

June 6, 2016

To whom it may concern,

Acumen Security verified that the following software faithfully embeds a FIPS 140 cryptographic module,

- Cisco Prime Collaboration Provisioning, version 11.2

During the course of the review, Acumen Security confirmed that the following cryptographic module is properly incorporated into the product:

- Cisco FIPS Object Module, version 4.1, Cert #2100

Acumen Security confirmed that the following features, **Protected Communication (TLS)** and **Secure Logging (HTTPS)**, leverage the above referenced embedded cryptographic module to provide cryptographic services, including,

1. Session establishment supporting each service,
2. All underlying cryptographic algorithms supporting each services' key derivation functions,
3. Hashing for each service,
4. Symmetric encryption for each service,
5. Asymmetric encryption for each service,
6. Diffie-Hellman Key Exchange for each service.

Additionally, Acumen Security confirmed that the product leverages the above referenced cryptographic module to perform symmetric cryptography in support of **Encrypted Password Storage**.

Acumen security confirmed that the above referenced embedded cryptographic module is initialized in a manner consistent with the instructions provided in the non-proprietary Security Policy. Details of the verification may be obtained from Cisco Systems, Inc. at the request of the interested parties. This letter represents the independent opinions of Acumen Security and does not imply endorsement of the product by the CMVP or any other parties.

Sincerely,

Ashit Vora

Lab Director
