San Jose, CA 95134
USA

To Whom It May Concern:

Gossamer Security Solutions, Inc. (hereinafter referred to as the “Gossamer”) completed its FIPS testing on the **Cisco Firepower Management Center Virtual (FMCv) Cryptographic Module** with the software version **v6.1** (the “Product”) and submitted the conformance report (TID-28-60d1-4749) to CMVP for validation on March 30, 2017. The submission is currently in CMVP coordination phase.

Specifically, Gossamer’s tests confirmed that:

1. All cryptographic algorithms used for SSHv2 are provided from Cisco FMC FOM (v6.0) algorithm implementation.
2. All cryptographic algorithms used for HTTPS/TLS are provided from Cisco FMC FOM (v6.0) algorithm implementation.

It is important to note that the above services support algorithms/key lengths that are no longer allowed by NIST Special Publication 800-131A. Please strictly follow up the steps in Security Policy, section Secure Operation to operate the module in the FIPS mode.

Details of Gossamer’s review, which consisted of source code review and operational testing, are obtainable by special request.

The intention of this letter is to provide independent opinion that the Product correctly integrates and uses validated cryptographic modules within the scope of claims indicated above. Gossamer offers no warranties or guarantees with respect to the above described compliance review. This letter does not imply a Gossamer certification or product endorsement.

Please let us know if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ed Morris', written over a light blue horizontal line.

Edward D. Morris
Laboratory Director
