```

containing successive accumulation values generated by applying [operation] from left to right to each element and current accumulator value that starts with [initial] value. Note that `acc` value passed to [operation] function should not be mutated; otherwise it would affect the previous value in resulting sequence. The [initial] value should also be immutable (or should not be mutated) as it may be passed to [operation] function later because of sequence's lazy nature.

@param [operation] function that takes current accumulator value and an element, and calculates the next accumulator value. The operation is `_intermediate_` and `_stateless_`.

@sample samples.collections.Collections.Aggregates.runningFold

```

*^@SinceKotlin("1.4")
public fun <T, R> Sequence<T>.runningFold(initial: R, operation: (acc: R, T) -> R):
Sequence<R> {
    return sequence {
        yield(initial)
        var accumulator = initial
        for (element in
this@runningFold) {
            accumulator = operation(accumulator, element)
            yield(accumulator)
        }
    }
}

```

Returns a sequence containing successive accumulation values generated by applying [operation] from left to right to each element, its index in the original sequence and current accumulator value that starts with [initial] value. Note that `acc` value passed to [operation] function should not be mutated; otherwise it would affect the previous value in resulting sequence. The [initial] value should also be immutable (or should not be mutated) as it may be passed to [operation] function later because of sequence's lazy nature.

@param [operation] function that takes the index of an element, current accumulator value and the element itself, and calculates the next accumulator value. The operation is `_intermediate_` and `_stateless_`.

@sample samples.collections.Collections.Aggregates.runningFoldIndexed

```

*^@SinceKotlin("1.4")
public fun
<T, R> Sequence<T>.runningFoldIndexed(initial: R, operation: (index: Int, acc: R, T) -> R): Sequence<R> {
    return sequence {
        yield(initial)
        var index = 0
        var accumulator = initial
        for (element in
this@runningFoldIndexed) {
            accumulator = operation(checkIndexOverflow(index++), accumulator,
element)
            yield(accumulator)
        }
    }
}

```

Returns a sequence containing successive accumulation values generated by applying [operation] from left to right to each element and current accumulator value that starts with the first element of this sequence. Note that `acc` value passed to [operation] function should not be mutated; otherwise it would affect the previous value in resulting sequence.

@param [operation] function that takes current accumulator value and the element, and calculates the next accumulator value. The operation is `_intermediate_` and `_stateless_`.

@sample samples.collections.Collections.Aggregates.runningReduce

```

*^@SinceKotlin("1.4")
@WasExperimental(ExperimentalStdlibApi::class)

    }
}

```

Returns a list containing the results of applying the given [transform] function to each character in the original char sequence.

@sample

```

samples.text.Strings.map

```

```

CharSequence.map(transform: (Char) -> R):
List<R> {
    return mapTo(ArrayList<R>(length), transform)
}

```

Returns a list containing the results of applying the given [transform] function to each character and its index in the original char sequence.

@param [transform] function that takes the index of a character and the character itself and returns the result of the transform applied to the character.

```

CharSequence.mapIndexed(transform: (index:
Int, Char) -> R): List<R> {
    return mapIndexedTo(ArrayList<R>(length), transform)
}

```

Returns a list containing only the non-null results of applying the given [transform] function to each character and its index in the original char sequence.

@param [transform] function that takes the index of a character and the character itself and returns the result of the transform applied to the character.

```

CharSequence.mapIndexedNotNull(transform: (index: Int, Char) -> R?): List<R> {
    return
    mapIndexedNotNullTo(ArrayList<R>(), transform)
}

```

Applies the given [transform] function to each character and its index in the original char sequence and appends only the non-null results to the given [destination].

@param [transform] function that takes the index of a character and the character itself and

returns the result of the transform applied to the character.

```

public inline fun <R : Any, C :
MutableCollection<in R>> CharSequence.mapIndexedNotNullTo(destination: C, transform: (index: Int, Char) ->
R?): C {
    for<in> indexed { index, element -> transform(index, element)?.let { destination.add(it) } }
    return destination
}

```

\* Applies the given [transform] function to each character and its index in the original char sequence and appends the results to the given [destination].

\* @param [transform] function that takes the index of a character and the character itself and returns the result of the transform applied to the character.

```

public inline fun <R, C : MutableCollection<in R>> CharSequence.mapIndexedTo(destination: C, transform:
(index: Int, Char) -> R): C {
    var index = 0
    for<in> (item in this) destination.add(transform(index++, item))
    return destination
}

```

\* Returns a list containing only the non-null results of applying the given [transform] function to each character in the original char sequence.

\* @sample samples.collections.Collections.Transformations.mapNotNull

```

public inline fun <R : Any> CharSequence.mapNotNull(transform: (Char) -> R?): List<R> {

```

```

UByteArray.none(predicate: (UByte) -> Boolean): Boolean {
    for (element in this) if (predicate(element)) return false
    return true
}

Returns `true` if no elements match the given [predicate].

@sample
samples.collections.Collections.Aggregates.noneWithPredicate

@SinceKotlin("1.3")
@ExperimentalUnsignedTypes
@kotlin.internal.InlineOnly
public inline fun
UShortArray.none(predicate: (UShort) -> Boolean): Boolean {
    for (element in this) if (predicate(element)) return false
    return true
}

Performs the given [action] on each element and returns the array itself afterwards.

@SinceKotlin("1.4")
@ExperimentalUnsignedTypes
@kotlin.internal.InlineOnly
public inline fun
UIntArray.forEach(action: (UInt) -> Unit): UIntArray {
    return apply { for (element in this) action(element) }
}

Performs the given [action] on each element and returns the array itself afterwards.

@SinceKotlin("1.4")
@ExperimentalUnsignedTypes
@kotlin.internal.InlineOnly
public inline fun
ULongArray.forEach(action: (ULong) -> Unit): ULongArray {
    return apply { for (element in this) action(element) }
}

Performs the given [action] on each element and returns the array itself afterwards.

@SinceKotlin("1.4")
@ExperimentalUnsignedTypes
@kotlin.internal.InlineOnly
public inline fun
UByteArray.forEach(action: (UByte) -> Unit): UByteArray {
    return apply { for (element in this) action(element) }
}

Performs the given [action] on each element and returns the array itself afterwards.

@SinceKotlin("1.4")
@ExperimentalUnsignedTypes
@kotlin.internal.InlineOnly
public inline fun
UShortArray.forEach(action: (UShort) -> Unit): UShortArray {
    return apply { for (element in this) action(element) }
}

Performs the given [action] on each element, providing sequential index with the element,
and returns the array itself afterwards.

@param [action] function that takes the index of an element and the element itself
and performs the action on the element.

@SinceKotlin("1.4")

    EXPRESSION,
    /** File
    FILE,
    /** Type alias
    TYPEALIAS
}

```

`@SinceKotlin("1.1")` Contains the list of possible annotation's retentions. Determines how an annotation is stored in binary output.

```

public enum class AnnotationRetention {
    /** Annotation isn't stored in binary output
    SOURCE,
    /** Annotation is stored in binary output, but invisible for reflection
    BINARY,
    /** Annotation is stored in binary output and visible for reflection (default retention)
    RUNTIME
}

```

This meta-annotation indicates the kinds of code elements which are possible targets of an annotation. If the target meta-annotation is not present on an annotation declaration, the annotation is applicable to the following elements: [CLASS], [PROPERTY], [FIELD], [LOCAL\_VARIABLE], [VALUE\_PARAMETER], [CONSTRUCTOR], [FUNCTION], [PROPERTY\_GETTER], [PROPERTY\_SETTER].

`@property allowedTargets` list of allowed annotation targets

```

@Target(AnnotationTarget.ANNOTATION_CLASS)
@MustBeDocumented
public annotation class Target(
    vararg val allowedTargets: AnnotationTarget
)

```

This meta-annotation determines whether an annotation is stored in binary output and visible for reflection. By default, both are true.

`@property value necessary annotation retention (RUNTIME, BINARY or SOURCE)`

```

@Target(AnnotationTarget.ANNOTATION_CLASS)
public annotation class Retention(
    val value: AnnotationRetention = AnnotationRetention.RUNTIME
)

```

This meta-annotation determines that an annotation is applicable twice or more on a single code element

```

@Target(AnnotationTarget.ANNOTATION_CLASS)
public annotation class Repeatable

```

This meta-annotation determines that an annotation is a part of public API and therefore should be included in the generated documentation for the element to which the annotation is applied.

```

@Target(AnnotationTarget.ANNOTATION_CLASS)
public annotation class MustBeDocumented

```

```

package kotlin.internal

```

Specifies that the corresponding type parameter is not used for unsafe operations such as casts or 'is' checks. That means it's completely safe to use generic types as argument for such parameter.

```

@Target(AnnotationTarget.TYPE_PARAMETER)
@Retention(AnnotationRetention.BINARY)
internal annotation class PureReifiable

```

Specifies that the corresponding built-in method exists depending on platform. Current implementation for JVM looks whether method with same JVM descriptor exists in the module JDK. For example `MutableMap.remove(K, V)` available only if corresponding method `'java.util.Map.remove(Ljava/lang/Object;Ljava/lang/Object;)Z'` is defined in JDK (i.e. for major versions  $\geq 8$ )

```

@Target(AnnotationTarget.FUNCTION)
@Retention(AnnotationRetention.BINARY)
internal annotation class PlatformDependent

```

kotlin.js\n\nimport kotlin.annotation.AnnotationTarget.*\n\n@Target(FUNCTION)\n@Deprecated("Use inline
extension function with body using dynamic")\npublic annotation class
nativeGetter\n\n@Target(FUNCTION)\n@Deprecated("Use inline extension function with body using
dynamic")\npublic annotation class nativeSetter\n\n@Target(FUNCTION)\n@Deprecated("Use inline extension
function with body using dynamic")\npublic annotation class nativeInvoke\n\n@Target(CLASS, FUNCTION,
PROPERTY)\n@internal annotation class library(public val name: String = "")\n\n@Target(CLASS)\n@internal
annotation class marker\n\n/**\n * Gives a declaration (a function, a property or a class) specific name in
JavaScript.\n */\n * This may be useful in the following cases:\n * * There are two functions for which the
compiler gives same name in JavaScript, you can\n * mark one with `@JsName(...)` to prevent the compiler from
reporting error.\n * * You are writing a JavaScript library in Kotlin. The compiler produces mangled names\n *
for functions with parameters, which is unnatural for usual JavaScript developer.\n * You can put `@JsName(...)`
on functions you want to be available from JavaScript.\n * * For some reason you want to rename declaration, e.g.
there's common term in JavaScript\n * for a concept provided by the declaration, which is uncommon in Kotlin.\n
*/\n * Example:\n * ```\n kotlin\n * class Person(val name: String) {\n *     fun hello() {\n *         println("Hello
$name!")\n *     }\n *     @JsName("helloWithGreeting")\n *     fun hello(greeting: String) {\n *
println(" $greeting $name!")\n *     }\n * }\n * ```\n */\n * @property name the name which compiler uses both for

```

declaration itself and for all references to the declaration.

It's required to denote a valid JavaScript identifier.

`@Retention(AnnotationRetention.BINARY)`  
`@Target(CLASS, FUNCTION, PROPERTY, CONSTRUCTOR, PROPERTY_GETTER, PROPERTY_SETTER)`  
 public actual annotation class JsName(actual val name: String)

Denotes an `external` declaration that must be imported from native JavaScript library.

The compiler produces the code relevant for the target module system, for example, in case of CommonJS, it will import the declaration via the `require(...)` function.

The annotation can be used on top-level external declarations (classes, properties, functions) and files.

In case of file (which can't be `external`) the following rule applies: all the declarations in the file must be `external`. By applying `@JsModule(...)` on a file you tell the compiler to import a JavaScript object that contain all the declarations from the file.

Example:

```
kotlin
@JsModule("jquery")
external abstract class JQuery() {
    // some declarations here
}
@JsModule("jquery")
external fun JQuery(element: Element): JQuery
@property import name of a module to import declaration from.
```

It is not interpreted by the Kotlin compiler, it's passed as is directly to the target module system.

`@see JsNonModule`

`@Retention(AnnotationRetention.BINARY)`  
`@Target(CLASS, PROPERTY, FUNCTION, FILE)`  
 public annotation class JsModule(val import: String)

Denotes an `external` declaration that can be used without module system.

By default, an `external` declaration is available regardless your target module system.

However, by applying [JsModule] annotation you can make a declaration unavailable to `plain` module system.

Some JavaScript libraries are distributed both as a standalone downloadable piece of JavaScript and as a module available as an npm package.

To tell the Kotlin compiler to accept both cases, you can augment [JsModule] with the `@JsNonModule` annotation.

For example:

```
kotlin
@JsModule("jquery")
@JsNonModule
@JsName("$")
external abstract class JQuery() {
    // some declarations here
}
@JsModule("jquery")
@JsNonModule
@JsName("$")
external fun JQuery(element: Element): JQuery
@see JsModule
```

`@Retention(AnnotationRetention.BINARY)`  
`@Target(CLASS, PROPERTY, FUNCTION, FILE)`  
 public annotation class JsNonModule

Adds prefix to `external` declarations in a source file.

JavaScript does not have concept of packages (namespaces). They are usually emulated by nested objects.

The compiler turns references to `external` declarations either to plain unprefix names (in case of `plain` modules) or to plain imports.

However, if a JavaScript library provides its declarations in packages, you won't be satisfied with this.

You can tell the compiler to generate additional prefix before references to `external` declarations using the `@JsQualifier(...)` annotation.

Note that a file marked with the `@JsQualifier(...)` annotation can't contain non-`external` declarations.

Example:

```
@file:JsQualifier("my.jsPackageName")
package some.kotlinPackage
external fun foo(x: Int)
external fun bar(): String
@property value the qualifier to add to the declarations in the generated code.
```

It must be a sequence of valid JavaScript identifiers separated by the `.` character.

Examples of valid qualifiers are: `foo`, `bar.Baz`, `\_.\$.f`.

`@see JsModule`

`@Retention(AnnotationRetention.BINARY)`  
`@Target(AnnotationTarget.FILE)`  
 public annotation class JsQualifier(val value: String)

Exports top-level declaration on JS platform.

Compiled module exposes declarations that are marked with this annotation without name mangling.

This annotation can be applied to either files or top-level declarations.

It is currently prohibited to export the following kinds of declarations:

- expect declarations
- inline functions with reified type parameters
- suspend functions
- secondary constructors without `@JsName`
- extension properties
- enum classes
- annotation classes

Signatures of exported declarations must only contain `exportable` types:

- dynamic
- Any
- String
- Boolean
- Byte
- Short
- Int
- Float
- Double
- BooleanArray
- ByteArray
- ShortArray
- IntArray
- FloatArray
- DoubleArray
- Array<exportable-type>
- Function types with exportable parameters and return types
- external or @JsExport classes and interfaces
- Nullable counterparts of types above
- Unit return type. Must not be nullable

This annotation is experimental, meaning that restrictions mentioned above are subject to change.

`@ExperimentalJsExport`  
`@Retention(AnnotationRetention.BINARY)`  
`@Target(CLASS, PROPERTY, FUNCTION, FILE)`  
`@SinceKotlin("1.3")`

value is positive `y` such that  $\cosh(y) == x$ .  
Special cases:  
-  $\text{acosh}(\text{NaN})$  is  $\text{NaN}$   
-  $\text{acosh}(x)$  is  $\text{NaN}$  when  $x < 1$   
-  $\text{acosh}(+\text{Inf})$  is  $+\text{Inf}$   
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun acosh(x: Double): Double = nativeMath.acosh(x)  
Computes the inverse hyperbolic tangent of the value [x].  
The returned value is `y` such that  $\tanh(y) == x$ .  
Special cases:  
-  $\text{tanh}(\text{NaN})$  is  $\text{NaN}$   
-  $\text{tanh}(x)$  is  $\text{NaN}$  when  $x > 1$  or  $x < -1$   
-  $\text{tanh}(1.0)$  is  $+\text{Inf}$   
-  $\text{tanh}(-1.0)$  is  $-\text{Inf}$   
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun atanh(x: Double): Double = nativeMath.atanh(x)  
Computes  $\sqrt{x^2 + y^2}$  without intermediate overflow or underflow.  
Special cases:  
- returns  $+\text{Inf}$  if any of arguments is infinite  
- returns  $\text{NaN}$  if any of arguments is  $\text{NaN}$  and the other is not infinite  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun hypot(x: Double, y: Double): Double = nativeMath.hypot(x, y)  
Computes the positive square root of the value [x].  
Special cases:  
-  $\sqrt{x}$  is  $\text{NaN}$  when  $x < 0$  or  $x$  is  $\text{NaN}$   
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun sqrt(x: Double): Double = nativeMath.sqrt(x)  
Computes Euler's number `e` raised to the power of the value [x].  
Special cases:  
-  $\text{exp}(\text{NaN})$  is  $\text{NaN}$   
-  $\text{exp}(+\text{Inf})$  is  $+\text{Inf}$   
-  $\text{exp}(-\text{Inf})$  is  $0.0$   
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun exp(x: Double): Double = nativeMath.exp(x)  
Computes  $\exp(x) - 1$ .  
This function can be implemented to produce more precise result for [x] near zero.  
Special cases:  
-  $\text{expm1}(\text{NaN})$  is  $\text{NaN}$   
-  $\text{expm1}(+\text{Inf})$  is  $+\text{Inf}$   
-  $\text{expm1}(-\text{Inf})$  is  $-1.0$   
@see [exp] function.  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun expm1(x: Double): Double = nativeMath.expm1(x)  
Computes the logarithm of the value [x] to the given [base].  
Special cases:  
-  $\log(x, b)$  is  $\text{NaN}$  if either `x` or `b` are  $\text{NaN}$   
-  $\log(x, b)$  is  $\text{NaN}$  when  $x < 0$  or  $b \leq 0$  or  $b == 1.0$   
-  $\log(+\text{Inf}, +\text{Inf})$  is  $\text{NaN}$   
-  $\log(+\text{Inf}, b)$  is  $+\text{Inf}$  for  $b > 1$  and  $-\text{Inf}$  for  $b < 1$   
-  $\log(0.0, b)$  is  $-\text{Inf}$  for  $b > 1$  and  $+\text{Inf}$  for  $b > 1$   
See also logarithm functions for common fixed bases: [ln], [log10] and [log2].  
@SinceKotlin("1.2")@InlineOnly\npublic actual fun log(x: Double, base: Double): Double {  
if (base <= 0.0 || base == 1.0) return Double.NaN  
return nativeMath.log(x) / nativeMath.log(base)  
}
Computes the natural logarithm (base `E`) of the value [x].  
Special cases:  
-  $\ln(\text{NaN})$  is  $\text{NaN}$   
-  $\ln(x)$  is  $\text{NaN}$  when  $x < 0.0$   
-  $\ln(+\text{Inf})$  is  $+\text{Inf}$   
-  $\ln(0.0)$  is  $-\text{Inf}$   
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun ln(x: Double): Double = nativeMath.log(x)  
Computes the common logarithm (base 10) of the value [x].  
@see [ln] function for special cases.  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun log10(x: Double): Double = nativeMath.log10(x)  
Computes the binary logarithm (base 2) of the value [x].  
@see [ln] function for special cases.  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun log2(x: Double): Double = nativeMath.log2(x)  
Computes  $\ln(x + 1)$ .  
This function can be implemented to produce more precise result for [x] near zero.  
Special cases:  
-  $\ln1p(\text{NaN})$  is  $\text{NaN}$   
-  $\ln1p(x)$  is  $\text{NaN}$  where  $x < -1.0$   
-  $\ln1p(-1.0)$  is  $-\text{Inf}$   
-  $\ln1p(+\text{Inf})$  is  $+\text{Inf}$   
@see [ln] function  
@see [expm1] function  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun ln1p(x: Double): Double = nativeMath.log1p(x)  
Rounds the given value [x] to an integer towards positive infinity.  
@return the smallest double value that is greater than or equal to the given value [x] and is a mathematical integer.  
Special cases:  
-  $\text{ceil}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun ceil(x: Double): Double = nativeMath.ceil(x)  
Rounds the given value [x] to an integer towards negative infinity.  
@return the largest double value that is smaller than or equal to the given value [x] and is a mathematical integer.  
Special cases:  
-  $\text{floor}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun floor(x: Double): Double = nativeMath.floor(x)  
Rounds the given value [x] to an integer towards zero.  
@return the value [x] having its fractional part truncated.  
Special cases:  
-  $\text{truncate}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.  
@SinceKotlin("1.2")@InlineOnly\npublic actual inline fun truncate(x: Double): Double = nativeMath.trunc(x)  
Rounds the given value [x] towards the closest integer with ties rounded towards even integer.  
Special cases:  
-  $\text{round}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or

 \* \*  $\text{acosh}(+\text{Inf})$  is  $+\text{Inf}$   
 \* \* @SinceKotlin("1.2")  
 \* @InlineOnly  
 \* public actual inline fun acosh(x: Float): Float =

`nativeMath.acosh(x.toDouble()).toFloat()` Computes the inverse hyperbolic tangent of the value [x].  
 \* The returned value is `y` such that  $\tanh(y) = x$ .  
 \* Special cases:  
 -  $\tanh(\text{NaN})$  is  $\text{NaN}$   
 -  $\tanh(x)$  is  $\text{NaN}$  when  $x > 1$  or  $x < -1$   
 -  $\tanh(1.0)$  is  $+\text{Inf}$   
 -  $\tanh(-1.0)$  is  $-\text{Inf}$

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun atanh(x: Float): Float =`  
`nativeMath.atanh(x.toDouble()).toFloat()` Computes  $\sqrt{x^2 + y^2}$  without intermediate overflow or underflow.  
 \* Special cases:  
 - returns  $+\text{Inf}$  if any of arguments is infinite  
 - returns  $\text{NaN}$  if any of arguments is  $\text{NaN}$  and the other is not infinite

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun hypot(x: Float, y: Float): Float =`  
`nativeMath.hypot(x.toDouble(), y.toDouble()).toFloat()` Computes the positive square root of the value [x].  
 \* Special cases:  
 -  $\sqrt{x}$  is  $\text{NaN}$  when  $x < 0$  or  $x$  is  $\text{NaN}$

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun sqrt(x: Float): Float =`  
`nativeMath.sqrt(x.toDouble()).toFloat()` Computes Euler's number `e` raised to the power of the value [x].  
 \* Special cases:  
 -  $\exp(\text{NaN})$  is  $\text{NaN}$   
 -  $\exp(+\text{Inf})$  is  $+\text{Inf}$   
 -  $\exp(-\text{Inf})$  is  $0.0$

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun exp(x: Float): Float =`  
`nativeMath.exp(x.toDouble()).toFloat()` Computes  $\exp(x) - 1$ .  
 \* This function can be implemented to produce more precise result for [x] near zero.  
 \* Special cases:  
 -  $\expm1(\text{NaN})$  is  $\text{NaN}$   
 -  $\expm1(+\text{Inf})$  is  $+\text{Inf}$   
 -  $\expm1(-\text{Inf})$  is  $-1.0$   
 \* @see [exp] function.

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun expm1(x: Float): Float =`  
`nativeMath.expm1(x.toDouble()).toFloat()` Computes the logarithm of the value [x] to the given [base].  
 \* Special cases:  
 -  $\log(x, b)$  is  $\text{NaN}$  if either `x` or `b` are  $\text{NaN}$   
 -  $\log(x, b)$  is  $\text{NaN}$  when  $x < 0$  or  $b \leq 0$  or  $b = 1.0$   
 -  $\log(+\text{Inf}, +\text{Inf})$  is  $\text{NaN}$   
 -  $\log(+\text{Inf}, b)$  is  $+\text{Inf}$  for  $b > 1$  and  $-\text{Inf}$  for  $b < 1$   
 -  $\log(0.0, b)$  is  $-\text{Inf}$  for  $b > 1$  and  $+\text{Inf}$  for  $b > 1$   
 \* See also logarithm functions for common fixed bases: [ln], [log10] and [log2].

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun log(x: Float, base: Float): Float =`  
`log(x.toDouble(), base.toDouble()).toFloat()` Computes the natural logarithm (base `E`) of the value [x].  
 \* Special cases:  
 -  $\ln(\text{NaN})$  is  $\text{NaN}$   
 -  $\ln(x)$  is  $\text{NaN}$  when  $x < 0.0$   
 -  $\ln(+\text{Inf})$  is  $+\text{Inf}$   
 -  $\ln(0.0)$  is  $-\text{Inf}$

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun ln(x: Float): Float =`  
`nativeMath.log(x.toDouble()).toFloat()` Computes the common logarithm (base 10) of the value [x].  
 \* @see [ln] function for special cases.

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun log10(x: Float): Float =`  
`nativeMath.log10(x.toDouble()).toFloat()` Computes the binary logarithm (base 2) of the value [x].  
 \* @see [ln] function for special cases.

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun log2(x: Float): Float =`  
`nativeMath.log2(x.toDouble()).toFloat()` Computes  $\ln(a + 1)$ .  
 \* This function can be implemented to produce more precise result for [x] near zero.  
 \* Special cases:  
 -  $\ln1p(\text{NaN})$  is  $\text{NaN}$   
 -  $\ln1p(x)$  is  $\text{NaN}$  where  $x < -1.0$   
 -  $\ln1p(-1.0)$  is  $-\text{Inf}$   
 -  $\ln1p(+\text{Inf})$  is  $+\text{Inf}$   
 \* @see [ln] function  
 \* @see [expm1] function

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun ln1p(x: Float): Float =`  
`nativeMath.log1p(x.toDouble()).toFloat()` Rounds the given value [x] to an integer towards positive infinity.  
 \* @return the smallest Float value that is greater than or equal to the given value [x] and is a mathematical integer.  
 \* Special cases:  
 -  $\text{ceil}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun ceil(x: Float): Float =`  
`nativeMath.ceil(x.toDouble()).toFloat()` Rounds the given value [x] to an integer towards negative infinity.  
 \* @return the largest Float value that is smaller than or equal to the given value [x] and is a mathematical integer.  
 \* Special cases:  
 -  $\text{floor}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun floor(x: Float): Float =`  
`nativeMath.floor(x.toDouble()).toFloat()` Rounds the given value [x] to an integer towards zero.  
 \* @return the value [x] having its fractional part truncated.  
 \* Special cases:  
 -  $\text{truncate}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.

`@SinceKotlin("1.2")@InlineOnly@public actual inline fun truncate(x: Float): Float =`  
`truncate(x.toDouble()).toFloat()` Rounds the given value [x] towards the closest integer with ties rounded towards even integer.  
 \* Special cases:  
 -  $\text{round}(x)$  is  $x$  where  $x$  is  $\text{NaN}$  or  $+\text{Inf}$  or  $-\text{Inf}$  or already a mathematical integer.

```

this

`Int.rotateLeft(bitCount: Int): Int` = `shl(bitCount)` or `ushr(Int.SIZE_BITS - bitCount)`

Rotates the binary representation of this [Int] number left by the specified [bitCount] number of bits. The most significant bits pushed out from the left side reenter the number as the least significant bits on the right side. Rotating the number left by a negative bit count is the same as rotating it right by the negated bit count: `number.rotateLeft(-n) == number.rotateRight(n)`

Rotating by a multiple of [Int.SIZE\_BITS] (32) returns the same number, or more generally `number.rotateLeft(n) == number.rotateLeft(n % 32)`

`Int.rotateRight(bitCount: Int): Int` = `shl(Int.SIZE_BITS - bitCount)` or `ushr(bitCount)`

Rotates the binary representation of this [Int] number right by the specified [bitCount] number of bits. The least significant bits pushed out from the right side reenter the number as the most significant bits on the left side. Rotating the number right by a negative bit count is the same as rotating it left by the negated bit count: `number.rotateRight(-n) == number.rotateLeft(n)`

Rotating by a multiple of [Int.SIZE\_BITS] (32) returns the same number, or more generally `number.rotateRight(n) == number.rotateRight(n % 32)`

`Long.countOneBits(): Int` = `high.countOneBits() + low.countOneBits()`

Counts the number of consecutive most significant bits that are zero in the binary representation of this [Long] number.

`Long.countLeadingZeroBits(): Int` = `when (val high = this.high) { 0 -> Int.SIZE_BITS + low.countLeadingZeroBits() } else -> high.countLeadingZeroBits()`

Counts the number of consecutive least significant bits that are zero in the binary representation of this [Long] number.

`Long.countTrailingZeroBits(): Int` = `when (val low = this.low) { 0 -> Int.SIZE_BITS + high.countTrailingZeroBits() } else -> low.countTrailingZeroBits()`

Returns a number having a single bit set in the position of the most significant set bit of this [Long] number, or zero, if this number is zero.

`Long.takeHighestOneBit(): Long` = `when (val high = this.high) { 0 -> Long(low.takeHighestOneBit(), 0) } else -> Long(0, high.takeHighestOneBit())`

Returns a number having a single bit set in the position of the least significant set bit of this [Long] number, or zero, if this number is zero.

`Long.takeLowestOneBit(): Long` = `when (val low = this.low) { 0 -> Long(0, high.takeLowestOneBit()) } else -> Long(low.takeLowestOneBit(), 0)`

Rotates the binary representation of this [Long] number left by the specified [bitCount] number of bits. The most significant bits pushed out from the left side reenter the number as the least significant bits on the right side. Rotating the number left by a negative bit count is the same as rotating it right by the negated bit count: `number.rotateLeft(-n) == number.rotateRight(n)`

Rotating by a multiple of [Long.SIZE\_BITS] (64) returns the same number, or more generally `number.rotateLeft(n) == number.rotateLeft(n % 64)`

`Long.rotateLeft(bitCount: Int): Long` = `if ((bitCount and 31) != 0) { val low = this.low; val high = this.high; val newLow = low.shl(bitCount) or high.ushr(-bitCount); val newHigh = high.shl(bitCount) or low.ushr(-bitCount); return if ((bitCount and 32) == 0) Long(newLow, newHigh) else Long(newHigh, newLow) } else { return if ((bitCount and 32) == 0) this else Long(high, low) }`

Rotates the binary representation of this [Long] number right by the specified [bitCount] number of bits. The least significant bits pushed out from the right side reenter the number as the most significant bits on the left side. Rotating the number right by a negative bit count is the same as rotating it left by the negated bit count: `number.rotateRight(-n) == number.rotateLeft(n)`

Rotating by a multiple of [Long.SIZE\_BITS] (64) returns the same number, or more generally `number.rotateRight(n) == number.rotateRight(n % 64)`

kotlin.experimental.ExperimentalTypeInference\n\n/**\n * Allows to infer generic type arguments of a function
from the calls in the annotated function parameter of that function.\n *\n * When this annotation is placed on a
generic function parameter of a function,\n * it enables to infer the type arguments of that generic function from the
lambda body passed to that parameter.\n *\n * The calls that affect inference are either members of the receiver type
of an annotated function parameter or\n * extensions for that type. The extensions must be themselves annotated
with `@BuilderInference`. \n *\n * Example: we declare\n * ``\n * fun <T> sequence(@BuilderInference block:
suspend SequenceScope<T>().() -> Unit): Sequence<T>\n * ``\n * and use it like\n * ``\n * val result = sequence {

```

yield("result") } }  
 Here the type argument of the resulting sequence is inferred to `String` from the argument of the [SequenceScope.yield] function, that is called inside the lambda passed to [sequence].  
 Note: this annotation is experimental, see [ExperimentalTypeInference] on how to opt-in for it.

```

@Target(VALUE_PARAMETER, FUNCTION,
PROPERTY)
@Retention(AnnotationRetention.BINARY)

@ExperimentalTypeInference
public annotation class BuilderInference
  * Enables overload selection based on the type of the value returned from lambda argument.
  * When two or more function overloads have otherwise the same parameter lists that differ only in the return type of a functional parameter, this annotation enables overload selection by the type of the value returned from the lambda function passed to this functional parameter.
  * Example:
  * @OverloadResolutionByLambdaReturnType
  * fun create(intProducer: () -> Int): Int
  * fun create(doubleProducer: () -> Double): Double
  * val newValue = create { 3.14 }
  * The annotation being applied to one of overloads allows to resolve this ambiguity by analyzing what value is returned from the lambda function.
  * This annotation is also used to discriminate the annotated overloads in case if overload selection still cannot choose one of them even taking in account the result of lambda parameter analysis. In that case a warning is reported.
  * Note: this annotation is experimental, see [ExperimentalTypeInference] on how to opt-in for it.

kotlin.internal.InlineOnly\n\n/**\n * Obtains the current continuation instance inside suspend functions and either
suspends\n * currently running coroutine or returns result immediately without suspension.\n * If the [block]

```

returns the special [COROUTINE\_SUSPENDED] value, it means that suspend function did suspend the execution and will not return any result immediately. In this case, the [Continuation] provided to the [block] shall be resumed by invoking [Continuation.resumeWith] at some moment in the future when the result becomes available to resume the computation. Otherwise, the return value of the [block] must have a type assignable to [T] and represents the result of this suspend function. It means that the execution was not suspended and the [Continuation] provided to the [block] shall not be invoked. As the result type of the [block] is declared as `Any?` and cannot be correctly type-checked, its proper return type remains on the conscience of the suspend function's author. Invocation of [Continuation.resumeWith] resumes coroutine directly in the invoker's thread without going through the [ContinuationInterceptor] that might be present in the coroutine's [CoroutineContext]. It is the invoker's responsibility to ensure that a proper invocation context is established. [Continuation.intercepted] can be used to acquire the intercepted continuation. Note that it is not recommended to call either [Continuation.resume] nor [Continuation.resumeWithException] functions synchronously in the same stackframe where suspension function is run. Use [suspendCoroutine] as a safer way to obtain current continuation instance.

`package kotlin.reflect`

Represents variance applied to a type parameter on the declaration site (\*declaration-site variance\*), or to a type in a projection (\*use-site variance\*).

See the [Kotlin language documentation](https://kotlinlang.org/docs/reference/generics.html#variance) for more information.

See [KTypeParameter.variance] and [KTypeProjection].

Since Kotlin 1.1

enum class KVariance {

    \* The affected type parameter or type is \*invariant\*, which means it has no variance applied to it.

    INVARIENT,

    \* The affected type parameter or type is \*contravariant\*. Denoted by the `in` modifier in the source code.

    IN,

    \* The affected type parameter or type is \*covariant\*. Denoted by the `out` modifier in the source code.

    OUT,

},

Copyright 2010-2019 JetBrains s.r.o. and Kotlin Programming Language contributors. Use of this source code is governed by the Apache 2.0 license that can be found in the license/LICENSE.txt file.

Returns a runtime representation of the given reified type [T] as an instance of [KType]. Note that on JVM, the created type has no annotations ([KType.annotations] returns an empty list) even if the type in the source code is annotated. Support for type annotations might be added in a future version.

Since Kotlin 1.6

WasExperimental(ExperimentalStdlibApi::class)

public inline fun <reified T> typeOf(): KType = throw UnsupportedOperationException("This function is implemented as an intrinsic on all supported platforms.")

kotlin\n\nimport kotlin.coroutines.*\nimport kotlin.coroutines.intrinsics.*\nimport
kotlin.native.concurrent.SharedImmutable\n\n/**\n * Defines deep recursive function that keeps its stack on the
heap,\n * which allows very deep recursive computations that do not use the actual call stack.\n * To initiate a call to
this deep recursive function use its [invoke] function.\n * As a rule of thumb, it should be used if recursion goes
deeper than a thousand calls.\n *\n * The [DeepRecursiveFunction] takes one parameter of type [T] and returns a
result of type [R].\n * The [block] of code defines the body of a recursive function. In this block\n *
[callRecursive][DeepRecursiveScope.callRecursive] function can be used to make a recursive call\n * to the
declared function. Other instances of [DeepRecursiveFunction] can be called\n * in this scope with `callRecursive`
extension, too.\n *\n * For example, take a look at the following recursive tree class and a deeply\n * recursive
instance of this tree with 100K nodes:\n *\n * ```\n * class Tree(val left: Tree? = null, val right: Tree? = null)\n * val
deepTree = generateSequence(Tree()) { Tree(it) }.take(100_000).last()\n * ```\n *\n * A regular recursive function
can be defined to compute a depth of a tree:\n *\n * ```\n * fun depth(t: Tree?): Int =\n *     if (t == null) 0 else
max(depth(t.left), depth(t.right)) + 1\n * println(depth(deepTree)) // StackOverflowError\n * ```\n *\n * If this
`depth` function is called for a `deepTree` it produces [StackOverflowError] because of deep recursion.\n *
However, the `depth` function can be rewritten using `DeepRecursiveFunction` in the following way, and then\n * it
successfully computes [depth(deepTree)][DeepRecursiveFunction.invoke] expression:\n *\n * ```\n * val depth =
DeepRecursiveFunction<Tree?, Int> { t ->\n *     if (t == null) 0 else max(callRecursive(t.left),
callRecursive(t.right)) + 1\n * }\n * println(depth(deepTree)) // Ok\n * ```\n *\n * Deep recursive functions can also
mutually call each other using a heap for the stack via\n * [callRecursive][DeepRecursiveScope.callRecursive]
extension. For example, the\n * following pair of mutually recursive functions computes the number of tree nodes at
even depth in the tree.\n *\n * ```\n * val mutualRecursion = object {\n *     val even:
DeepRecursiveFunction<Tree?, Int> = DeepRecursiveFunction { t ->\n *         if (t == null) 0 else
odd.callRecursive(t.left) + odd.callRecursive(t.right) + 1\n *     }\n *     val odd: DeepRecursiveFunction<Tree?,
Int> = DeepRecursiveFunction { t ->\n *         if (t == null) 0 else even.callRecursive(t.left) +
even.callRecursive(t.right)\n *     }\n * }\n * ```\n *\n * @param [T] the function parameter type.\n * @param [R]
the function result type.\n * @param block the function body.\n
*\n@SinceKotlin("1.4")\n@ExperimentalStdlibApi\npublic class DeepRecursiveFunction<T, R>(\n    internal val

```

`Inf)` is `NaN`.  
`@SinceKotlin("1.2")` public expect fun `tan(x: Double): Double`.  
 Computes the arc sine of the value `[x]`; the returned value is an angle in the range from `-PI/2` to `PI/2` radians.  
 Special cases:  
 - `asin(x)` is `NaN`, when `abs(x) > 1` or `x` is `NaN`.  
`@SinceKotlin("1.2")` public expect fun `asin(x: Double): Double`.  
 Computes the arc cosine of the value `[x]`; the returned value is an angle in the range from `0.0` to `PI` radians.  
 Special cases:  
 - `acos(x)` is `NaN`, when `abs(x) > 1` or `x` is `NaN`.  
`@SinceKotlin("1.2")` public expect fun `acos(x: Double): Double`.  
 Computes the arc tangent of the value `[x]`; the returned value is an angle in the range from `-PI/2` to `PI/2` radians.  
 Special cases:  
 - `atan(NaN)` is `NaN`.  
`@SinceKotlin("1.2")` public expect fun `atan(x: Double): Double`.  
 Returns the angle `theta` of the polar coordinates `(r, theta)` that correspond to the rectangular coordinates `(x, y)` by computing the arc tangent of the value `[y] / [x]`; the returned value is an angle in the range from `-PI` to `PI` radians.  
 Special cases:  
 - `atan2(0.0, 0.0)` is `0.0`.  
 - `atan2(0.0, x)` is `0.0` for `x > 0` and `PI` for `x < 0`.  
 - `atan2(-0.0, x)` is `-0.0` for `x > 0` and `-PI` for `x < 0`.  
 - `atan2(y, +Inf)` is `0.0` for `0 < y < +Inf` and `-0.0` for `-Inf < y < 0`.  
 - `atan2(y, -Inf)` is `PI` for `0 < y < +Inf` and `-PI` for `-Inf < y < 0`.  
 - `atan2(y, 0.0)` is `PI/2` for `y > 0` and `-PI/2` for `y < 0`.  
 - `atan2(+Inf, x)` is `PI/2` for finite `x`.  
 - `atan2(-Inf, x)` is `-PI/2` for finite `x`.  
 - `atan2(NaN, x)` and `atan2(y, NaN)` is `NaN`.  
`@SinceKotlin("1.2")` public expect fun `atan2(y: Double, x: Double): Double`.  
 Computes the hyperbolic sine of the value `[x]`.  
 Special cases:  
 - `sinh(NaN)` is `NaN`.  
 - `sinh(+Inf)` is `+Inf`.  
 - `sinh(-Inf)` is `-Inf`.  
`@SinceKotlin("1.2")` public expect fun `sinh(x: Double): Double`.  
 Computes the hyperbolic cosine of the value `[x]`.  
 Special cases:  
 - `cosh(NaN)` is `NaN`.  
 - `cosh(+Inf)` is `+Inf`.  
`@SinceKotlin("1.2")` public expect fun `cosh(x: Double): Double`.  
 Computes the hyperbolic tangent of the value `[x]`.  
 Special cases:  
 - `tanh(NaN)` is `NaN`.  
 - `tanh(+Inf)` is `1.0`.  
 - `tanh(-Inf)` is `-1.0`.  
`@SinceKotlin("1.2")` public expect fun `tanh(x: Double): Double`.  
 Computes the inverse hyperbolic sine of the value `[x]`.  
 The returned value is `y` such that `sinh(y) == x`.  
 Special cases:  
 - `asinh(NaN)` is `NaN`.  
 - `asinh(+Inf)` is `+Inf`.  
 - `asinh(-Inf)` is `-Inf`.  
`@SinceKotlin("1.2")` public expect fun `asinh(x: Double): Double`.  
 Computes the inverse hyperbolic cosine of the value `[x]`.  
 The returned value is positive `y` such that `cosh(y) == x`.  
 Special cases:  
 - `acosh(NaN)` is `NaN`.  
 - `acosh(x)` is `NaN` when `x < 1`.  
 - `acosh(+Inf)` is `+Inf`.  
`@SinceKotlin("1.2")` public expect fun `acosh(x: Double): Double`.  
 Computes the inverse hyperbolic tangent of the value `[x]`.  
 The returned value is `y` such that `tanh(y) == x`.  
 Special cases:  
 - `atanh(NaN)` is `NaN`.  
 - `atanh(x)` is `NaN` when `x > 1` or `x < -1`.  
 - `atanh(1.0)` is `+Inf`.  
 - `atanh(-1.0)` is `-Inf`.  
`@SinceKotlin("1.2")` public expect fun `atanh(x: Double): Double`.  
 Computes `sqrt(x^2 + y^2)` without intermediate overflow or underflow.  
 Special cases:  
 - returns `+Inf` if any of arguments is infinite.  
 - returns `NaN` if any of arguments is `NaN` and the other is not infinite.  
`@SinceKotlin("1.2")` public expect fun `hypot(x: Double, y: Double): Double`.  
 Computes the positive square root of the value `[x]`.  
 Special cases:  
 - `sqrt(x)` is `NaN` when `x < 0` or `x` is `NaN`.  
`@SinceKotlin("1.2")` public expect fun `sqrt(x: Double): Double`.  
 Computes Euler's number `e` raised to the power of the value `[x]`.  
 Special cases:  
 - `exp(NaN)` is `NaN`.  
 - `exp(+Inf)` is `+Inf`.  
 - `exp(-Inf)` is `0.0`.  
`@SinceKotlin("1.2")` public expect fun `exp(x: Double): Double`.  
 Computes `exp(x) - 1`.  
 This function can be implemented to produce more precise result for `[x]` near zero.  
 Special cases:  
 - `expm1(NaN)` is `NaN`.  
 - `expm1(+Inf)` is `+Inf`.  
 - `expm1(-Inf)` is `-1.0`.  
 @see `[exp]` function.  
`@SinceKotlin("1.2")` public expect fun `expm1(x: Double): Double`.  
 Computes the logarithm of the value `[x]` to the given `[base]`.  
 Special cases:  
 - `log(x, b)` is `NaN` if either `x` or `b` are `NaN`.  
 - `log(x, b)` is `NaN` when `x < 0` or `b <= 0` or `b == 1.0`.  
 - `log(+Inf, +Inf)` is `NaN`.  
 - `log(+Inf, b)` is `+Inf` for `b > 1` and `-Inf` for `b < 1`.  
 - `log(0.0, b)` is `-Inf` for `b > 1` and `+Inf` for `b < 1`.  
 See also logarithm functions for common fixed bases: `[ln]`, `[log10]` and `[log2]`.  
`@SinceKotlin("1.2")` public expect fun `log(x: Double, base: Double): Double`.  
 Computes the natural logarithm (base `E`) of the value `[x]`.  
 Special cases:  
 - `ln(NaN)` is `NaN`.  
 - `ln(x)` is `NaN` when `x < 0.0`.  
 - `ln(+Inf)` is `+Inf`.  
 - `ln(0.0)` is `-Inf`.  
`@SinceKotlin("1.2")` public expect fun

`ln(x: Double): Double` Computes the common logarithm (base 10) of the value [x].  
 @see [ln] function for special cases.  
`public expect fun log10(x: Double): Double` Computes the binary logarithm (base 2) of the value [x].  
 @see [ln] function for special cases.  
`public expect fun log2(x: Double): Double` Computes  $\ln(x + 1)$ .  
 This function can be implemented to produce more precise result for [x] near zero.  
 Special cases:  
 $\ln(\text{NaN})$  is `NaN`  
 $\ln(x)$  is `NaN` where  $x < -1.0$   
 $\ln(-1.0)$  is `-Inf`  
 $\ln(+Inf)$  is `+Inf`  
 @see [ln] function  
 @see [expm1] function  
`public expect fun ln1p(x: Double): Double` Rounds the given value [x] to an integer towards positive infinity.  
 @return the smallest double value that is greater than or equal to the given value [x] and is a mathematical integer.  
 Special cases:  
 $\text{ceil}(x)$  is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.  
`public expect fun ceil(x: Double): Double` Rounds the given value [x] to an integer towards negative infinity.  
 @return the largest double value that is smaller than or equal to the given value [x] and is a mathematical integer.  
 Special cases:  
 $\text{floor}(x)$  is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.  
`public expect fun floor(x: Double): Double` Rounds the given value [x] to an integer towards zero.  
 @return the value [x] having its fractional part truncated.  
 Special cases:  
 $\text{truncate}(x)$  is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.  
`public expect fun truncate(x: Double): Double` Rounds the given value [x] towards the closest integer with ties rounded towards even integer.  
 Special cases:  
 $\text{round}(x)$  is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.  
`public expect fun round(x: Double): Double` Returns the absolute value of the given value [x].  
 Special cases:  
 $\text{abs}(\text{NaN})$  is `NaN`  
 @see `absoluteValue` extension property for [Double]  
`public expect fun abs(x: Double): Double` Returns the sign of the given value [x]:  
`-1.0` if the value is negative,  
`0.0` if the value is zero,  
`1.0` if the value is positive  
 Special case:  
 $\text{sign}(\text{NaN})$  is `NaN`  
`public expect fun sign(x: Double): Double` Returns the smaller of two values.  
 If either value is `NaN`, then the result is `NaN`.  
`public expect fun min(a: Double, b: Double): Double` Returns the greater of two values.  
 If either value is `NaN`, then the result is `NaN`.  
`public expect fun max(a: Double, b: Double): Double` Raises this value to the power [x].  
 Special cases:  
 $b.\text{pow}(0.0)$  is `1.0`  
 $b.\text{pow}(1.0) == b$   
 $b.\text{pow}(\text{NaN})$  is `NaN`  
 $\text{NaN}.\text{pow}(x)$  is `NaN` for  $x \neq 0.0$   
 $b.\text{pow}(\text{Inf})$  is `NaN` for  $\text{abs}(b) == 1.0$   
 $b.\text{pow}(x)$  is `NaN` for  $b < 0$  and `x` is finite and not an integer  
`public expect fun Double.pow(x: Double): Double` Raises this value to the integer power [n].  
 See the other overload of [pow] for details.  
`public expect fun Double.pow(n: Int): Double` Returns the absolute value of this value.  
 Special cases:  
 $\text{NaN}.\text{absoluteValue}$  is `NaN`  
 @see `abs` function  
`public expect val Double.absoluteValue: Double` Returns the sign of this value:  
`-1.0` if the value is negative,  
`0.0` if the value is zero,  
`1.0` if the value is positive  
 Special case:  
 $\text{NaN}.\text{sign}$  is `NaN`  
`public expect val Double.sign: Double` Returns this value with the sign bit same as of the [sign] value.  
 If [sign] is `NaN` the sign of the result is undefined.  
`public expect fun Double.withSign(sign: Double): Double` Returns this value with the sign bit same as of the [sign] value.  
`public expect fun Double.withSign(sign: Int): Double` Returns the ulp (unit in the last place) of this value.  
 An ulp is a positive distance between this value and the next nearest [Double] value larger in magnitude.  
 Special Cases:  
 $\text{NaN}.\text{ulp}$  is `NaN`  
 $x.\text{ulp}$  is `+Inf` when `x` is `+Inf` or `-Inf`  
 $0.0.\text{ulp}$  is `Double.MIN_VALUE`  
`public expect val Double.ulp: Double` Returns the [Double] value nearest to this value in direction of positive infinity.  
`public expect fun Double.nextUp(): Double` Returns the [Double] value nearest to this value in direction of negative infinity.  
`public expect fun Double.nextDown(): Double` Returns the [Double] value

nearest to this value in direction from this value towards the value [to].  
Special cases:  
`x.nextTowards(y)` is `NaN` if either `x` or `y` are `NaN`  
`x.nextTowards(x) == x`  
@SinceKotlin("1.2")\npublic expect fun Double.nextTowards(to: Double): Double  
Rounds this [Double] value to the nearest integer and converts the result to [Int].  
Ties are rounded towards positive infinity.  
Special cases:  
`x.roundToInt() == Int.MAX_VALUE` when `x > Int.MAX_VALUE`  
`x.roundToInt() == Int.MIN_VALUE` when `x < Int.MIN_VALUE`  
@throws IllegalArgumentException when this value is `NaN`  
@SinceKotlin("1.2")\npublic expect fun Double.roundToInt(): Int  
Rounds this [Double] value to the nearest integer and converts the result to [Long].  
Ties are rounded towards positive infinity.  
Special cases:  
`x.roundToLong() == Long.MAX_VALUE` when `x > Long.MAX_VALUE`  
`x.roundToLong() == Long.MIN_VALUE` when `x < Long.MIN_VALUE`  
@throws IllegalArgumentException when this value is `NaN`  
@SinceKotlin("1.2")\npublic expect fun Double.roundToLong(): Long  
// endregion  
// region ===== Float Math  
===== \n\n\*\* Computes the sine of the angle [x] given in radians.  
Special cases:  
`sin(NaN|+Inf|-Inf)` is `NaN`  
@SinceKotlin("1.2")\npublic expect fun sin(x: Float): Float  
Computes the cosine of the angle [x] given in radians.  
Special cases:  
`cos(NaN|+Inf|-Inf)` is `NaN`  
@SinceKotlin("1.2")\npublic expect fun cos(x: Float): Float  
Computes the tangent of the angle [x] given in radians.  
Special cases:  
`tan(NaN|+Inf|-Inf)` is `NaN`  
@SinceKotlin("1.2")\npublic expect fun tan(x: Float): Float  
Computes the arc sine of the value [x];  
the returned value is an angle in the range from  $-\pi/2$  to  $\pi/2$  radians.  
Special cases:  
`asin(x)` is `NaN`, when `abs(x) > 1` or x is `NaN`  
@SinceKotlin("1.2")\npublic expect fun asin(x: Float): Float  
Computes the arc cosine of the value [x];  
the returned value is an angle in the range from  $0.0$  to  $\pi$  radians.  
Special cases:  
`acos(x)` is `NaN`, when `abs(x) > 1` or x is `NaN`  
@SinceKotlin("1.2")\npublic expect fun acos(x: Float): Float  
Computes the arc tangent of the value [x];  
the returned value is an angle in the range from  $-\pi/2$  to  $\pi/2$  radians.  
Special cases:  
`atan(NaN)` is `NaN`  
@SinceKotlin("1.2")\npublic expect fun atan(x: Float): Float  
Returns the angle  $\theta$  of the polar coordinates  $(r, \theta)$  that correspond  
to the rectangular coordinates  $(x, y)$  by computing the arc tangent of the value  $[y] / [x]$ ;  
the returned value is an angle in the range from  $-\pi$  to  $\pi$  radians.  
Special cases:  
`atan2(0.0, 0.0)` is  $0.0$   
`atan2(0.0, x)` is  $0.0$  for  $x > 0$  and  $\pi$  for  $x < 0$   
`atan2(-0.0, x)` is  $-0.0$  for  $x > 0$  and  $-\pi$  for  $x < 0$   
`atan2(y, +Inf)` is  $0.0$  for  $0 < y < +Inf$  and  $-0.0$  for  $-Inf < y < 0$   
`atan2(y, -Inf)` is  $\pi$  for  $0 < y < +Inf$  and  $-\pi$  for  $-Inf < y < 0$   
`atan2(y, 0.0)` is  $\pi/2$  for  $y > 0$  and  $-\pi/2$  for  $y < 0$   
`atan2(+Inf, x)` is  $\pi/2$  for finite  $x$   
`atan2(-Inf, x)` is  $-\pi/2$  for finite  $x$   
`atan2(NaN, x)` and `atan2(y, NaN)` is `NaN`  
@SinceKotlin("1.2")\npublic expect fun atan2(y: Float, x: Float): Float  
Computes the hyperbolic sine of the value [x].  
Special cases:  
`sinh(NaN)` is `NaN`  
`sinh(+Inf)` is  $+Inf$   
`sinh(-Inf)` is  $-Inf$   
@SinceKotlin("1.2")\npublic expect fun sinh(x: Float): Float  
Computes the hyperbolic cosine of the value [x].  
Special cases:  
`cosh(NaN)` is `NaN`  
`cosh(+Inf|-Inf)` is  $+Inf$   
@SinceKotlin("1.2")\npublic expect fun cosh(x: Float): Float  
Computes the hyperbolic tangent of the value [x].  
Special cases:  
`tanh(NaN)` is `NaN`  
`tanh(+Inf)` is  $1.0$   
`tanh(-Inf)` is  $-1.0$   
@SinceKotlin("1.2")\npublic expect fun tanh(x: Float): Float  
Computes the inverse hyperbolic sine of the value [x].  
The returned value is  $y$  such that  $\sinh(y) == x$ .  
Special cases:  
`asinh(NaN)` is `NaN`  
`asinh(+Inf)` is  $+Inf$   
`asinh(-Inf)` is  $-Inf$   
@SinceKotlin("1.2")\npublic expect fun asinh(x: Float): Float  
Computes the inverse hyperbolic cosine of the value [x].  
The returned value is positive  $y$  such that  $\cosh(y) == x$ .  
Special cases:  
`acosh(NaN)` is `NaN`  
`acosh(x)` is `NaN` when  $x < 1$   
`acosh(+Inf)` is  $+Inf$   
@SinceKotlin("1.2")\npublic expect fun acosh(x: Float): Float  
Computes the inverse hyperbolic tangent of the value [x].  
The returned value is  $y$  such that  $\tanh(y) == x$ .  
Special cases:  
`tanh(NaN)` is `NaN`  
`tanh(x)` is `NaN` when  $x > 1$  or  $x < -1$   
`tanh(1.0)` is  $+Inf$   
`tanh(-1.0)` is  $-Inf$   
@SinceKotlin("1.2")\npublic expect fun atanh(x: Float): Float  
Computes  $\sqrt{x^2 +$

$y^2$ ) without intermediate overflow or underflow.  
`* Special cases:`  
`* - returns +Inf if any of arguments is infinite`  
`* - returns NaN if any of arguments is NaN and the other is not infinite`

`*\n@SinceKotlin("1.2")\npublic expect fun hypot(x: Float, y: Float): Float\n\n/**\n * Computes the positive square root of the value [x].\n * Special cases:\n * - sqrt(x) is NaN when x < 0 or x is NaN\n`

`*\n@SinceKotlin("1.2")\npublic expect fun sqrt(x: Float): Float\n\n/**\n * Computes Euler's number e raised to the power of the value [x].\n * Special cases:\n * - exp(NaN) is NaN\n * - exp(+Inf) is +Inf\n * - exp(-Inf) is 0.0\n`

#### GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.

59 Temple Place - Suite 330, Boston, MA

02111-1307, USA.

Everyone is permitted to copy and distribute verbatim copies  
of this license document, but changing it is not allowed.

#### Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to

your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

## GNU GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law:

that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If

identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the

operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under

any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

#### END OF TERMS AND CONDITIONS

#### Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) 19yy <name of author>
```

```
This program is free software; you can redistribute it and/or modify  
it under the terms of the GNU General Public License as published by  
the Free Software Foundation; either version 2 of the License, or  
(at your option) any later version.
```

```
This program is distributed in the hope that it will be useful,  
but WITHOUT ANY WARRANTY; without even the implied warranty of  
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the  
GNU General Public License for more details.
```

```
You should have received a copy of the GNU General Public License
```

along with this program; if not, write to the Free Software Foundation, Inc., 59 Temple Place - Suite 330, Boston, MA 02111-1307, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands ``show w'` and ``show c'` should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than ``show w'` and ``show c'`; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

The "Artistic License"

Preamble

The intent of this document is to state the conditions under which a Package may be copied, such that the Copyright Holder maintains some semblance of artistic control over the development of the package, while giving the users of the package the right to use and distribute the Package in a more-or-less customary fashion, plus the right to make reasonable modifications.

Definitions:

"Package" refers to the collection of files distributed by the Copyright Holder, and derivatives of that collection of files created through textual modification.

"Standard Version" refers to such a Package if it has not been modified, or has been modified in accordance with the wishes of the Copyright Holder as specified below.

"Copyright Holder" is whoever is named in the copyright or copyrights for the package.

"You" is you, if you're thinking about copying or distributing this Package.

"Reasonable copying fee" is whatever you can justify on the basis of media cost, duplication charges, time of people involved, and so on. (You will not be required to justify it to the Copyright Holder, but only to the computing community at large as a market that must bear the fee.)

"Freely Available" means that no fee is charged for the item itself, though there may be fees involved in handling the item. It also means that recipients of the item may redistribute it under the same conditions they received it.

1. You may make and give away verbatim copies of the source form of the Standard Version of this Package without restriction, provided that you duplicate all of the original copyright notices and associated disclaimers.
2. You may apply bug fixes, portability fixes and other modifications derived from the Public Domain or from the Copyright Holder. A Package modified in such a way shall still be considered the Standard Version.
3. You may otherwise modify your copy of this Package in any way, provided that you insert a prominent notice in each changed file stating how and when you changed that file, and provided that you do at least ONE of the following:
  - a) place your modifications in the Public Domain or otherwise make them Freely Available, such as by posting said modifications to Usenet or an equivalent medium, or placing the modifications on a major archive site such as uunet.uu.net, or by allowing the Copyright Holder to include your modifications in the Standard Version of the Package.
  - b) use the modified Package only within your corporation or organization.

c) rename any non-standard executables so the names do not conflict with standard executables, which must also be provided, and provide a separate manual page for each non-standard executable that clearly documents how it differs from the Standard Version.

d) make other distribution arrangements with the Copyright Holder.

4. You may distribute the programs of this Package in object code or executable form, provided that you do at least ONE of the following:

a) distribute a Standard Version of the executables and library files, together with instructions (in the manual page or equivalent) on where to get the Standard Version.

b) accompany the distribution with the machine-readable source of the Package with your modifications.

c) give non-standard executables non-standard names, and clearly document the differences in manual pages (or equivalent), together with instructions on where to get the Standard Version.

d) make other distribution arrangements with the Copyright Holder.

5. You may charge a reasonable copying fee for any distribution of this Package. You may charge any fee you choose for support of this Package. You may not charge a fee for this Package itself. However, you may distribute this Package in aggregate with other (possibly commercial) programs as part of a larger (possibly commercial) software distribution provided that you do not advertise this Package as a product of your own. You may embed this Package's interpreter within an executable of yours (by linking); this shall be construed as a mere form of aggregation, provided that the complete Standard Version of the interpreter is so embedded.

6. The scripts and library files supplied as input to or produced as output from the programs of this Package do not automatically fall under the copyright of this Package, but belong to whoever generated them, and may be sold commercially, and may be aggregated with this Package. If such scripts or library files are aggregated with this Package via the so-called "undump" or "unexec" methods of producing a binary executable image, then distribution of such an image shall neither be construed as a distribution of this Package nor shall it fall under the restrictions of Paragraphs 3 and 4, provided that you do not represent such an executable image as a Standard Version of this Package.

7. C subroutines (or comparably compiled subroutines in other languages) supplied by you and linked into this Package in order to

emulate subroutines and variables of the language defined by this Package shall not be considered part of this Package, but are the equivalent of input as in Paragraph 6, provided these subroutines do not change the language in any way that would cause it to fail the regression tests for the language.

8. Aggregation of this Package with a commercial distribution is always permitted provided that the use of this Package is embedded; that is, when no overt attempt is made to make this Package's interfaces visible to the end user of the commercial distribution. Such use shall not be construed as a distribution of this Package.

9. The name of the Copyright Holder may not be used to endorse or promote products derived from this software without specific prior written permission.

10. THIS PACKAGE IS PROVIDED "AS IS" AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

The End

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,  
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies  
of this license document, but changing it is not allowed.

#### Preamble

The licenses for most software are designed to take away your  
freedom to share and change it. By contrast, the GNU General Public  
License is intended to guarantee your freedom to share and change free  
software--to make sure the software is free for all its users. This  
General Public License applies to most of the Free Software  
Foundation's software and to any other program whose authors commit to  
using it. (Some other Free Software Foundation software is covered by  
the GNU Lesser General Public License instead.) You can apply it to  
your programs, too.

When we speak of free software, we are referring to freedom, not  
price. Our General Public Licenses are designed to make sure that you  
have the freedom to distribute copies of free software (and charge for  
this service if you wish), that you receive source code or can get it  
if you want it, that you can change the software or use pieces of it  
in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid  
anyone to deny you these rights or to ask you to surrender the rights.

These restrictions translate to certain responsibilities for you if you

distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

## GNU GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or

collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is

void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing

to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

#### NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING

WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

## END OF TERMS AND CONDITIONS

### How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) <year> <name of author>
```

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) year name of author  
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.  
This is free software, and you are welcome to redistribute it  
under certain conditions; type `show c' for details.
```

The hypothetical commands `show w` and `show c` should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w` and `show c`; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program  
`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989  
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, and the entire permission notice in its entirety, including the disclaimer of warranties.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
3. The name of the author may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED ``AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ALL OF WHICH ARE HEREBY DISCLAIMED. IN NO EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF NOT ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

## 1.34 json-cpp 0.7.0

### 1.34.1 Available under license :

The JsonCpp library's source code, including accompanying documentation, tests and demonstration applications, are licensed under the following conditions...

The author (Baptiste Lepilleur) explicitly disclaims copyright in all jurisdictions which recognize such a disclaimer. In such jurisdictions, this software is released into the Public Domain.

In jurisdictions which do not recognize Public Domain property (e.g. Germany as of 2010), this software is Copyright (c) 2007-2010 by Baptiste Lepilleur, and is released under the terms of the MIT License (see below).

In jurisdictions which recognize Public Domain property, the user of this software may choose to accept it either as 1) Public Domain, 2) under the conditions of the MIT License (see below), or 3) under the terms of dual Public Domain/MIT License conditions described here, as they choose.

The MIT License is about as close to Public Domain as a license can get, and is described in clear, concise terms at:

[http://en.wikipedia.org/wiki/MIT\\_License](http://en.wikipedia.org/wiki/MIT_License)

The full text of the MIT License follows:

=====  
Copyright (c) 2007-2010 Baptiste Lepilleur

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

=====  
(END LICENSE TEXT)

The MIT license is compatible with both the GPL and commercial software, affording one all of the rights of Public Domain with the minor nuisance of being required to keep the above copyright notice and license text in the source code. Note also that by accepting the Public Domain "license" you can re-license your copy using whatever license you like.

# Contributor documentation

This site is a collection of docs and best practices for contributors to Firebase Android SDKs.

It describes how Firebase works on Android and provides guidance on how to build/maintain a Firebase SDK.

## ## New to Firebase?

- [Development Environment Setup]({{ site.baseurl }}{% link onboarding/env\_setup.md %})
- [Creating a new SDK]({{ site.baseurl }}{% link onboarding/new\_sdk.md %})
- [How Firebase works]({{ site.baseurl }}{% link how\_firebase\_works.md %})

---

parent: Best Practices

---

## # Dependency Injection

While [Firebase Components]({{ site.baseurl }}{% link components/components.md %}) provides basic Dependency Injection capabilities for interop between Firebase SDKs, it's not ideal as a general purpose DI framework for a few reasons, to name some:

- \* It's verbose, i.e. requires manually specifying dependencies and constructing instances of components in Component definitions.
- \* It has a runtime cost, i.e. initialization time is linear in the number of Components present in the graph

As a result using [Firebase Components]({{ site.baseurl }}{% link components/components.md %}) is appropriate only for inter-SDK injection and scoping instances per `FirebaseApp`.

On the other hand, manually instantiating SDKs is often tedious, errorprone, and leads to code smells that make code less testable and couples it to the implementation rather than the interface. For more context see [Dependency Injection](https://en.wikipedia.org/wiki/Dependency\_injection) and [Motivation](https://github.com/google/guice/wiki/Motivation).

{: .important }

It's recommended to use [Dagger](https://dagger.dev) for internal dependency injection within the SDKs and [Components]({{ site.baseurl }}{% link components/components.md %}) to inject inter-sdk dependencies that are available only at runtime into the [Dagger Graph](https://dagger.dev/dev-guide/#building-the-graph) via [builder setters](https://dagger.dev/dev-guide/#binding-instances) or [factory arguments](https://dagger.dev/api/latest/dagger/Component.Factory.html).

See: [Dagger docs](https://dagger.dev)

See: [Dagger tutorial](https://dagger.dev/tutorial/)

{: .highlight }

While Hilt is the recommended way to use dagger in Android applications, it's not suitable for SDK/library development.

## ## How to get started

Since [Dagger](https://dagger.dev) does not strictly follow semver and requires the dagger-compiler version to match the dagger library version,

it's not safe to depend on it via a pom level dependency, see [This comment](https://github.com/firebase/firebase-android-sdk/issues/1677#issuecomment-645669608) for context. For this reason in Firebase SDKs we "vendor/repackage" Dagger into the SDK itself under `com.google.firebase.{sdkname}.dagger`. While it incurs in a size increase, it's usually on the order of a couple of KB and is considered negligible.

To use Dagger in your SDK use the following in your Gradle build file:

```
```groovy
plugins {
    id("firebase-vendor")
}

dependencies {
    implementation(libs.javax.inject)
    vendor(libs.dagger.dagger) {
        exclude group: "javax.inject", module: "javax.inject"
    }
    annotationProcessor(libs.dagger.compiler)
}
```
```

## General Dagger setup

As mentioned in [Firebase Components]({{ site.baseurl }}{% link components/components.md %}), all components are scoped per `FirebaseApp` meaning there is a single instance of the component within a given `FirebaseApp`.

This makes it a natural fit to get all inter-sdk dependencies and instantiate the Dagger component inside the `ComponentRegistrar`.

```
```kotlin
class MyRegistrar : ComponentRegistrar {
    override fun getComponents() = listOf(
        Component.builder(MySdk::class.java)
            .add(Dependency.required(FirebaseOptions::class.java))
            .add(Dependency.optionalProvider(SomeInteropDep::class.java))
            .factory(c -> DaggerMySdkComponent.builder()
                .setFirebaseApp(c.get(FirebaseApp::class.java))
                .setSomeInterop(c.getProvider(SomeInteropDep::class.java))
                .build()
            ).getMySdk()
        ).build()
}
```
```

Here's a simple way to define the dagger component:

```

```kotlin
@Component(modules = MySdkComponent.MainModule::class)
@Singleton
interface MySdkComponent {
    // Informs dagger that this is one of the types we want to be able to create
    // In this example we only care about MySdk
    fun getMySdk() : MySdk

    // Tells Dagger that some types are not available statically and in order to create the component
    // it needs FirebaseApp and Provider<SomeInteropDep>
    @Component.Builder
    interface Builder {
        @BindsInstance fun setFirebaseApp(app: FirebaseApp)
        @BindsInstance fun setSomeInterop(interop: com.google.firebase.inject.Provider<SomeInteropDep>)
        fun build() : MySdkComponent
    }

    @Module
    interface MainModule {
        // define module @Provides and @Binds here
    }
}
```

```

The only thing left to do is to properly annotate `MySdk`:

```

```kotlin
@Singleton
class MySdk @Inject constructor(app: FirebaseApp, interopAdapter: MySdkAdapter) {
    fun someMethod() {
        interopAdapter.doInterop()
    }
}

@Singleton
class MySdkInteropAdapter @Inject constructor(private val interop:
com.google.firebase.inject.Provider<SomeInteropDep>) {
    fun doInterop() {
        interop.get().doStuff()
    }
}
```

## Scope

```

Unlike Component, Dagger does not use singleton scope by default and instead injects a new instance of a type at each injection point,

in the example above we want `MySdk` and `MySdkInteropAdapter` to be singletons so they are annotated with `@Singleton`.

See [Scoped bindings](https://dagger.dev/dev-guide/#singletons-and-scoped-bindings) for more details.

### Support multiple instances of the SDK per `FirebaseApp` (multi-resource)

As mentioned in [Firebase Components]({{ site.baseurl }}{% link components/components.md %}), some SDKs support multi-resource mode,

which effectively means that there are 2 scopes at play:

1. `@Singleton` scope that the main `MultiResourceComponent` has.
2. Each instance of the sdk will have its own scope.

```
```mermaid

```
end
```

```

classDef green fill:#4db6ac
classDef blue fill:#1a73e8
class GlobalComponents green
class DatabaseComponent green
class Default blue
class MyDbName blue
```

```

As you can see above, `DatabaseMultiDb` and `SomeImpl` are singletons, while `FirebaseDatabase` and `SomeOtherImpl` are scoped per `database name`.

It can be easily achieved with the help of [Dagger's subcomponents](https://dagger.dev/dev-guide/subcomponents).

For example:

```

```kotlin
@Scope
annotation class DbScope

@Component(modules = DatabaseComponent.MainModule::class)
interface DatabaseComponent {
    fun getMultiDb() : DatabaseMultiDb

    @Component.Builder
    interface Builder {
        // usual setters for Firebase component dependencies
        // ...
        fun build() : DatabaseComponent
    }

    @Module(subcomponents = DbInstanceComponent::class)
    interface MainModule { }

    @Subcomponent(modules = DbInstanceComponent.InstanceModule::class)
    @DbScope
    interface DbInstanceComponent {
        fun factory() : Factory

        @Subcomponent.Factory
        interface Factory {
            fun create(@BindsInstance @Named("dbName") dbName: String)
        }
    }

    @Module
    interface InstanceModule {
        // ...
    }
}
```

```

```
}  
}  
...
```

Annotating `FirebaseDatabase`:

```
```kotlin  
@DbScope  
class FirebaseDatabase @Inject constructor(options: FirebaseOptions, @Named dbName: String) {  
    // ...  
}  
...
```

Implementing `DatabaseMultiDb`:

```
```kotlin  
@Singleton  
class DatabaseMultiDb @Inject constructor(private val factory: DbInstanceComponent.Factory) {  
    private val instances = mutableMapOf<String, FirebaseDatabase>()
```

```
    @Synchronized  
    fun get(dbName: String) : FirebaseDatabase {  
        if (!instances.containsKey(dbName)) {  
            mInstances.put(dbName, factory.create(dbName))  
        }  
        return mInstances.get(dbName);  
    }  
}  
...
```

```

```
# Creating a new Firebase SDK  
{: .no_toc}
```

```
1. TOC  
{:toc}
```

Want to create a new SDK in  
[firebase/firebase-android-sdk](https://github.com/firebase/firebase-android-sdk)?  
Read on.

```
{:toc}
```

```
## Repository layout and Gradle
```

```
[firebase/firebase-android-sdk](https://github.com/firebase/firebase-android-sdk)
```

uses a multi-project Gradle build to organize the different libraries it hosts. As a consequence, each project/product within this repo is hosted under its own subdirectory with its respective build file(s).

```
```bash
firebase-android-sdk
buildSrc
appcheck
  firebase-appcheck
  firebase-appcheck-playintegrity
firebase-annotations
firebase-common
  firebase-common.gradle # note the name of the build file
ktx
  ktx.gradle.kts # it can also be kts
build.gradle # root project build file.
```
```

Most commonly, SDKs are located as immediate child directories of the root directory, with the directory name being the exact name of the Maven artifact ID the library will have once released. e.g. `firebase-common` directory hosts code for the `com.google.firebase:firebase-common` SDK.

```
{: .warning }
```

Note that the build file name for any given SDK is not `build.gradle` or `build.gradle.kts` but rather mirrors the name of the sdk, e.g.

```
`firebase-common/firebase-common.gradle` or `firebase-common/firebase-common.gradle.kts`.
```

All of the core Gradle build logic lives in `buildSrc` and is used by all SDKs.

SDKs can be grouped together for convenience by placing them in a directory of choice.

### ## Creating an SDK

Let's say you want to create an SDK named `firebase-foo`

1. Create a directory called `firebase-foo`.
1. Create a file `firebase-foo/firebase-foo.gradle.kts`.
1. Add `firebase-foo` line to `subprojects.cfg` at the root of the tree.

### Update `firebase-foo.gradle.kts` with the following content

```
<details open markdown="block">
```

```
<summary>
```

```
  firebase-foo.gradle.kts
```

```
</summary>
```

```

```kotlin
plugins {
    id("firebase-library")
    // Uncomment for Kotlin
    // id("kotlin-android")
}

firebaseLibrary {
    // enable this only if you have tests in `androidTest`.
    testLab.enabled = true
    publishSources = true
    publishJavadoc = true
}

android {
    val targetSdkVersion : Int by rootProject
    val minSdkVersion : Int by rootProject

    compileSdk = targetSdkVersion
    defaultConfig {
        namespace = "com.google.firebase.foo"
        // change this if you have custom needs.
        minSdk = minSdkVersion
        targetSdk = targetSdkVersion
        testInstrumentationRunner = "androidx.test.runner.AndroidJUnitRunner"
    }

    testOptions.unitTests.isIncludeAndroidResources = true
}

dependencies {
    implementation(project(":firebase-common"))
    implementation(project(":firebase-components"))
}
```

```

...

</details>

### Create `src/main/AndroidManifest.xml` with the following content:

```

<details open markdown="block">
<summary>
    src/main/AndroidManifest.xml
</summary>
```xml
<?xml version="1.0" encoding="utf-8"?>
<!-- Copyright {{ 'now' | date: "%Y" }} Google LLC -->
<!-- -->

```

```

<!-- Licensed under the Apache License, Version 2.0 (the "License"); -->
<!-- you may not use this file except in compliance with the License. -->
<!-- You may obtain a copy of the License at -->
<!-- -->
<!-- http://www.apache.org/licenses/LICENSE-2.0 -->
<!-- -->
<!-- Unless required by applicable law or agreed to in writing, software -->
<!-- distributed under the License is distributed on an "AS IS" BASIS, -->
<!-- WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. -->
<!-- See the License for the specific language governing permissions and -->
<!-- limitations under the License. -->

<manifest xmlns:android="http://schemas.android.com/apk/res/android">
  <application>
    <service android:name="com.google.firebase.components.ComponentDiscoveryService"
      android:exported="false">
      <meta-data
        android:name="com.google.firebase.components:com.google.firebase.foo.FirebaseFooRegistrar"
        android:value="com.google.firebase.components.ComponentRegistrar" />
    </service>
  </application>
</manifest>

```

```

</details>

```

```

### Create `com.google.firebase.foo.FirebaseFoo`

```

```

For Kotlin

```

```

<details open markdown="block">
  <summary>
    src/main/kotlin/com/google/firebase/foo/FirebaseFoo.kt
  </summary>

```

```

```kotlin
class FirebaseFoo {
  companion object {
    @JvmStatic
    val instance: FirebaseFoo
    get() = getInstance(Firebase.app)

    @JvmStatic fun getInstance(app: FirebaseApp): FirebaseFoo = app.get(FirebaseFoo::class.java)
  }
}
```

```

```

</details>

```

For Java

<details markdown="block">

<summary>

src/main/java/com/google/firebase/foo/FirebaseFoo.java

</summary>

```
```java
public class FirebaseFoo {
    public static FirebaseFoo getInstance() {
        return getInstance(FirebaseApp.getInstance());
    }
    public static FirebaseFoo getInstance(FirebaseApp app) {
        return app.get(FirebaseFoo.class);
    }
}
```
```

</details>

### Create `com.google.firebase.foo.FirebaseFooRegistrar`

For Kotlin

<details open markdown="block">

<summary>

src/main/kotlin/com/google/firebase/foo/FirebaseFooRegistrar.kt

</summary>

{: .warning }

You should strongly consider using [Dependency Injection]({{ site.baseurl }}{% link best\_practices/dependency\_injection.md %})

to instantiate your sdk instead of manually constructing its instance in the `factory()` below.

```
```kotlin
class FirebaseFooRegistrar : ComponentRegistrar {
    override fun getComponents() =
        listOf(
            Component.builder(FirebaseFoo::class.java).factory { container -> FirebaseFoo() }.build(),
            LibraryVersionComponent.create("fire-foo", BuildConfig.VERSION_NAME)
        )
}
```
```

</details>

For Java

<details markdown="block">

<summary>

src/main/java/com/google/firebase/foo/FirebaseFooRegistrar.java

</summary>

```
```java
public class FirebaseFooRegistrar implements ComponentRegistrar {
    @Override
    public List<Component<?>> getComponents() {
        return Arrays.asList(
            Component.builder(FirebaseFoo.class).factory(c -> new FirebaseFoo()).build(),
            LibraryVersionComponent.create("fire-foo", BuildConfig.VERSION_NAME));
    }
}
```
```

</details>

# How Firebase Works

## Background

### Eager Initialization

One of the biggest strengths for Firebase clients is the ease of integration. In a common case, a developer has very few things to do to integrate with Firebase. There is no need to initialize/configure Firebase at runtime. Firebase automatically initializes at application start and begins providing value to developers. A few notable examples:

- \* `Analytics` automatically tracks app events
- \* `Firebase Performance` automatically tracks app startup time, all network requests and screen performance
- \* `Crashlytics` automatically captures all application crashes, ANRs and non-fatals

This feature makes onboarding and adoption very simple. However, comes with the great responsibility of keeping the application snappy. We shouldn't slow down application startup for 3p developers as it can stand in the way of user adoption of their application.

### Automatic Inter-Product Discovery

When present together in an application, Firebase products can detect each other and automatically provide additional functionality to the developer, e.g.:

- \* `Firestore` automatically detects `Auth` and `AppCheck` to protect read/write access to the database
- \* `Crashlytics` integrates with `Analytics`, when available, to provide additional insights into the application behavior and enables safe app rollouts

## FirebaseApp at the Core of Firebase

Regardless of what Firebase SDKs are present in the app, the main initialization point of Firebase is `FirebaseApp`. It acts as a container for all SDKs, manages their configuration, initialization and lifecycle.

### Initialization

`FirebaseApp` gets initialized with the help of `FirebaseApp#initializeApp()`. This happens [automatically at app startup](<https://firebase.blog/posts/2016/12/how-does-firebase-initialize-on-android>) or manually by the developer.

During initialization, `FirebaseApp` discovers all Firebase SDKs present in the app, determines the dependency graph between products(for inter-product functionality) and initializes `eager` products that need to start immediately, e.g. `Crashlytics` and `FirebasePerformance`.

### Firebase Configuration

`FirebaseApp` contains Firebase configuration for all products to use, namely `FirebaseOptions`, which tells Firebase which `Firebase` project to talk to, which real-time database to use, etc.

### ### Additional Services/Components

In addition to `FirebaseOptions`, `FirebaseApp` registers additional components that product SDKs can request via dependency injection. To name a few:

- \* `android.content.Context` (Application context)
- \* [Common Executors]({{ site.baseurl }}{% link components/executors.md %})
- \* `FirebaseOptions`
- \* Various internal components

### ## Discovery and Dependency Injection

There are multiple considerations that lead to the current design of how Firebase SDKs initialize.

1. Certain SDKs need to initialize at app startup.
2. SDKs have optional dependencies on other products that get enabled when the developer adds the dependency to their app.

To enable this functionality, Firebase uses a runtime discovery and dependency injection framework [firebase-components](https://github.com/firebase/firebase-android-sdk/tree/master/firebase-components).

To integrate with this framework SDKs register the components they provide via a `ComponentRegistrar` and declare any dependencies they need to initialize, e.g.

```
```java
public class MyRegistrar implements ComponentRegistrar {
    @Override
    public List<Component<?>> getComponents() {
        return Arrays.asList(
            // declare the component
            Component.builder(MyComponent.class)
                // declare dependencies
                .add(Dependency.required(Context.class))
                .add(Dependency.required(FirebaseOptions.class))
                .add(Dependency.optionalProvider(InternalAuthProvider.class))
                // let the runtime know how to create your component.
                .factory(
                    diContainer ->
                    new MyComponent(
                        diContainer.get(Context.class),
                        diContainer.get(FirebaseOptions.class),
                        diContainer.get(InternalAuthProvider.class)))
                .build());
        }
    }
}
```

...

This registrar is then registered in `AndroidManifest.xml` of the SDK and is used by `FirebaseApp` to discover all components and construct the dependency graph.

More details in [Firebase Components]({{ site.baseurl }}{% link components/components.md %}).

## # Development Environment Setup

This page describes software and configuration required to work on code in the [Firebase/firebase-android-sdk](https://github.com/firebase/firebase-android-sdk) repository.

{:toc}

## ## JDK

The currently required version of the JDK is `11`. Any other versions are unsupported and using them could result in build failures.

## ## Android Studio

In general, the most recent version of Android Studio should work. The version that is tested at the time of this writing is `Dolphin | 2021.3.1`.

Download it here:

[Download Android Studio](https://developer.android.com/studio)

## ## Emulators

If you plan to run tests on emulators (you should), you should be able to install them directly from Android Studio's AVD manager.

## ## Github (Googlers Only)

To onboard and get write access to the github repository you need to have a github account fully linked with [go/github](http://go/github).

File a bug using this

[bug template](http://b/issues/new?component=312729&template=1016566) and wait for access to be granted.

After that configure github keys as usual using this

[Github documentation page](https://docs.github.com/en/github/authenticating-to-github/connecting-to-github-with-ssh).

## ## Importing the repository

1. Clone the repository with `git clone --recurse-submodules git@github.com:firebase/firebase-android-sdk.git`.`
1. Open Android Studio and click "Open an existing project".  
![Open an existing project](as\_open\_project.png)
1. Find the `firebase-android-sdk`` directory and open.
1. To run integration/device tests you will need a `google-services.json`` file.

## # Firebase Components

```
{: .no_toc}
```

### 1. TOC

```
{:toc}
```

Firebase is known for being easy to use and requiring no/minimal configuration at runtime. Just adding SDKs to the app makes them discover each other to provide additional functionality, e.g. `Firestore`` automatically integrates with `Auth`` if present in the app.

- \* Firebase SDKs have required and optional dependencies on other Firebase SDKs
- \* SDKs have different initialization requirements, e.g. `Analytics`` and `Crashlytics`` must be initialized upon application startup, while some are initialized on demand only.

To accommodate these requirements Firebase uses a component model that discovers SDKs present in the app, determines their dependencies and provides them to dependent SDKs via a `Dependency Injection`` mechanism.

This page describes the aforementioned Component Model, how it works and why it's needed.

## ## Design Considerations

### ### Transparent/invisible to 3p Developers

To provide good developer experience, we don't want developers to think about how SDKs work and interoperate internally.

Instead we want our SDKs to have a simple API surface that hides all of the internal details.

Most products have an API surface that allows developers to get an instance of a given SDK via `FirestoreFoo.getInstance()`` and start using it right away.

### ### Simple to use and integrate with for component developers

- \* The component model is lightweight in terms of integration effort. It is not opinionated on how components are

structured.

- \* The component model should require as little cooperation from components runtime as possible.
- \* It provides component developers with an API that is easy to use correctly, and hard to use incorrectly.
- \* Does not sacrifice testability of individual components in isolation

### Performant at startup and initialization

The runtime does as little work as possible during initialization.

## What is a Component?

A Firebase Component is an entity that:

- \* Implements one or more interfaces
- \* Has a list of dependencies(required or optional). See [Dependencies]({{ site.baseurl }}{% link components/dependencies.md %})
- \* Has initialization requirements(e.g. eager in default app)
- \* Defines a factory creates an instance of the components interface given it's dependencies.  
(In other words describes how to create the given component.)

Example:

```
```java
// Defines a component that is registered as both `FirebaseAuth` and `InternalAuthProvider`.
Component<FirebaseAuth> auth = Component.builder(FirebaseAuth.class, InternalAuthProvider.class)
    // Declares dependencies
    .add(Dependency.required(FirebaseOptions.class))
    // Defines a factory
    .factory(container -> new FirebaseAuth(container.get(FirebaseOptions.class)))
    .eagerInDefaultApp() // alwaysEager() or lazy(), lazy is the default.
    .build()
```
```

All components are singletons within a Component Container(e.g. one instance per FirebaseAuth). There are however SDKs that need the ability to expose multiple objects per FirebaseAuth, for example RTBD(as well as Storage and Firestore) has multidb support which allows developers to access one or more databases within one FirebaseAuth. To address this requirement, SDKs have to register their components in the following form(or similar):

```
```java
// This is the singleton holder of different instances of FirebaseDatabase.
interface RtdbComponent {
    FirebaseDatabase getDefault();
    FirebaseDatabase get(String databaseName);
}
```
```

As you can see in the previous section, components are just values and don't have any behavior per se,

essentially they are just blueprints of how to create them and what dependencies they need.

So there needs to be some `ComponentRuntime` that can discover and wire them together into a dependency graph, in order to do that, there needs to be an agreed upon location where SDKs can register the components they provide.

The next 2 sections describe how it's done.

## ## Component Registration

In order to define the `Components` an SDK provides, it needs to define a class that implements `ComponentRegistrar`, this class contains all component definitions the SDK wants to register with the runtime:

```
```java
public class MyRegistrar implements ComponentRegistrar {
    /// Returns a one or more Components that will be registered in
    /// FirebaseAuth and participate in dependency resolution and injection.
    @Override
    public Collection<FirebaseComponent<?>> getComponents() {
        Arrays.asList(Component.builder(MyType.class)
            /* ... */
            .build());
    }
}
```
```

## ## Component Discovery

In addition to creating the `ComponentRegistrar` class, SDKs also need to add them to their `AndroidManifest.xml` under `ComponentDiscoveryService`:

```
```xml
<manifest xmlns:android="http://schemas.android.com/apk/res/android">
  <application>
    <service android:name="com.google.firebase.components.ComponentDiscoveryService"
      android:exported="false">
      <meta-data
        android:name="com.google.firebase.components:com.google.firebase.foo.FirebaseFooRegistrar"
        android:value="com.google.firebase.components.ComponentRegistrar" />
    </service>
  </application>
</manifest>
```
```

When the final app is built, manifest registrar entries will all end up inside the above `service` as metadata key-value pairs.

At this point `FirebaseApp` will instantiate them and use the `ComponentRuntime` to construct the component graph.

## ## Dependency resolution and initialization

### ### Definitions and constraints

\* \*\*Component A depends on Component B\*\* if `B` depends on an `interface` that `A` implements.

\* \*\*For any Interface I, only one component is allowed to implement I\*\* (with the exception of [Set Dependencies]({{ site.baseurl }}{% link components/dependencies.md % }#set-dependencies)). If this invariant is violated, the container will fail to start at runtime.

\* \*\*There must not be any dependency cycles\*\* among components. See Dependency Cycle Resolution on how this limitation can be mitigated

\* \*\*Components are initialized lazily by default\*\* (unless a component is declared eager) and are initialized when requested by an application either directly or transitively.

The initialization phase of the `FirebaseApp` will consist of the following steps:

1. Get a list of available `FirebaseComponents` that were discovered by the Discovery mechanism
2. Topologically sort components based on their declared dependencies - failing if a dependency cycle is detected or multiple implementations are registered for any interface.
3. Store a map of {iface -> `ComponentFactory`} so that components can be instantiated on demand (Note that component instantiation does not yet happen)
4. Initialize EAGER components or schedule them to initialize on device unlock, if in direct boot mode.

### ### Initialization example

Below is an example illustration of the state of the component graph after initialization:

```
```mermaid
flowchart TD
  Analytics --> Installations
  Auth --> Context
  Auth --> FirebaseOptions
  Context[android.os.Context]
  Crashlytics --> Installations
  Crashlytics --> FirebaseApp
  Crashlytics --> FirebaseOptions
  Crashlytics -. -> Analytics
  Crashlytics --> Context
  Database -. -> Auth
  Database --> Context
  Database --> FirebaseApp
  Database --> FirebaseOptions
  Firestore -. -> Auth
  Messaging --> Installations
  Messaging --> FirebaseOptions
```
```

```
Messaging --> Context
RemoteConfig --> FirebaseApp
RemoteConfig --> Context
RemoteConfig --> Installations
```

```
classDef eager fill:#4db66e,stroke:#4db6ac,color:#000;
classDef transitive fill:#4db6ac,stroke:#4db6ac,color:#000;
classDef always fill:#1a73e8,stroke:#7baaf7,color:#fff;
```

```
class Analytics eager
class Crashlytics eager
class Context always
class FirebaseOptions always
class FirebaseApp always
class Installations transitive
...

```

There are **2** explicitly eager components in this example: ``Crashlytics`` and ``Analytics``.

These components are initialized when ``FirebaseApp`` is initialized. ``Installations`` is initialized eagerly because eager components depends on it(see Prefer Lazy dependencies to avoid this as much as possible).

``FirebaseApp``, ``FirebaseOptions`` and ``Android Context`` are always present in the Component Container and are considered initialized as well.

\*The rest of the components are left uninitialized and will remain so until the client application requests them or an eager

component initializes them by using a Lazy dependency.\*

For example, if the application calls ``FirebaseDatabase.getInstance()``, the container will initialize ``Auth`` and ``Database``

and will return ``Database`` to the user.

```
### Support multiple instances of the SDK per `FirebaseApp` (multi-resource)
```

Some SDKs support multi-resource mode of operation, where it's possible to create more than one instance per ``FirebaseApp``.

Examples:

\* RTDB allows more than one database in a single Firebase project, so it's possible to instantiate one instance of the sdk per database

```
```kotlin
val rtdbOne = Firebase.database(app) // uses default database
val rtdbTwo = Firebase.database(app, "dbName")
```
```

\* Firestore, functions, and others support the same usage pattern

To allow for that, such SDKs register a singleton "MultiResource" [Firebase component]({{ site.baseurl }}{% link components/components.md %}), which creates instances per resource(e.g. db name).

Example

```
```kotlin
class DatabaseComponent(private val app: FirebaseApp, private val tokenProvider: InternalTokenProvider) {
    private val instances: MutableMap<String, FirebaseDatabase> = new HashMap<>();

    @Synchronized
    fun get(dbName: String) : FirebaseDatabase {
        if (!instances.containsKey(dbName)) {
            instances.put(dbName, FirebaseDatabase(app, tokenProvider, dbName))
        }
        return instances.get(dbName);
    }
}

class FirebaseDatabase(
    app: FirebaseApp,
    tokenProvider: InternalTokenProvider,
    private val String dbName)

    companion object {
        fun getInstance(app : FirebaseApp) = getInstance("default")
        fun getInstance(app : FirebaseApp, dbName: String) =
            app.get(DatabaseComponent::class.java).get("default")
    }
}
```

# Executors
{: .no_toc}

1. TOC
{:toc}
```

## ## Intro

OS threads are a limited resource that needs to be used with care. In order to minimize the number of threads used by Firebase as a whole and to increase resource sharing Firebase Common provides a set of standard [executors](https://developer.android.com/reference/java/util/concurrent/Executor) and [coroutine dispatchers](https://kotlinlang.org/api/kotlinx.coroutines/kotlinx-coroutines-core/kotlinx.coroutines/-coroutine-dispatcher/) for use by all Firebase SDKs.

These executors are available as components and can be requested by product SDKs as component dependencies.

Example:

```
```java
public class MyRegistrar implements ComponentRegistrar {
    public List<Component<?>> getComponents() {
        Qualified<Executor> backgroundExecutor = Qualified.qualified(Background.class, Executor.class);
        Qualified<ExecutorService> liteExecutorService = Qualified.qualified(Lightweight.class, ExecutorService.class);

        return Collections.singletonList(
            Component.builder(MyComponent.class)
                .add(Dependency.required(backgroundExecutor))
                .add(Dependency.required(liteExecutorService))
                .factory(c -> new MyComponent(c.get(backgroundExecutor), c.get(liteExecutorService)))
                .build());
    }
}
```
```

All executors (with the exception of `@UiThread`) are available as the following interfaces:

- \* `Executor`
- \* `ExecutorService`
- \* `ScheduledExecutorService`
- \* `CoroutineDispatcher`

`@UiThread` is provided only as a plain `Executor`.

## ### Validation

All SDKs have a custom linter check that detects creation of thread pools and threads, this is to ensure SDKs use the above executors instead of creating their own.

## ## Choose the right executor

Use the following diagram to pick the right executor for the task you have at hand.

```

```mermaid
flowchart TD
  Start[Start] --> DoesBlock{Does it block?}
  DoesBlock -->|No| NeedUi{Does it need to run\n on UI thread?}
  NeedUi -->|Yes| UiExecutor[[UiThread Executor]]
  NeedUi -->|No| TakesLong{Does it take more than\n 10ms to execute?}
  TakesLong -->|No| LiteExecutor[[Lightweight Executor]]
  TakesLong -->|Yes| BgExecutor[[Background Executor]]
  DoesBlock -->|Yes| DiskIO{Does it block only\n on disk IO?}
  DiskIO -->|Yes| BgExecutor
  DiskIO -->|No| BlockExecutor[[Blocking Executor]]

```

```

classDef start fill:#4db6ac,stroke:#4db6ac,color:#000;
class Start start

```

```

classDef condition fill:#f8f9fa,stroke:#bdc1c6,color:#000;
class DoesBlock condition;
class NeedUi condition;
class TakesLong condition;
class DiskIO condition;

```

```

classDef executor fill:#1a73e8,stroke:#7baaf7,color:#fff;
class UiExecutor executor;
class LiteExecutor executor;
class BgExecutor executor;
class BlockExecutor executor;

```

```

```

```

### ### UiThread

Used to schedule tasks on application's UI thread, internally it uses a Handler to post runnables onto the main looper.

Example:

```

```java
// Java
Qualified<Executor> uiExecutor = qualifiedUiThread.class, Executor.class);
```

```

```

```kotlin
// Kotlin
Qualified<CoroutineDispatcher> dispatcher = qualifiedUiThread::class.java, CoroutineDispatcher::class.java);
```

```

### ### Lightweight

Use for tasks that never block and don't take too long to execute. Backed by a thread pool of N threads where N is the amount of parallelism available on the device (number of CPU cores)

Example:

```
```java
// Java
Qualified<Executor> liteExecutor = qualified(Lightweight.class, Executor.class);
```

```kotlin
// Kotlin
Qualified<CoroutineDispatcher> dispatcher = qualified(Lightweight::class.java, CoroutineDispatcher::class.java);
```
```

### ### Background

Use for tasks that may block on disk IO (use `@Blocking` for network IO or blocking on other threads). Backed by 4 threads.

Example:

```
```java
// Java
Qualified<Executor> bgExecutor = qualified(Background.class, Executor.class);
```

```kotlin
// Kotlin
Qualified<CoroutineDispatcher> dispatcher = qualified(Background::class.java, CoroutineDispatcher::class.java);
```
```

### ### Blocking

Use for tasks that can block for arbitrary amounts of time, this includes network IO.

Example:

```
```java
// Java
Qualified<Executor> blockingExecutor = qualified(Blocking.class, Executor.class);
```

```kotlin
// Kotlin
Qualified<CoroutineDispatcher> dispatcher = qualified(Blocking::class.java, CoroutineDispatcher::class.java);
```
```

### Other executors

#### Direct executor

```
{: .warning }
```

Prefer `@Lightweight` instead of using direct executor as it could cause dead locks and stack overflows.

For any trivial tasks that don't need to run asynchronously

Example:

```
```kotlin
FirebaseExecutors.directExecutor()
```
```

#### Sequential Executor

When you need an executor that runs tasks sequentially and guarantees any memory access is synchronized prefer to use a sequential executor instead of creating a `newSingleThreadedExecutor()`.

Example:

```
```java
// Pick the appropriate underlying executor using the chart above
Qualified<Executor> bgExecutor = qualified(Background.class, Executor.class);
// ...
Executor sequentialExecutor = FirebaseExecutors.newSequentialExecutor(c.get(bgExecutor));
```
```

## Proper Kotlin usage

A `CoroutineContext` should be preferred when possible over an explicit `Executor` or `CoroutineDispatcher`. You should only use an `Executor` at the highest (or inversely the lowest) level of your implementations. Most classes should not be concerned with the existence of an `Executor`.

Keep in mind that you can combine `CoroutineContext` with other `CoroutineScope` or `CoroutineContext`. And that all `suspend` functions inherit their `coroutineContext`:

```
```kotlin
suspend fun createSession(): Session {
    val context = backgroundDispatcher.coroutineContext + coroutineContext
    return Session(context)
}
```
```

To learn more, you should give the following Kotlin wiki page a read:

[Coroutine context and dispatchers](https://kotlinlang.org/docs/coroutine-context-and-dispatchers.html#dispatchers-and-threads)

## Testing

### Using Executors in tests

`@Lightweight` and `@Background` executors have `StrictMode` enabled and throw exceptions on violations. For example trying to do Network IO on either of them will throw.

With that in mind, when it comes to writing tests, prefer to use the common executors as opposed to creating your own thread pools. This will ensure that your code uses the appropriate executor and does not slow down all of Firebase by using the wrong one.

To do that, you should prefer relying on Components to inject the right executor even in tests. This will ensure your tests are always using the executor that is actually used in your SDK build. If your SDK uses Dagger, see [Dependency Injection]({{ site.baseurl }}{% link best\_practices/dependency\_injection.md %}) and [Dagger's testing guide](https://dagger.dev/dev-guide/testing).

When the above is not an option, you can use `TestOnlyExecutors`, but make sure you're testing your code with the same executor that is used in production code:

```
```kotlin
dependencies {
    // ...
    testImplementation(project(":integ-testing"))
    // or
    androidTestImplementation(project(":integ-testing"))
}
```
```

This gives access to

```
```java
TestOnlyExecutors.ui();
TestOnlyExecutors.background();
TestOnlyExecutors.blocking();
TestOnlyExecutors.lite();
```
```

### Policy violations in tests

Unit tests require [Robolectric](https://github.com/robolectric/robolectric) to function correctly, and this comes with a major drawback; no policy validation.

Robolectric supports `StrictMode` - but does not provide the backing for its policy mechanisms to fire on violations. As such, you'll be able to do things like using `TestOnlyExecutors.background()` to execute blocking actions; usage

that would have otherwise crashed in a real application.

Unfortunately, there is no easy way to fix this for unit tests. You can get around the issue by moving the tests to an emulator (integration tests)- but those can be more expensive than your standard unit test, so you may want to take that into consideration when planning your testing strategy.

### ### StandardTestDispatcher support

The `[kotlin.coroutines.test](https://kotlin.github.io/kotlinx.coroutines/kotlinx-coroutines-test/)` library provides support for a number of different mechanisms in tests. Some of the more famous features include:

- `[advanceUntilIdle](https://kotlin.github.io/kotlinx.coroutines/kotlinx-coroutines-test/kotlinx.coroutines.test/-test-coroutine-scheduler/advance-until-idle.html)`
- `[advanceTimeBy](https://kotlin.github.io/kotlinx.coroutines/kotlinx-coroutines-test/kotlinx.coroutines.test/-test-coroutine-scheduler/advance-time-by.html)`
- `[runCurrent](https://kotlin.github.io/kotlinx.coroutines/kotlinx-coroutines-test/kotlinx.coroutines.test/-test-coroutine-scheduler/run-current.html)`

These features are all backed by ``StandardTestDispatcher``, or more appropriately, the ``TestScope`` provided in a ``runTest`` block.

Unfortunately, ``TestOnlyExecutors`` does not natively bind with ``TestScope``. Meaning, should you use ``TestOnlyExecutors`` in your tests- you won't be able to utilize the features provided by ``TestScope``:

```
```kotlin
@Test
fun doesStuff() = runTest {
    val scope = CoroutineScope(TestOnlyExecutors.background().asCoroutineDispatcher())
    scope.launch {
        // ... does stuff
    }

    runCurrent() // doesn't invoke scope ??
}
```
```

To help fix this, we provide an extension method on ``TestScope`` called ``firebaseExecutors``. It facilitates the binding of ``TestOnlyExecutors`` with the current ``TestScope``.

For example, here's how you could use this extension method in a test:

```
```kotlin
@Test
fun doesStuff() = runTest {
```

```

    val scope = CoroutineScope(firebaseExecutors.background)
    scope.launch {
        // ... does stuff
    }

    runCurrent()
}
...

# Dependencies
{: .no_toc}

1. TOC
{:toc}

```

This page gives an overview of the different dependency types supported by the Components Framework.

## ## Background

As discussed in [\[Firebase Components\]](#)([{{ site.baseurl }}{% link components/components.md %}](#)), in order for a `Component` to be injected with the things it needs to function, it has to declare its dependencies. These dependencies are then made available and injected into `Components` at runtime.

Firebase Components provide different types of dependencies.

## ## Lazy vs Eager dependencies

When it comes to initialize a component, there are 2 ways of provide its dependencies.

### ### Direct Injection

With this type of injection, the component gets an instance of its dependency directly.

```

```kotlin
class MyComponent(private val dep : MyDep) {
    fun someMethod() {
        dep.use();
    }
}
```

```

As you can see above the component's dependency is passed by value directly, which means that the dependency needs to be fully initialized before it's handed off to the requesting component. As a result `MyComponent` may have to pay the cost of initializing `MyDep` just to be created.

### ### Lazy/Provider Injection

With this type of injection, instead of getting an instance of the dependency directly, the dependency is passed into the `Component` with the help of a `com.google.firebase.inject.Provider`

```
```java
public interface Provider<T> { T get(); }
```

```kotlin
class MyComponent(private val dep : Provider<MyDep>) {
    fun someMethod() {
        // Since all components are singletons, each call to
        // get() will return the same instance.
        dep.get().use();
    }
}
```
```

On the surface this does not look like a big change, but it has an important side effect. In order to create an instance of `MyComponent`, we don't need to initialize `MyDep` anymore. Instead, initialization can be delayed until `MyDep` is actually used.

It is also beneficial to use a `Provider` in the context of [Play's dynamic feature delivery](https://developer.android.com/guide/playcore/feature-delivery).

See [Dynamic Module Support]({{ site.baseurl }}{% link components/dynamic\_modules.md %}) for more details.

### ## Required dependencies

This type of dependency informs the `ComponentRuntime` that a given `Component` cannot function without a dependency.

When the dependency is missing during initialization, `ComponentRuntime` will throw a `MissingDependencyException`.

This type of dependency is useful for built-in components that are always present like `Context`, `FirebaseApp`, `FirebaseOptions`, [Executors]({{ site.baseurl }}{% link components/executors.md %}).

To declare a required dependency use one of the following in your `ComponentRegistrar`:

```
```java
// Required directly injected dependency
.add(Dependency.required(MyDep.class))
// Required lazily injected dependency
.add(Dependency.requiredProvider(MyOtherDep.class))
.factory( c -> new MyComponent(c.get(MyDep.class), c.getProvider(MyOtherDep.class)))
.build();
```
```

## ## Optional Dependencies

This type of dependencies is useful when your `Component` can operate normally when the dependency is not available, but can have enhanced functionality when present. e.g. `Firestore` can work without `Auth` but provides secure database access when `Auth` is present.

To declare an optional dependency use the following in your `ComponentRegistrar`:

```
```java
.add(Dependency.optionalProvider(MyDep.class))
.factory(c -> new MyComponent(c.getProvider(MyDep.class)))
.build();
```
```

The provider will return `null` if the dependency is not present in the app.

{: .warning }

When the app uses [Play's dynamic feature delivery](https://developer.android.com/guide/playcore/feature-delivery),

`provider.get()` will return your dependency when it becomes available. To support this use case, don't store references to the result of `provider.get()` calls.

See [Dynamic Module Support]({{ site.baseurl }}{% link components/dynamic\_modules.md %}) for details

{: .warning }

See Deferred dependencies if you your dependency has a callback based API

## ## Deferred Dependencies

Useful for optional dependencies which have a listener-style API, i.e. the dependent component registers a listener with the dependency and never calls it again (instead the dependency will call the registered listener). A good example is `Firestore`'s use of `Auth`, where `Firestore` registers a token change listener to get notified when a new token is available. The problem is that when `Firestore` initializes, `Auth` may not be present in the app, and is instead part of a dynamic module that can be loaded at runtime on demand.

To solve this problem, Components have a notion of a `Deferred` dependency. A deferred is defined as follows:

```
```java
public interface Deferred<T> {
    interface DeferredHandler<T> {
        @DeferredApi
        void handle(Provider<T> provider);
    }

    void whenAvailable(DeferredHandler<T> handler);
}
```
```

To use it a component needs to call `Dependency.deferred(SomeType.class)`:

```
```kotlin
class MyComponent(deferred: Deferred<SomeType>) {
    init {
        deferred.whenAvailable { someType ->
            someType.registerListener(myListener)
        }
    }
}
```
```

See [\[Dynamic Module Support\]](#)(`{{ site.baseurl }}{% link components/dynamic_modules.md %}`) for details

## ## Set Dependencies

The Components Framework allows registering components to be part of a set, such components are registered explicitly to be a part of a `Set<T>` as opposed to be a unique value of `T`:

```
```java
// Sdk 1
Component.intoSet(new SomeTypeImpl(), SomeType.class);
// Sdk 2
Component.intoSetBuilder(SomeType.class)
    .add(Dependency(SomeDep.class))
    .factory(c -> new SomeOtherImpl(c.get(SomeDep.class)))
    .build();
```
```

With the above setup each SDK contributes a value of `SomeType` into a `Set<SomeType>` which becomes available as a `Set` dependency.

To consume such a set the interested `Component` needs to declare a special kind of dependency in one of 2 ways:

- \* `Dependency.setOf(SomeType.class)`, a dependency of type `Set<SomeType>`.
- \* `Dependency.setOfProvider(SomeType.class)`, a dependency of type `Provider<Set<SomeType>>`. The advantage of this is that the `Set` is not initialized until the first call to `provider.get()` at which point all elements of the set will get initialized.

{: .warning }

Similar to optional `Provider` dependencies, where an optional dependency can become available at runtime due to [\[Play's dynamic feature delivery\]](https://developer.android.com/guide/playcore/feature-delivery)(<https://developer.android.com/guide/playcore/feature-delivery>), `Set` dependencies can change at runtime by new elements getting added to the set. So make sure to hold on to the original `Set` to be able to observe new values in it as they are added.

Example:

```
```kotlin
class MyClass(private val set1: Set<SomeType>, private val set2: Provider<Set<SomeOtherType>>)
```

```java
Component.builder(MyClass.class)
    .add(Dependency.setOf(SomeType.class))
    .add(Dependency.setOfProvider(SomeOtherType.class))
    .factory(c -> MyClass(c.setOf(SomeType.class), c.setOfProvider(SomeOtherType.class)))
    .build();
```
```

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or

Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.
