Tech Support

Initiating a Tech Support log collection attempts to query all data stores. It builds a snapshot of the current state of the system. A notification appears after the log collection is completed. You can download the log anytime.

Log Collection

Cisco Nexus Dashboard Fabric Controller allows you to collect and download logs for troubleshooting.

Click **Begin data collection** to collect logs for troubleshooting purposes.

Click **Restart log collection** to begin collecting logs. This action deletes the existing technical support logs on the server. After the collection is complete, you can download the logs for troubleshooting purposes.

Click **Download log** to download the logs to your local directory. The logs are downloaded with `.zip` extension.
