

Backup and Restore Database

This chapter describes the tasks to backup and restore Cisco Optical Site Manager database.

Table 1: Feature History

Feature Name	Release Information	Description
Backup and Restore Database	Cisco IOS XR Release 24.3.1	Cisco Optical Site Manager now supports backup and restore for both its own database and the databases of the devices it manages. When unexpected failures occur, such as hardware malfunctions or software corruption, your data is securely backed up and easily recoverable.

Figure 1: Back Up and Restore Database

Database Backup and Restore

Cisco Optical Site Manager allows the backup of its own database as well as the databases of the devices it manages, ensuring that data can be restored in case of disaster. Backups are executed and stored within the device on which Cisco Optical Site Manager is installed and are accessible through the Cisco Optical Site Manager web user interface.

Backup and Download Database

Backing up the Cisco Optical Site Manager database ensures data integrity and availability in case of unexpected failures, such as hardware malfunctions or software corruption. By maintaining regular backups, administrators can quickly restore the system to its last known good state, minimizing downtime and operational disruptions.

Use this task to back up and download the database for both Cisco Optical Site Manager and the devices it manages.

Before you begin

[Log into Cisco Optical Site Manager](#)

Procedure

- Step 1** Click **Database** in the left panel.
- Step 2** Click the **Backup** button.
A confirmation dialog box appears.
- Step 3** (Optional) Enable the **Stop on Error** toggle button to stop the backup process if any of the selected devices for backup are disconnected, unresponsive, or locked.
- Step 4** Click **Yes** to start the backup.

The *Logs Summary* section displays the backedup components, their status, and timestamps.
The DBBACKUP-IN-PROGRESS alarm is triggered and can be viewed in the **Alarms** tab of the **Fault Monitoring** menu.
- Step 5** Click the backup file name under **Back Up Information** to download entire backup as a ZIP file on your local system.
-

Restore Database

When performing a restore operation, you restore Cisco Optical Site Manager and its managed devices database to the state it was in at the backup time. You can choose to restore only the Cisco Optical Site Manager database, only one or multiple managed devices database, or both simultaneously.

Use this task to restore the database of either the Cisco Optical Site Manager or the devices it manages.

Before you begin

[Log into Cisco Optical Site Manager](#)

Procedure

-
- Step 1** Click **Database** in the left panel.
- Step 2** Click the **Restore Options** button.
The **Choose a Restore Option** dialog box appears.
- Step 3** Do one of the following to restore the database:

Note When restoring the Cisco Optical Site Manager or full database on the host device, the Cisco Optical Site Manager becomes temporarily unavailable.

To restore	click the <i>Restore</i> button
only Cisco Optical Site Manager database,	in the <i>COSM</i> section.
only the managed devices database,	in the <i>Devices</i> section after selecting the one or all check boxes corresponding to the devices for which you want to restore the data.
both Cisco Optical Site Manager and the managed devices database,	in the <i>Full</i> section.

A confirmation dialog box appears.

- Step 4** (Optional) Enable the **Stop on Error** toggle button to stop the restore process if any of the selected devices for restore are disconnected, unresponsive, or locked.
- Step 5** Click **Yes** to start the restore process.

The *Logs Summary* section displays the restored components, their status, and timestamps.

The DBREST-IN-PROGRESS alarm is triggered and can be viewed in the **Alarms** tab of the **Fault Monitoring** menu.

Upload Database

While multiple backups can be created, only the most recent backup is available for download and restoration. You may need to upload and restore your database in the following situations:

- **Reinstall Cisco Optical Site Manager:** If you need to reinstall Cisco Optical Site Manager, uploading the backup file allows you to restore the data to its state prior to the re-installation.
- **Database Transfer Between Nodes:** Copy the database from one device to another by backing up from the source device and uploading it on the destination device.

Use this task to upload the database from a downloaded backup ZIP file.

Before you begin

[Log into Cisco Optical Site Manager](#)

Procedure

- Step 1** Click **Database** in the left panel.
- Step 2** Click the **Upload Backup** button.
The **Upload DB Backup** dialog box appears.
- Step 3** Click **Select Files** to select a ZIP file.
- Tip** You can also drag and drop the backup ZIP file in the **Upload DB Backup** dialog box.
- Step 4** Click **Upload** to upload the backup.
The uploaded backup file is displayed under **Back Up Information**.
