

Release Notes for Cisco Transport Planner, Release 9.8

Revised: 24 April 2013, OL-29157-01

Release notes contain the new features and enhancements for the Cisco Transport Planner (CTP). For detailed information regarding features, capabilities, hardware, and software introduced with this release, refer to the Release 9.8 version of the *Cisco Transport Planner DWDM Operations Guide*.

Cisco also provides Bug Toolkit, a web resource for tracking defects. To access Bug Toolkit, visit the following URL:

<http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>

Contents

- [Software and Hardware Requirements, page 1](#)
- [Using the Bug ToolKit, page 3](#)
- [New Features and Functionality, page 5](#)
- [Related Documentation, page 6](#)
- [Obtaining Documentation and Submitting a Service Request, page 6](#)

Software and Hardware Requirements

Before you begin to install CTP Release 9.8, you must check if your system meets the minimum software and hardware requirements. This section describes the software and hardware requirements for CTP Release 9.8.

- [Operating System Requirements](#)
- [Supported Java Runtime Environment](#)
- [Hardware Requirements](#)

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

Operating System Requirements

CTP Release 9.8 runs on systems with the following operating systems:

- Microsoft Windows 2000 Professional
- Microsoft Windows XP Professional
- Microsoft Vista Business
- Microsoft Windows 7 Professional
- Linux

Note

Microsoft Windows XP Professional is the preferred operating system for CTP Release 9.8.

Supported Java Runtime Environment

CTP Release 9.8 requires that you install Java Runtime Environment Version 1.6 or Version 1.7.

You can download it from this URL:

<http://www.oracle.com/technetwork/java/javase/downloads/index.html>

Hardware Requirements

CTP Release 9.8 runs on systems with the following hardware configurations:

Hardware	Minimum Requirements	Typical Requirements	Recommended Requirements
CPU	Intel Pentium Processor 800 MHz	Intel Pentium Processor 1.4 GHz	Intel Pentium Processor 1.7 GHz
Memory	512 MB RAM	1 GB RAM	2 GB RAM or more
Video Resolution	1024x768	1280x1024	1280x1024

Customizing Memory Usage for JVM

CTP Release 9.8 allows you to customize the maximum amount of memory to be used by the Java Virtual Machine (JVM). The default value of 512 MB is appropriate for use with the recommended hardware (1GB of RAM).

For hardware using less physical memory, it is recommended that you reduce the maximum amount of memory to be used by the JVM. This reduction prevents the system from using system virtual memory, which results in poorer system performance.

If you reduce the amount of memory dedicated to JVM, Cisco Transport Planner may generate an Out of Memory error in the case of a complex design, typically when designing an any-to-any traffic design with a large number of nodes. In such cases, it is recommended that you increase the memory size.

Allowing JVM to use too much memory compared to the available RAM can instead result in very low system performances due to the use of virtual memory. The following table lists the recommended settings:

System RAM	Minimum JVM Memory	Maximum JVM Memory	Suggested JVM Memory
512 MB	256 MB	450 MB	350 MB
1 GB	512 MB	900 MB	700 MB
2 GB or more	1024 MB	1800 MB	1450 MB

To change the maximum amount of memory to be used by the JVM, you need to edit the *Startup.properties* file, which is available in the directory where you saved the *ctp.jar* file during installation. Replace the default value (512 MB) with the appropriate one from the Suggested JVM Memory column of the preceding table. Save the file and restart the Cisco Transport Planner for the changes to take effect.

**Note**

The suggested memory values are for a system with fairly less load. If there are many processes running on your system, changing to the suggested memory value may not launch CTP. In such cases, reduce the JVM memory appropriately (you may reduce the memory in granularity of 100 MB) by editing the *Startup.properties* file.

Using the Bug ToolKit

Use the Bug ToolKit to view the list of outstanding and resolved bugs in CTP Release 9.8. This section explains how to use the Bug ToolKit.

-
- Step 1** Go to <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>. You will be prompted to log into Cisco.com. After you login, the Bug Toolkit page opens.
- Step 2** To search for a specific bug, enter the bug ID in the **Search for Bug ID** field and click **Go** in the **Search Bugs** tab.
- To search for all the bugs in a specified release, enter the following search criteria in the **Search Bugs** tab:
- Select Product Category—Select **Optical Networking**.
 - Select Products—Select **Cisco DWDM Design Tool** from the list.
 - Software Version—Select **9.8** to view the list of outstanding and resolved bugs in CTP, Release 9.8.
 - Search for Keyword(s)—Separate search phrases with boolean expressions (AND, NOT, OR) to search within the bug title and details.

- **Advanced Options**—You can either perform a search using the default search criteria or define custom criteria for an advanced search. To customize the advanced search, select **Use custom settings for severity, status, and others** and provide the following information:
 - **Severity**—Check the check box for the severity level.
 - **Status**—Check the check box corresponding to **Open**, **Fixed**, or **Terminated**.

Select **Open** to view all the open bugs. To filter the open bugs, uncheck the **Open** check box and select the appropriate sub-options that appear below the Open check box. The sub-options are Assigned, Forwarded, Held, Information Required, More, New, Open, Postponed, Submitted, and Waiting. For example, select **New** if you want to view only new bugs in CTP Release 9.8.

Select **Fixed** to view fixed bugs. To filter fixed bugs, uncheck the **Fixed** check box and select the appropriate sub-options that appear below the Fixed check box. The sub-options are Resolved and Verified.

Select **Terminated** to view terminated bugs. To filter terminated bugs, uncheck the **Terminated** check box and select the appropriate sub-options that appear below the Terminated check box. The sub-options are Closed, Junked, and Unreproducible.

You can select multiple options as required.
 - **Advanced**—Check the **Show only bugs containing bug details** check box to view only those bugs that contain detailed information, such as symptoms and workarounds. Check the **Include only bugs available to customers** check box to view only those bugs that are customer facing.
 - **Modified Date**—Use this option to filter bugs based on the time duration within which the bugs were last modified. Select the appropriate option from the drop-down list.
 - **Results Displayed Per Page**—Select the appropriate option from the drop-down list to restrict the number of results that appear per page.

Step 3 Click **Search**. The Bug Toolkit displays the list of bugs based on the specified search criteria.

Export to Spreadsheet

The Bug ToolKit provides the following options to export bugs to a spreadsheet:

- Click **Export All to Spreadsheet** link in the Search Results page under the Search Bugs tab. Specify the file name and folder name to save the spreadsheet. All the bugs retrieved by the search will be exported.
- Click **Export All to Spreadsheet** link in the My Notifications tab. Specify the file name and folder name to save the spreadsheet. All the saved bugs in all the groups will be exported.

If you are unable to export the spreadsheet, log into the Technical Support Website at <http://www.cisco.com/cisco/web/support/index.html> for more information, or call Cisco TAC (1-800-553-2447).

New Features and Functionality

This section highlights new features and functionality supported by CTP Release 9.8. For detailed documentation of each of these features, refer to the *Cisco Transport Planner DWDM Operations Guide*.

Common Hardware

The new hardware supported by CTP Release 9.8 are:

- [AC2 power module, page 5](#)
- [CRS line card, page 5](#)
- [MPO-MPO cables, page 5](#)
- [Pluggables, page 5](#)
- [WSE Card, page 5](#)

AC2 power module

The 15454-M6-AC2 is the next generation power module for the ONS 15454 M6 shelf. It has a higher rating as compared to 15454-M6-AC. The 15454-M6-AC2 is capable of powering the ONS 15454 M6 shelf under maximum load. It supports upto 1200W for the US nominal range and upto 1500W for the Europe nominal range.

CRS line card

Support for CRS line card (1-100GE-DWDM) for OTU4 and 100GE service types.

MPO-MPO cables

CTP supports MPO-MPO (ONS-CCC-100G-5=) cables for the 100GE and OTU4 service types.

Pluggables

CTP supports the ONS-SI-GE-EX pluggable on ADM-10G, AR-XP, GE-XPE, MXP_MR_10DMEX, and MXP_MR_10DME cards.

WSE Card

The Wire Speed Encryption (WSE) card is an optical line card that provides the encryption capability at the optical layer to the Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms. The WSE card can be used to secure different network topologies built using Cisco devices and also devices from other vendors. The card provides confidentiality and integrity of the data sent over a fiber optic communication channel through Next Generation Cryptography. The card provides integrated transponder functionality in addition to providing encryption.

Software Features

The new software features of Cisco Transport Planner, Release 9.8 are listed in [Table 1](#).

Table 1 *New Features in Cisco Transport Planner, Release 9.8*

Features	Description
Bidirectional communication between CTP and CTC	Support for importing these cards during bidirectional communication with the network element: <ul style="list-style-type: none"> • 100G-LC-C and 10X10G-LC cards • 100G-LC-C + CFP-LC, 100G-ME-C + CFP-LC and 100G-LC-C + 10X10G-LC cards • TNC-E and TSC-E cards
