagger
are doing: if this is not suitable for you,\n// you can emulate `resolveSubtree`'s behavior by talking to the
traditional\n// resolver directly.\n//\n// By providing a top-level `obj` and a `path` to resolve within, the subtree\n// at

```

`path` will be resolved and normalized in the context of your top-level `obj`. You'll get the resolved subtree you're interested in as a return value (or, you can use `returnEntireTree` to get everything back). This is useful for cases where resolving your entire object is unnecessary and/or non-performant; we use this interface for lazily resolving operations and models in Swagger-UI, which allows us to handle larger definitions. It's likely that Swagger-Client will rely entirely on lazy resolving in future versions. TODO: move the remarks above into project documentation

Use Object implementation (most compatible, even IE6)\n *!\n * Browsers that support typed arrays are IE 10+,
Firefox 4+, Chrome 7+, Safari 5.1+,\n * Opera 11.6+, iOS 4.2+.\n *!\n * Due to various browser bugs, sometimes the
Object implementation will be used even\n * when the browser supports typed arrays.\n *!\n * Note:\n *!\n * -
Firefox 4-29 lacks support for adding new properties to `Uint8Array` instances,\n * See:
https://bugzilla.mozilla.org/show_bug.cgi?id=695438.\n *!\n * - Chrome 9-10 is missing the
`TypedArray.prototype.subarray` function.\n *!\n * - IE10 has a broken `TypedArray.prototype.subarray` function
which returns arrays of\n * incorrect length in some situations.\n *!\n * We detect these buggy browsers and set
`Buffer.TYPED_ARRAY_SUPPORT` to `false` so they\n * get the Object implementation, which is slower but
behaves correctly.\n *!\n\nBuffer.TYPED_ARRAY_SUPPORT = global.TYPED_ARRAY_SUPPORT !==
undefined\n ? global.TYPED_ARRAY_SUPPORT\n : typedArraySupport()\n\n**\n * Export kMaxLength after
typed array support is determined.\n */\n\nexports.kMaxLength = kMaxLength()\n\nfunction typedArraySupport ()

**n *
Checks if `predicate` returns truthy for **any** element of `collection`.
* Iteration is stopped once `predicate`
returns truthy.
The predicate is
* invoked with three arguments: (value, index|key, collection).
* @static
* @memberOf _
* @since 0.1.0
* @category Collection
* @param {Array|Object} collection The collection to
iterate over.
* @param {Function} [predicate=_identity] The function invoked per iteration.
* @param-

```

```

{Object} [guard] Enables use as an iteratee for methods like `_.map`.
  @returns {boolean} Returns `true` if any element passes the predicate check,
  @example
  _.some([null, 0, 'yes', false], Boolean);
  // => true
  var users = [
    { 'user': 'barney', 'active': true },
    { 'user': 'fred', 'active': false }
  ];
  // The `_.matches` iteratee shorthand.
  _.some(users, { 'user': 'barney', 'active': false });
  // => false
  // The `_.matchesProperty` iteratee shorthand.
  _.some(users, ['active', false]);
  // => true
  // The `_.property` iteratee shorthand.
  _.some(users, 'active');
  // => true

The\n        debounced function comes with a `cancel` method to cancel\n        * delayed `func` invocations and a `flush` method to\n        immediately invoke them.\n        *\n        Provide `options` to indicate whether `func` should be invoked on the\n        * leading\n        and/or trailing edge of the `wait` timeout. The `func` is invoked\n        * with the last\n        arguments provided to the

```

debounced function. Subsequent calls to the debounced function return the result of the last invocation.

Note: If `leading`` and `trailing`` options are `true``, `func`` is invoked on the trailing edge of the timeout only if the debounced function is invoked more than once during the `wait`` timeout. If `wait`` is `0`` and `leading`` is `false``, `func`` invocation is deferred until to the next tick, similar to `setTimeout`` with a timeout of `0``. See [David Corbacho's article](https://css-tricks.com/debouncing-throttling-explained-examples/) for details over the differences between `_.debounce`` and `_.throttle``.

```

@static
@memberOf _
@since 0.1.0
@category Function
@param {Function} func The function to debounce.
@param {number} [wait=0] The number of milliseconds to delay.
@param {Object} [options={}] The options object.
@param {boolean} [options.leading=false] Specify invoking on the leading edge of the timeout.
@param {number} [options.maxWait] The maximum time `func` is allowed to be delayed before it's invoked.
@param {boolean} [options.trailing=true] Specify invoking on the trailing edge of the timeout.
@returns {Function} Returns the new debounced function.
