Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source"

form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely

link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean

Licensors and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensors and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute,

all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the

NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensors shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensors regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: HOW TO APPLY THE APACHE LICENSE TO YOUR WORK

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

See the License for the specific language governing permissions and limitations under the License.

1.237 @tensorflow/tfjs-backend-cpu 3.11.0

1.237.1 Available under license :

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source"

form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely

link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the

Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean

Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute,

all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the

NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works

as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

=====\n*\nimport * as tf from '@tensorflow/tfjs-core';\n\n/**\n * Takes the sigmoid of the part heatmap output and generates a 2d one-hot\n * tensor with ones where the part's score has the maximum value.\n * @param partHeatmapScores\n * @function toFlattenedOneHotPartMap(partHeatmapScores: tf.Tensor3D): tf.Tensor2D {\n
```

```

const numParts = partHeatmapScores.shape[2];
const partMapLocations = tf.argmax(partHeatmapScores, 2);
const partMapFlattened = tf.reshape(partMapLocations, [-1]);
return tf.oneHot(partMapFlattened, numParts) as tf.Tensor2D;
function clipByMask2d(image: tf.Tensor2D, mask: tf.Tensor2D): tf.Tensor2D {
return tf.mul(image, mask);
}

```

* Takes the sigmoid of the segmentation output, and generates a segmentation mask with a 1 or 0 at each pixel where there is a person or not a person. The threshold determines the threshold of a score for a pixel for it to be considered part of a person.

 @param segmentScores A 3d-tensor of the sigmoid of the segmentation output.

 @param segmentationThreshold The minimum that segmentation values must have to be considered part of the person. Affects the generation of the segmentation mask and the clipping of the colored part image.

 @returns A segmentation mask with a 1 or 0 at each pixel where there is a person or not a person.

 ^export function toMaskTensor(segmentScores: tf.Tensor2D, threshold: number): tf.Tensor2D {

```

return tf.tidy(() => (
    tf.cast(tf.greater(segmentScores, tf.scalar(threshold)), 'int32') as tf.Tensor2D));
}

```

Takes the sigmoid of the person and part map output, and returns a 2d tensor of an image with the corresponding value at each pixel corresponding to the part with the highest value. These part ids are clipped by the segmentation mask. Wherever the a pixel is clipped by the segmentation mask, its value will set to -1, indicating that there is no part in that pixel.

 @param segmentScores A 3d-tensor of the sigmoid of the segmentation output.

 @param partHeatmapScores A 3d-tensor of the sigmoid of the part heatmap output. The third dimension corresponds to the part.

 @returns A 2d tensor of an image with the corresponding value at each pixel corresponding to the part with the highest value. These part ids are clipped by the segmentation mask. It will have values of -1 for pixels that are outside of the body and do not have

 a corresponding part.

 ^export function decodePartSegmentation(segmentationMask: tf.Tensor2D, partHeatmapScores: tf.Tensor3D): tf.Tensor2D {

```

const [partMapHeight, partMapWidth, numParts] = partHeatmapScores.shape;
return tf.tidy(() => {
const flattenedMap = toFlattenedOneHotPartMap(partHeatmapScores);
const partNumbers = tf.expandDims(tf.range(0, numParts, 1, 'int32'), 1);

```

=====
^import * as tfconv from '@tensorflow/tfjs-converter';
^import * as tf from '@tensorflow/tfjs-core';
^import {BodyPixOutputStride} from './types';

```

* BodyPix supports using various convolution neural network models (e.g. ResNet and MobileNetV1) as its underlying base model. The following BaseModel interface defines a unified interface for creating such BodyPix base models. Currently both MobileNet (in ./mobilenet.ts) and ResNet (in ./resnet.ts) implements the BaseModel interface. New base models that conform to the BaseModel interface can be added to BodyPix.

 ^export abstract class BaseModel {
constructor(

from part scores and\n * displacement vectors. It returns up to `maxDetections` object instance\n * detections in  

decreasing root score order. It works as follows: We first\n * create a priority  

queue with local part score maxima above\n * `scoreThreshold`, considering all parts at the same time. Then we\n *  

iteratively pull the top element of the queue (in decreasing score order)\n * and treat it as a root candidate for a new  

object instance. To avoid\n * duplicate detections, we reject the root candidate if it is within a disk\n * of  

`nmsRadius` pixels from the corresponding part of a previously detected\n * instance, which is a form of part-based  

non-maximum suppression (NMS). If\n * the root candidate passes the NMS check, we start a new object instance\n *  

detection, treating the corresponding part as root and finding the\n * positions of the remaining parts by following  

the displacement vectors\n * along the tree-structured part graph. We assign to the newly detected\n * instance a  

score equal to the sum of scores of its parts which have not\n * been claimed by a previous instance (i.e., those at  

least `nmsRadius`\n * pixels away from the corresponding part of all previously  

detected\n * instances), divided by the total number of parts `numParts`.\n *\n * @param heatmapScores 3-D tensor  

with shape `[height, width, numParts]`. \n * The value of heatmapScores[y, x, k]` is the score of placing the `k`-th\n  

* object part at position `(y, x)`. \n *\n * @param offsets 3-D tensor with shape `[height, width, numParts * 2]`. \n *\n * The value of [offsets[y, x, k], offsets[y, x, k + numParts]]` is the\n * short range offset vector of the `k`-th object  

part at heatmap\n * position `(y, x)`. \n *\n * @param displacementsFwd 3-D tensor of shape\n * `[height, width, 2 *  

num_edges]`, where `num_edges = num_parts - 1` is the\n * number of edges (parent-child pairs) in the tree. It  

contains the forward\n * displacements between consecutive part from the root towards the leaves.\n *\n * @param  

displacementsBwd 3-D tensor of shape\n * `[height, width, 2 * num_edges]`, where `num_edges = num_parts - 1` is  

the\n * number of edges (parent-child pairs) in the tree. It contains  

the backward\n * displacements between consecutive part from the root towards the leaves.\n *\n * @param  

outputStride The output stride that was used when feed-forwarding\n * through the PoseNet model. Must be 32, 16,  

or 8.\n *\n * @param maxPoseDetections Maximum number of returned instance detections per\n * image.\n *\n *

```

```

@param scoreThreshold Only return instance detections that have root part\n * score greater or equal to this value.
Defaults to 0.5.\n * \n * @param nmsRadius Non-maximum suppression part distance. It needs to be\n * strictly
positive. Two parts suppress each other if they are less than\n * `nmsRadius` pixels away. Defaults to 20.\n * \n *

more accurate
 * the model at the cost of speed. Set this to a larger value to increase speed
 * at the cost of accuracy. Stride 32 is supported for ResNet and
 * stride 8,16,32 are supported for various MobileNetV1 models.
 * multiplier: An optional number with values: 1.01, 1.0, 0.75, or
 * 0.50. The value is used only by MobileNet architecture. It is the float
 * multiplier for the depth (number of channels) for all convolution ops.
 * The larger the value, the larger the size of the layers, and more accurate
 * the model at the cost of speed. Set this to a smaller value to increase speed
 * at the cost of accuracy.
 * modelUrl: An optional string that specifies custom url of the model. This
 * is useful for area/countries that don't have access to the model hosted on
 * GCP.
 * quantBytes: An optional number with values: 1, 2, or 4. This parameter
 * affects weight quantization in the models. The available options are
 * 1 byte, 2 bytes, and 4 bytes. The higher the value, the larger the model size
 * and thus the longer the loading time, the lower the value, the shorter the
 * loading time but lower the accuracy.

*/
**
* Multiple Person Instance Inference Config
*
* `maxDetections`:
Defaults to 10. Maximum number of returned instance segmentation and pose detections per image.
*
* `scoreThreshold`: Defaults to 0.4. Only returns and uses person poses for instance segmentation assignment
when the pose has root part score greater or equal to this value.
*
* `nmsRadius`: Defaults to 20. Non-
maximum suppression part distance in pixels. It needs to be strictly positive. Two parts suppress each other if
they are less than `nmsRadius` pixels away.
*
* `minKeypointScore`: Default to 0.3. Keypoints above the
score are used for matching and assigning segmentation mask to each person.
*
* `refineSteps`: Default to
10. The number of refinement steps used when assigning the instance segmentation. It needs to be strictly
positive. The larger the higher the accuracy and slower the inference.
*/

Given an image with many people, returns a PartSegmentation dictionary that contains the body part segmentation mask for all people and a single pose. Note: The body part segmentation mask returned by this method covers all people but the pose works well when there is one person. If you want to estimate instance-level multiple person body part segmentation & pose for each person, use `segmentMultiPersonParts` instead.

@param input ImageData|HTMLImageElement|HTMLCanvasElement|HTMLVideoElement The input image to feed through the network.

@param config PersonInferenceConfig object that contains parameters for the BodyPix inference using single person decoding.

@return A SemanticPartSegmentation dictionary that contains height, width, the flattened binary segmentation mask and the pose for the person. The width and height correspond to

- `height`: The height of the person part segmentation data in pixel unit.
- `width`: The width of the person part segmentation data in pixel unit.
- `data`: The flattened Int32Array of person part segmentation data with a part id from 0-24 for the pixels that are part of a corresponding body part, and -1 otherwise. The size of the array is equal to `height` x `width` in row-major order.
- `allPoses`: The 2d poses of all people.

from part scores and\n * displacement vectors. It returns up to `maxDetections` object instance\n * detections in
decreasing root score order. It works as follows: We first\n * create a priority
queue with local part score maxima above\n * `scoreThreshold`, considering all parts at the same time. Then we\n *
iteratively pull the top element of the queue (in decreasing score order)\n * and treat it as a root candidate for a new
object instance. To avoid\n * duplicate detections, we reject the root candidate if it is within a disk\n * of
`nmsRadius` pixels from the corresponding part of a previously detected\n * instance, which is a form of part-based

```

```

non-maximum suppression (NMS). If the root candidate passes the NMS check, we start a new object instance
detection, treating the corresponding part as root and finding the positions of the remaining parts by following
the displacement vectors along the tree-structured part graph. We assign to the newly detected instance a
score equal to the sum of scores of its parts which have not been claimed by a previous instance (i.e., those at
least nmsRadius pixels away from the corresponding part of all previously
detected instances), divided by the total number of parts numParts. The value of heatmapScores 3-D tensor
with shape [height, width, numParts] is the score of placing the k-th
object part at position (y, x). The value of offsets 3-D tensor with shape [height, width, numParts * 2]
The value of [offsets[y, x, k], offsets[y, x, k + numParts]] is the short range offset vector of the k-th
object part at heatmap position (y, x). The displacementsFwd 3-D tensor of shape [height, width, 2 *
num_edges], where num_edges = num_parts - 1 is the number of edges (parent-child pairs) in the tree. It
contains the forward displacements between consecutive part from the root towards the leaves. The
displacementsBwd 3-D tensor of shape [height, width, 2 * num_edges], where num_edges = num_parts - 1 is
the number of edges (parent-child pairs) in the tree. It contains
the backward displacements between consecutive part from the root towards the leaves.
outputStride The output stride that was used when feed-forwarding through the PoseNet model. Must be 32, 16,
or 8.
maxPoseDetections Maximum number of returned instance detections per image.
scoreThreshold Only return instance detections that have root part score greater or equal to this value.
Defaults to 0.5.
nmsRadius Non-maximum suppression part distance. It needs to be strictly
positive. Two parts suppress each other if they are less than nmsRadius pixels away. Defaults to 20.
return An array of poses and their scores, each containing keypoints and the corresponding keypoint scores.

`architecture`: BodyPixArchitecture. It determines which BodyPix
architecture\n * to load. The supported architectures are: MobileNetV1 and ResNet50.\n * `outputStride`:
Specifies the output stride of the BodyPix model.\n * The smaller the value, the larger the output resolution, and
more accurate\n * the model at the cost of speed. Set this to a larger value to increase speed\n * at the cost of
accuracy. Stride 32 is supported for ResNet and\n * stride 8,16,32 are supported for various MobileNetV1 models.\n
*\n * `multiplier`: An optional number with values: 1.01, 1.0, 0.75, or\n * 0.50. The value is used only by MobileNet
architecture. It is the float\n * multiplier for the depth (number of channels) for all convolution ops.\n * The larger
the value, the larger the size of the layers, and more accurate\n * the model at the cost of speed. Set this to a smaller
value to increase speed\n * at the cost of accuracy.\n *\n * `modelUrl`: An optional string that specifies custom url
of the model. This\n * is useful for area/countries that don't have access
to the model hosted on\n * GCP.\n *\n * `quantBytes`: An optional number with values: 1, 2, or 4. This
parameter\n * affects weight quantization in the models. The available options are\n * 1 byte, 2 bytes, and 4 bytes.
The higher the value, the larger the model size\n * and thus the longer the loading time, the lower the value, the
shorter the\n * loading time but lower the accuracy.\n */\nexport interface ModelConfig {\n architecture:

 /**
 * Given an image with many people, returns a dictionary containing: height, width, a tensor with a part id from 0-24 for the pixels that are part of a corresponding body part, and -1 otherwise. This does standard ImageNet pre-processing before inferring through the model. The image should pixels should have values [0-255].
 * @param input ImageData|HTMLImageElement|HTMLCanvasElement|HTMLVideoElement) The input image to feed through the network.
 * @param internalResolution Defaults to 'medium'. The internal resolution percentage that the input is resized to before inference. The larger the internalResolution the more accurate the model at the cost of slower prediction times. Available values are 'low', 'medium', 'high', 'full', or a

percentage value between 0 and 1. The values 'low', 'medium', 'high', and 'full' map to 0.25, 0.5, 0.75, and 1.0 correspondingly.

`@param segmentationThreshold` The minimum that segmentation values must have to be considered part of the person. Affects the clipping of the colored part image.

`@return` A dictionary

containing `partSegmentation`, `heatmapScores`, `offsets`, and `padding`.

`partSegmentation`: A 2d Tensor with a part id from 0-24 for the pixels that are part of a corresponding body part, and -1 otherwise.

`heatmapScores`: A 3d Tensor of the keypoint heatmaps used by single-person pose estimation decoding.

`offsets`: A 3d Tensor of the keypoint offsets used by single-person pose estimation decoding.

`displacementFwd`: A 3d Tensor of the keypoint forward displacement used by pose estimation decoding.

`displacementBwd`: A 3d Tensor of the keypoint backward displacement used by pose estimation decoding.

`padding`: The padding (unit pixels) being applied to the input image before it is fed into the model.

`segmentPersonPartsActivation`(`input: BodyPixInput`, `internalResolution: BodyPixInternalResolution`, `segmentationThreshold = 0.5`):

```
{
  partSegmentation: tf.Tensor2D,
  heatmapScores: tf.Tensor3D,
  offsets: tf.Tensor3D,
  displacementFwd: tf.Tensor3D,
  displacementBwd: tf.Tensor3D,
  padding: Padding,
  internalResolutionHeightAndWidth: [number, number]
}
const [height, width] = getInputSize(input);
const internalResolutionHeightAndWidth =
toInputResolutionHeightAndWidth(
  internalResolution, this.baseModel.outputStride, [height, width]);
const [resized, padding] = padAndResizeTo(input, internalResolutionHeightAndWidth);
const [partSegmentation, heatmapScores, offsets, displacementFwd, displacementBwd] =
tf.tidy(() => {
  const [segmentLogits, partHeatmapLogits, heatmapScores, offsets, displacementFwd, displacementBwd] =
this.predictForPersonSegmentationAndPart(resized);
  const [resizedHeight, resizedWidth] = resized.shape;
  const scaledSegmentScores =
scaleAndCropToInputTensorShape(
  segmentLogits, [height, width], [resizedHeight, resizedWidth],
[[padding.top, padding.bottom], [padding.left, padding.right]],
  APPLY_SIGMOID_ACTIVATION);
  const scaledPartHeatmapScore = scaleAndCropToInputTensorShape(
  partHeatmapLogits, [height, width],
[resizedHeight, resizedWidth],
[[padding.top, padding.bottom], [padding.left, padding.right]],
  APPLY_SIGMOID_ACTIVATION);
  const segmentation =
toMaskTensor(tf.squeeze(scaledSegmentScores), segmentationThreshold);
  return {
    partSegmentation:
decodePartSegmentation(segmentation, scaledPartHeatmapScore),
    heatmapScores,
    offsets,
    displacementFwd,
    displacementBwd,
  };
});
resized.dispose();
return {
  partSegmentation,
  heatmapScores,
  offsets,
  displacementFwd,
  displacementBwd,
  padding,
  internalResolutionHeightAndWidth
};
}
```

Given an image with many people, returns a `PartSegmentation` dictionary that contains the body part segmentation mask for all people and a single pose. Note: The body part segmentation mask returned by this method covers all people but the pose works well when there is one person. If you want to estimate instance-level multiple person body part segmentation & pose for each person, use

`segmentMultiPersonParts` instead.

`@param input`

`ImageData|HTMLImageElement|HTMLCanvasElement|HTMLVideoElement` The input image to feed through the network.

`@param config` `PersonInferenceConfig` object that contains parameters for the `BodyPix` inference using single person decoding.

`@return` A `SemanticPartSegmentation` dictionary that contains height, width, the flattened binary segmentation mask and the pose for the person. The width and height correspond to

the same dimensions of the input image.

`height`: The height of the person part segmentation data in pixel unit.

`width`: The width of the person part segmentation data in pixel unit.

`data`: The flattened `Int32Array` of person part segmentation data with a part id from 0-24 for the pixels that are part of a corresponding body part, and -1 otherwise. The size of the array is equal to `height` x `width` in row-major order.

`allPoses`: The 2d poses of all people.

by the corresponding binary segmentation value at the pixel from the output. In other words, pixels where there is a person will be colored with foreground color and where there is not a person will be colored with background color.

`@param personOrPartSegmentation` The output from `segmentPerson``, `segmentMultiPerson``, `segmentPersonParts`` or `segmentMultiPersonParts``. They can be `SemanticPersonSegmentation` object, an array of `PersonSegmentation` object, `SemanticPartSegmentation` object, or an array of `PartSegmentation` object.

`@param foreground` Default to `{r:0, g:0, b:0, a: 0}`. The foreground color `(r,g,b,a)` for visualizing pixels that belong to people.

`@param background` Default to `{r:0, g:0, b:0, a: 255}`. The background color `(r,g,b,a)` for visualizing pixels that don't belong to people.

`@param drawContour` Default to `false`. Whether to draw the contour around each person's segmentation mask or body part mask.

`@param foregroundIds` Default to `[1]`. The integer values that represent foreground. For person segmentation, 1 is the foreground. For body part segmentation, it can be a subset of all body parts ids.

`@returns` An `ImageData` with the same width and height of all the `PersonSegmentation` in `multiPersonSegmentation`, with opacity and transparency at each pixel determined by the corresponding binary segmentation value at the pixel from the output.

as root part candidate if its score is a
// maximum in a window |y - y'| <= kLocalMaximumRadius, |x - x'| <=
// kLocalMaximumRadius.
const kLocalMaximumRadius = 1;
// Detects multiple poses and finds their parts
from part scores and
// displacement vectors. It returns up to `maxDetections` object instance
// detections in
decreasing root score order. It works as follows: We first
// create
a priority queue with local part score maxima above
// `scoreThreshold`, considering all parts at the same time.
Then we
// iteratively pull the top element of the queue (in decreasing score order)
// and treat it as a root
candidate for a new object instance. To avoid
// duplicate detections, we reject the root candidate if it is within a
// disk
// of `nmsRadius` pixels from the corresponding part of a previously detected
// instance, which is a form of
part-based non-maximum suppression (NMS). If
// the root candidate passes the NMS check, we start a new object
instance
// detection, treating the corresponding part as root and finding the
// positions of the remaining parts by
following the displacement vectors
// along the tree-structured part graph. We assign to the newly detected
// instance a score equal to the sum of scores of its parts which have not
// been claimed by a previous instance (i.e.,
those at least `nmsRadius`
// pixels away from the corresponding part
of all previously detected
// instances), divided by the total number of parts `numParts`.
// @param
heatmapScores 3-D tensor with shape `[height, width, numParts]`.
// The value of heatmapScores[y, x, k] is the
score of placing the `k`-th
// object part at position `(y, x)`.
// @param offsets 3-D tensor with shape `[height,
width, numParts * 2]`.
// The value of [offsets[y, x, k], offsets[y, x, k + numParts]] is the
// short range offset
vector of the `k`-th
// object part at heatmap
// position `(y, x)`.
// @param displacementsFwd 3-D tensor of
shape
// `[height, width, 2 * num_edges]`, where `num_edges = num_parts - 1` is the
// number of edges (parent-child pairs) in the tree. It contains the forward
// displacements between consecutive part from the root towards the
leaves.
// @param displacementsBwd 3-D tensor of shape
// `[height, width, 2 * num_edges]`, where
`num_edges = num_parts - 1` is the
// number of edges (parent-child pairs) in the tree.
It contains the backward
// displacements between consecutive part from the root towards the leaves.
// @param outputStride The output stride that was used when feed-forwarding
// through the PoseNet model. Must
be 32, 16, or 8.
// @param maxPoseDetections Maximum number of returned instance detections per
// image.
// @param scoreThreshold Only return instance detections that have root part
// score greater or equal
to this value. Defaults to 0.5.
// @param nmsRadius Non-maximum suppression part distance. It needs to be
// strictly positive. Two parts suppress each other if they are less than
// `nmsRadius` pixels away. Defaults to 20.

false;\n\n/**\n * BodyPix model loading is configurable using the following config dictionary.\n *\n *
`architecture`: BodyPixArchitecture. It determines
which BodyPix architecture\n * to load. The supported architectures are: MobileNetV1 and ResNet50.\n *\n *
`outputStride`: Specifies the output stride of the BodyPix model.\n * The smaller the value, the larger the output
resolution, and more accurate\n * the model at the cost of speed. Set this to a larger value to increase speed\n *
at the cost of accuracy. Stride 32 is supported for ResNet and\n * stride 8,16,32 are supported for various MobileNetV1
models.\n *\n * `multiplier`: An optional number with values: 1.01, 1.0, 0.75, or\n * 0.50. The value is used only by
MobileNet architecture. It is the float\n * multiplier for the depth (number of channels) for all convolution ops.\n *
The larger the value, the larger the size of the layers, and more accurate\n * the model at the cost of speed. Set
this to a smaller value to increase speed\n * at the cost of accuracy.\n *\n * `modelUrl`: An optional string that
specifies
custom url of the model. This\n * is useful for area/countries that
don't have access to the model hosted on\n * GCP.\n *\n * `quantBytes`: An optional number with values: 1, 2, or 4.
This parameter\n * affects weight quantization in the models. The available options are\n * 1 byte, 2 bytes, and 4
bytes. The higher the value, the larger the model size\n * and thus the longer the loading time, the lower the value,
the shorter the\n * loading time but lower the accuracy.\n *\n * export interface ModelConfig {\n architecture:

```

config dictionary.

- `flipHorizontal`: If the left-right keypoint of poses/part segmentation should be flipped/mirrored horizontally. This should be set to true for videos where the video is by default flipped horizontally (i.e. a webcam), and you want the person & body part segmentation to be returned in the proper orientation.
- `internalResolution`: Defaults to 'medium'. The internal resolution percentage that the input is resized to before inference. The larger the internalResolution the more accurate the model at the cost of slower prediction times. Available values are 'low', 'medium', 'high', 'full', or a percentage value between 0 and 1. The values 'low', 'medium', 'high', and 'full' map to 0.25, 0.5, 0.75, and 1.0 correspondingly.
- `segmentationThreshold`: The minimum that segmentation values must have to be considered part of the person. Affects the generation of the segmentation mask. More specifically, it is

the threshold used to binarize the intermediate person segmentation probability. The probability of each pixel belongs to a person is in range [0, 1]. If the probability is greater than the `segmentationThreshold`, it will be set to 1 otherwise 0.

```
\nexport interface InferenceConfig {\n  flipHorizontal?: boolean;\n  internalResolution?: BodyPixInternalResolution;\n  segmentationThreshold?: number;\n}\n\n**\n * Person\n Inference Config\n * `maxDetections`: Defaults to 10. Maximum number of person pose detections per\n * image.\n * `scoreThreshold`: Defaults to 0.4. Only return person pose that have root\n * part score greater or\n * equal to this value.\n * `nmsRadius`: Defaults to 20. Non-maximum suppression part distance in pixels.\n * It\n * needs to be strictly positive. Two pose keypoints suppress each other if\n * they are less than `nmsRadius` pixels\n * away.\n * \nexport interface PersonInferenceConfig extends InferenceConfig {\n  maxDetections?: number;\n  scoreThreshold?:\n  number;\n  nmsRadius?: number;\n}\n\n**\n * Multiple Person Instance Inference Config\n * `maxDetections`: Defaults to 10. Maximum number of returned instance\n * segmentation and pose detections per image.\n * `scoreThreshold`: Defaults to 0.4. Only returns and uses person\n * poses for instance segmentation assignment\n * when the pose has root part score\n * greater or equal to this value.\n * `nmsRadius`: Defaults to 20. Non-\n * maximum suppression part distance in pixels.\n * It needs to be strictly positive. Two parts suppress each other if\n * they are\n * less than `nmsRadius` pixels away.\n * `minKeypointScore`: Default to 0.3. ```

Given an image with many people, returns a dictionary containing: height, width, a tensor with a part id from 0-24 for the pixels that are

* part of a corresponding body part, and -1 otherwise. This does standard ImageNet pre-processing before inferring through the model. The image should have values [0-255].
@param input ImageData|HTMLImageElement|HTMLCanvasElement|HTMLVideoElement) The input image to feed through the network.
@param internalResolution Defaults to 'medium'. The internal resolution percentage that the input is resized to before inference. The larger the internalResolution the more accurate the model at the cost of slower prediction times. Available values are 'low', 'medium', 'high', 'full', or a percentage value between 0 and 1. The values 'low', 'medium', 'high', and 'full' map to 0.25, 0.5, 0.75, and 1.0 correspondingly.
@param segmentationThreshold The minimum that segmentation values must have to be considered part of the person. Affects the clipping of the colored part image.

@return A dictionary containing `partSegmentation`, `heatmapScores`, `offsets`, and `padding`:
- `partSegmentation`: A 2d Tensor with a part id from 0-24 for the pixels that are part of a corresponding body part, and -1 otherwise.
- `heatmapScores`: A 3d Tensor of the keypoint heatmaps used by single-person pose estimation decoding.
- `offsets`: A 3d Tensor of the keypoint offsets used by single-person pose estimation decoding.
- `displacementFwd`: A 3d Tensor of the keypoint forward displacement used by pose estimation decoding.
- `displacementBwd`: A 3d Tensor of the keypoint backward displacement used by pose estimation decoding.
- `padding`: The padding (unit pixels) being applied to the input image before it is fed into the model.

 * If `Buffer.TYPED_ARRAY_SUPPORT` is true
 * Use Uint8Array implementation (fastest)
 * false Use Object implementation (most compatible, even
IE6)
 * Browsers
that support typed arrays are IE 10+, Firefox 4+, Chrome 7+, Safari 5.1+, Opera 11.6+, iOS 4.2+.
 * Due to
various browser bugs, sometimes the Object implementation will be used even when the browser supports typed
arrays.
 * Note:
 * - Firefox 4-29 lacks support for adding new properties to `Uint8Array` instances.
 * See:
https://bugzilla.mozilla.org/show\_bug.cgi?id=695438.
 * - Chrome 9-10 is missing the
`TypedArray.prototype.subarray` function.
 * - IE10 has a broken `TypedArray.prototype.subarray` function
which returns arrays of incorrect length in some situations.
 * We detect these buggy browsers and set
`Buffer.TYPED_ARRAY_SUPPORT` to `false` so they get the Object implementation, which is slower but
behaves correctly.
 *
 * Buffer.TYPED_ARRAY_SUPPORT = global.TYPED_ARRAY_SUPPORT !==
undefined
 ? global.TYPED_ARRAY_SUPPORT
 : typedArraySupport()
 * Export kMaxLength after
typed array support is determined.
 *
 * exports.kMaxLength = kMaxLength()
