

# Release Notes for Cisco 4000 Series ISRs, Cisco IOS XE Everest 16.6

---

**First Published:** 2017-07-28

**Last Modified:** 2017-07-28

## Cisco 4000 Series Integrated Services Routers Overview

**Note** Explore the [Content Hub](#), the all new portal that offers an enhanced product documentation experience.

- Use faceted search to locate content that is most relevant to you.
- Create customized PDFs for ready reference.
- Benefit from context-based recommendations.

Get started with the Content Hub at [content.cisco.com](http://content.cisco.com) to craft a personalized documentation experience.

Do provide feedback about your experience with the Content Hub.

---

The Cisco 4000 Series ISRs are modular routers with LAN and WAN connections that can be configured by means of interface modules, including Cisco Enhanced Service Modules (SM-Xs), and Network Interface Modules (NIMs).

**Note** The Cisco IOS XE Bengaluru 17.4.1a is the first release for Cisco 4000 Series Integrated Services Routers in the Cisco IOS XE Bengaluru 17.4.1 release series.

The following table lists the router models that belong to the Cisco 4000 Series ISRs.

Cisco 4400 Series ISR	Cisco 4300 Series ISR	Cisco 4200 Series ISR
Cisco 4431 ISR	Cisco 4321 ISR	Cisco 4221 ISR
Cisco 4451 ISR	Cisco 4331 ISR	
Cisco 4461 ISR	Cisco 4351 ISR	

## System Requirements

The following are the minimum system requirements:

---

**Note** There is no change in the system requirements from the earlier releases.

---

- Memory: 4GB DDR3 up to 16GB
- Hard Drive: 200GB or higher (Optional). (The hard drive is only required for running services such as Cisco ISR-WAAS.)
- Flash Storage: 4GB to 32GB

---

**Note** There is no change in the flash storage size from the earlier releases. The flash storage size must be equal to the system memory size.

---

- NIMs and SM-Xs: Modules (Optional)
- NIM SSD (Optional)

For more information, see the [Cisco 4000 Series ISRs Data Sheet](#).

## Determining the Software Version

You can use the following commands to verify your software version:

- For a consolidated package, use the **show version** command
- For individual sub-packages, use the **show version installed** command

## Upgrading to a New Software Release

To install or upgrade, obtain a Cisco IOS XE Gibraltar 16.12.1a consolidated package (image) from Cisco.com. You can find software images at <http://software.cisco.com/download/navigator.html>. To run the router using individual sub-packages, you also must first download the consolidated package and extract the individual sub-packages from a consolidated package.

---

**Note** When you upgrade from one Cisco IOS XE release to another, you may see *%Invalid IPV6 address* error in the console log file. To rectify this error, enter global configuration mode, and re-enter the missing IPv6 alias commands and save the configuration. The commands will be persistent on subsequent reloads.

---

For more information on upgrading the software, see the [How to Install and Upgrade the Software](#) section of the Software Configuration Guide for the Cisco 4000 Series ISRs.

## Recommended Firmware Versions

[Table 1: Recommended Firmware Versions, on page 3](#) provides information about the recommended Rommon and CPLD versions for releases prior to Cisco IOS XE Everest 16.4.1.

Table 1: Recommended Firmware Versions

Cisco 4000 Series ISRs	Existing RoMmon	Cisco Field-Programmable Devices
Cisco 4451 ISR	16.7(4r)	15010638 <b>Note</b> Upgrade CLI output has a typo and it would show the version incorrectly as 15010738 instead of 15010638. This does not impact the upgrade.
Cisco 4431 ISR	16.7(4r)	15010638 <b>Note</b> Upgrade CLI output has a typo and it would show the version incorrectly as 15010738 instead of 15010638. This does not impact the upgrade.
Cisco 4351 ISR	16.7(5r)	14101324
Cisco 4331 ISR	16.7(5r)	14101324
Cisco 4321 ISR	16.7(5r)	14101324
Cisco 4221 ISR	16.7(5r)	14101324

## Upgrading the ROMMON Version on the Cisco 4000 Series ISR

For information about ROMMON compatibility matrix, and ROMMON upgrading procedure, see the ROMMON Compatibility Matrix and "ROMMON Overview and Basic Procedures" sections in the [Upgrading Field-Programmable Hardware Devices for Cisco 4000 Series ISRs](#).

## Upgrading Field-Programmable Hardware Devices

The hardware-programmable firmware is upgraded when Cisco 4000 Series ISR contains an incompatible version of the hardware-programmable firmware. To do this upgrade, a hardware-programmable firmware package is released to customers.

Generally, an upgrade is necessary only when a system message indicates one of the field-programmable devices on the Cisco 4000 Series ISR needs an upgrade, or a Cisco technical support representative suggests an upgrade.

From Cisco IOS XE Release 3.10S onwards, you must upgrade the CPLD firmware to support the incompatible versions of the firmware on the Cisco 4000 Series ISR. For upgrade procedures, see the [Upgrading Field-Programmable Hardware Devices for Cisco 4000 Series ISRs](#).

## Feature Navigator

You can use Cisco Feature Navigator to find information about feature, platform, and software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on cisco.com is not required.

## Limitations and Restrictions

The following limitations and restrictions apply to all releases:

- [Cisco Unified Threat Defense](#), on page 4

- [Cisco ISR-WAAS and AppNav-XE Service, on page 4](#)
- [USB Etoken, on page 5](#)

## Accessing RSA Key and SSH

When you downgrade the Cisco 4000 Series ISR from IOS XE version 16.6.1 or a later release to a pre-16.6.1 release, including 16.3.X, the RSA key-pairs that are stored in private configuration storage are not accessible, and as a result, the SSH access is lost. This occurs because a secure storage feature was introduced and enabled by default starting with IOS XE version 16.6.1 which is not supported in pre-16.6.1 releases. After you downgrade, if you want to retain the access to RSA key-pair and SSH, use the **no service private-config-encryption** command in global configuration mode.

## Smart Licensing

Ensure that the device is running the Cisco IOS XE Everest 16.6.1 version that supports the Smart Licensing mode.

For a more detailed overview on Cisco Licensing, go to <https://cisco.com/go/licensingguide>.

## Cisco Unified Threat Defense

The Cisco Unified Threat Defense (UTD) service requires a minimum of 1 to 4 GB of DRAM.

## Cisco ISR-WAAS and AppNav-XE Service

The Cisco ISR-WAAS/AppNav service requires a system to be configured with a minimum of 8GB of DRAM and 16GB flash storage. For large service profiles, 16GB of DRAM and 32GB flash storage is required. Also, Cisco ISR-WAAS requires a minimum of 200GB SSD.

## IPsec Traffic

IPsec traffic is restricted on the Cisco ISR 4451-X. The router has the same IPsec functionality as a Cisco ISR G2. The default behavior of the router will be as follows (unless an HSECK9 license is installed):

- If the limit of 1000 concurrent IPsec tunnels is exceeded, no more tunnels are allowed and the following error message appears:

```
%CERM-4-TUNNEL_LIMIT: Maximum tunnel limit of 225 reached for Crypto functionality with securityk9 technology package license.
```

- The throughput encrypted traffic supports 85 Mbps.
- The Cisco 4000 Series ISR does not currently support nested SA transformation such as:

```
crypto ipsec transform-set transform-1 ah-sha-hmac esp-3des esp-md5-hmac
crypto ipsec transform-set transform-1 ah-md5-hmac esp-3des esp-md5-hmac
```

- The Cisco 4000 Series ISR does not currently support COMP-LZS configuration.

## CUBE-SRTP Calls

Cisco IOS XE Everest release 16.5.1 is not recommended for Cisco Unified Border Element deployment involving SRTP calls.

## USB Etoken

USB Etoken is not supported on Cisco IOS XE Denali 16.2.1.

## Unified Communication on Cisco 4000 Series ISR

- For T1/E1 clocking design and configuration changes, For detailed information, see the following Cisco document: [T1/E1 Voice and WAN Configuration Guide](#).
- For Cisco ISR 4000 Series UC features interpretation with CUCM versions, For detailed information, see the following Cisco document: [Compatibility Matrix](#).
- For High density DSPfarm PVDM (SM-X-PVDM) and PVDM4 DSP planning, For detailed information, see the following Cisco document: [DSP Calculator for DSP planning](#).

## Yang Data Models

Effective with Cisco IOS XE Everest 16.5.1b, the Cisco IOS XE YANG models are available in the form of individual feature modules with new module names, namespaces and prefixes. Revision statements embedded in the YANG files indicate if there has been a model revision.

Navigate to <https://github.com/YangModels/yang> > vendor > cisco > xe > 1651, to see the new, main cisco-IOS-XE-native module and individual feature modules attached to this node.

There are also XPATH changes for the access-list in the *Cisco-IOS-XE-acl.yang* schema.

The *README.md* file in the above Github location highlights these and other changes with examples.

## New Features and Important Notes About Cisco 4000 Series ISRs Release Everest 16.6

This section describes new features in Cisco IOS XE Everest 16.6 that are supported on the Cisco 4000 Series ISRs.

### New and Changed Information

#### New Software Features in Cisco 4000 Series ISR Release Cisco IOS XE Everest 16.6.2

The following features are supported by the Cisco 4000 Series Integrated Services Routers for Cisco IOS XE Everest 16.6.2:

- Dying Gasp Support on Cisco 4000 Series ISRs—For detailed information, see the following Cisco document: [Carrier Ethernet Configuration Guide](#).
- Encrypted Traffic Analytics—For detailed information, see the following Cisco document: [https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/sec\\_data\\_eta/configuration/xe-16-6/sec-data-encrypted-traffic-analytics-xe-16-6-book.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/sec_data_eta/configuration/xe-16-6/sec-data-encrypted-traffic-analytics-xe-16-6-book.html) and <https://www.cisco.com/c/dam/en/us/td/docs/solutions/CVD/Campus/CVD-Encrypted-Traffic-Analytics-Deployment-Guide-2017DEC.pdf>.
- Enable Allowedlist Support for Encrypted Traffic Analytics—For detailed information, see the following Cisco document: <https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/netflow/configuration/xe-16-6/nf-xe-16-6-book/encrypted-traffic-analytics.html>.
- Enable TLS Labels, App ID, and Multi Destination Support—For detailed information, see the following Cisco document: <https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/netflow/configuration/xe-16-6/nf-xe-16-6-book/encrypted-traffic-analytics.html>.

## New Hardware Features in Cisco IOS XE Everest 16.6.1

There are no new hardware features in this release.

## New Software Features in Cisco 4000 Series ISR Release Cisco IOS XE Everest 16.6.1

The following features are supported by the Cisco 4000 Series Integrated Services Routers for Cisco IOS XE Everest 16.6.1:

- For information on migrating from existing Cisco IOS XE 3S releases to the Cisco IOS XE Everest 16.6.1 release, see [Cisco IOS XE Everest 16.4.1 Migration Guide for Access and Edge Routers](#).
- Supported Technology Configuration Guides—When a technology is supported on Cisco 4000 series ISR, the corresponding technology configuration guide is displayed on the product landing page.
- BGP Feature Monitoring—For detailed information, see the following Cisco document: <http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/datamodels/configuration/xe-16/data-models-xe-16-book.html>.
- Caller-ID and Directory Lookup for SIP Phones on Unified CME—For detailed information, see the following Cisco document: [http://www.cisco.com/c/en/us/td/docs/voice\\_ip\\_comm/cucme/admin/configuration/manual/cmeadm/cmedirs.html](http://www.cisco.com/c/en/us/td/docs/voice_ip_comm/cucme/admin/configuration/manual/cmeadm/cmedirs.html).
- HTTPS: UC Gateway Services API—For detailed information, see the following Cisco document: [http://www.cisco.com/c/en/us/td/docs/voice\\_ip\\_comm/cucme/CUCIS\\_API/CUCIS\\_API\\_Guide.html](http://www.cisco.com/c/en/us/td/docs/voice_ip_comm/cucme/CUCIS_API/CUCIS_API_Guide.html).
- IPv6 Support for Cisco Unified SIP SRST—For detailed information, see the following Cisco document: [http://www.cisco.com/c/en/us/td/docs/voice\\_ip\\_comm/cust/admin/sip\\_srst/configuration/guide/SCCP\\_and\\_SIP\\_SRST\\_Admin\\_Guide/sst\\_overview.html](http://www.cisco.com/c/en/us/td/docs/voice_ip_comm/cust/admin/sip_srst/configuration/guide/SCCP_and_SIP_SRST_Admin_Guide/sst_overview.html).
- ISIS - SR OAM: ISIS FEC—For detailed information, see the following Cisco document: [https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/seg\\_routing/configuration/xe-16/seg-16-6-book/oam-entropy-label-support.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/seg_routing/configuration/xe-16/seg-16-6-book/oam-entropy-label-support.html).
- MLPPPoE on PPP Termination and Aggregation Router—For detailed information, see the following Cisco document: [http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/wan\\_mlp/configuration/xe-16/wan-mlp-xe-16-book/wan-mlppp-eth-pta-xe.html](http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/wan_mlp/configuration/xe-16/wan-mlp-xe-16-book/wan-mlppp-eth-pta-xe.html).
- NID Support—For detailed information, see the following Cisco document: <https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/cether/configuration/xe-16-6/ce-xe-16-6-book/ce-nid-support.html>.
- NTT for NIM-BRI on Cisco 4000 Series ISR—Effective with Cisco IOS XE Everest 16.6.1 release, the ISDN switch type NTT on BRI network interface modules is supported on Cisco 4000 Series Integrated Services Routers, to enable seamless migration from Cisco G2 Series Integrated Services Routers.
- NGE TDM-IP (SIP) Support on Cisco 4000 Series ISR—Effective with Cisco IOS XE Everest 16.6.1, Next Generation Encryption (NGE) support is added for TDM-IP SIP in Cisco 4000 Series ISRs. NGE provides stronger encryption algorithm. With NGE, both signaling and media can be protected by the next generation cipher suites.
- QoS on GEC Portchannel on Cisco 4000 Series ISR—For detailed information, see the following Cisco document: [https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos\\_mqc/configuration/xe-16-6/qos-mqc-xe-16-6-book/aggregate-etherchannel-quality-of-service.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos_mqc/configuration/xe-16-6/qos-mqc-xe-16-6-book/aggregate-etherchannel-quality-of-service.html).
- Report Client-IP to Umbrella Cloud—For detailed information, see the following Cisco document: [http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/sec\\_data/configuration/xe-16/sec-data-umbrella-bran-xe-16-book/sec-data-umbrella-bran.html](http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/sec_data/configuration/xe-16/sec-data-umbrella-bran-xe-16-book/sec-data-umbrella-bran.html).
- RESTCONF Programmability Interface Feature—For detailed information, see the following Cisco document: [https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/prog/configuration/166/b\\_166\\_programmability\\_cg.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/prog/configuration/166/b_166_programmability_cg.html).

- Radio Aware Routing—For detailed information, see the following Cisco document:  
[http://www.cisco.com/c/en/us/td/docs/routers/access/4400/software/configuration/guide/isr4400swcfg/isr4400swcfg\\_chapter\\_010010.html](http://www.cisco.com/c/en/us/td/docs/routers/access/4400/software/configuration/guide/isr4400swcfg/isr4400swcfg_chapter_010010.html).
- SD-AVC Auto-update Capability—For detailed information, see the following Cisco document:[https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos\\_nbar/configuration/xs-16-6/qos-nbar-xe-16-6-book.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos_nbar/configuration/xs-16-6/qos-nbar-xe-16-6-book.html).
- SD-AVC NBAR Export Capability—For detailed information, see the following Cisco document:[https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos\\_nbar/configuration/xs-16-6/qos-nbar-xe-16-6-book.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos_nbar/configuration/xs-16-6/qos-nbar-xe-16-6-book.html).
- Software Maintenance Upgrade—For detailed information, see the following Cisco document:  
<https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/config-mgmt/configuration/xs-16-6/config-mgmt-xe-16-6-book.html>.
- Support for Idle URL for SIP Phones on Unified CME—For detailed information, see the following Cisco document:[http://www.cisco.com/c/en/us/td/docs/voice\\_ip\\_comm/cucme/admin/configuration/manual/cmeadm/cmelabel.html](http://www.cisco.com/c/en/us/td/docs/voice_ip_comm/cucme/admin/configuration/manual/cmeadm/cmelabel.html).
- Umbrella Connector on Cisco 4000 Series ISR/Interoperability of OpenDNS with IWAN—For detailed information, see the following Cisco document:  
[http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/sec\\_data\\_utd/configuration/xs-16-6/sec-data-umbrella-branch-xe-16-6-book/sec-data-umbrella-branch.html](http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/sec_data_utd/configuration/xs-16-6/sec-data-umbrella-branch-xe-16-6-book/sec-data-umbrella-branch.html)
- UDF-ACL-Enhancement—For detailed information, see the following Cisco document:<http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/lanswitch/configuration/xs-16-6/lanswitch-xe-16-6-book/lansw-conf-erspan.html>.
- Web User Interface—Supports an embedded GUI-based device-management tool that provides the ability to provision the router, simplifies device deployment and manageability, and enhances user experience. The following features are supported on Web User Interface from Cisco IOS XE Everest 16.6.1:
  - Cisco Umbrella Branch—The Cisco Umbrella Branch feature enables cloud-based security service by inspecting the Domain Name System (DNS) query that is sent to the enterprise DNS server through the Cisco 4000 Series Integrated Services Routers (ISR). The security administrator configures policies on the Cisco Umbrella Branch cloud to either allow or deny traffic towards the fully qualified domain name (FQDN). Cisco 4000 Series ISR acts as a DNS forwarder on the network edge, transparently intercepts DNS traffic, and forwards the DNS queries to the Cisco Umbrella Branch cloud.
  - Dynamic Multipoint VPN—The Dynamic Multipoint VPN feature allows users to better scale large and small IP Security (IPsec) Virtual Private Networks (VPNs) by combining generic routing encapsulation (GRE) tunnels, IPsec encryption, and Next Hop Resolution Protocol (NHRP).
  - USB-LTE modem is supported on Web UI.
  - Snort IPS/IDS—The Snort IPS feature enables Intrusion Prevention System (IPS) or Intrusion Detection System (IDS) for branch offices on Cisco 4000 Series Integrated Services Routers and Cisco Cloud Services Router 1000v Series. This feature uses the open source Snort solution to enable IPS and IDS.
  - Zone-Based Firewall—Allows you to easily manage Cisco IOS unidirectional firewall policy between groups of interfaces known as zones.  
  
For information on how to access the Web User Interface, see Configure the Router for Web User Interface section.
  - YANG Data Models—For the list of Cisco IOS XE YANG models available with this release, navigate to <https://github.com/YangModels/yang/tree/master/vendor/cisco/xe/1661>.  
  
Revision statements embedded in the YANG files indicate if there has been a model revision. The README.md file in the same github location highlights changes that have been made in the release

- Zero-Touch Provisioning (ZTP) —Supports HTTP file download along with TFTP file download

## Configure the Router for Web User Interface

This section explains how to configure the router to access Web User Interface. Web User Interface require the following basic configuration to connect to the router and manage it.

- An HTTP or HTTPs server must be enabled with local authentication.
- A local user account with privilege level 15 and accompanying password must be configured.
- Vty line with protocol ssh/telnet must be enabled with local authentication. This is needed for interactive commands.
- For more information on how to configure the router for Web User Interface, see [Cisco 4000 Series ISRs Software Configuration Guide, Cisco IOS XE 17](#).

### Entering the Configuration Commands Manually

To enter the Cisco IOS commands manually, complete the following steps:

#### Before you begin

If you do not want to use the factory default configuration because the router already has a configuration, or for any other reason, you can use the procedure in this section to add each required command to the configuration.

#### Procedure

- 
- Step 1** Log on to the router through the Console port or through an Ethernet port.
- Step 2** If you use the Console port, and no running configuration is present in the router, the Setup command Facility starts automatically, and displays the following text:
- ```
--- System Configuration Dialog ---

Continue with configuration dialog? [yes/no]:
```
- Enter no so that you can enter Cisco IOS CLI commands directly.
- If the Setup Command Facility does not start automatically, a running configuration is present, and you should go to the next step.
- Step 3** When the router displays the user EXEC mode prompt, enter the **enable** command, and the enable password, if one is configured, as shown in the following example:
- ```
Router> enable
password password
```
- Step 4** Enter config mode by entering the **configure terminal** command, as shown in the following example.
- ```
Router> config terminal
Router(config)#
```
- Step 5** Using the command syntax shown, create a user account with privilege level 15.

- Step 6** If no router interface is configured with an IP address, configure one so that you can access the router over the network. The following example shows the interface GigabitEthernet 0/0/0 configured.
- ```
Router(config)# interface gigabitethernet 0/0/0
Router(config-if)# ip address 10.10.10.1 255.255.255.248
Router(config-if)# no shutdown
Router(config-if)# exit
```
- Step 7** Configure the router as an http server for nonsecure communication, or as an https server for secure communication. To configure the router as an http server, enter the **ip http server** command shown in the example:
- ```
Router(config)# ip http secure-server
```
- Step 8** Configure the router for local authentication, by entering the ip http authentication local command, as shown in the example:
- ```
Router(config)# ip http authentication local
```
- Step 9** Configure the vty lines for privilege level 15. For nonsecure access, enter the transport input telnet command. For secure access, enter the transport input telnet ssh command. An example of these commands follows:
- ```
Router(config)# line vty 0 4
Router(config-line)# privilege level 15
Router(config-line)# login local
Router(config-line)# transport input telnet
Router(config-line)# transport output telnet
Router(config-line)# transport input telnet ssh
Router(config-line)# transport output telnet ssh
Router(config-line)# exit
Router(config)# line vty 5 15
Router(config-line)# privilege level 15
Router(config-line)# login local
Router(config-line)# transport input telnet
Router(config-line)# transport output telnet
Router(config-line)# transport input telnet ssh
Router(config-line)# transport output telnet ssh
Router(config-line)# end
```

## Resolved and Open Bugs

This section provides information about the caveats in Cisco 4000 Series Integrated Services Routers and describe unexpected behavior. Severity 1 caveats are the most serious caveats. Severity 2 caveats are less serious. Severity 3 caveats are moderate caveats. This section includes severity 1, severity 2, and selected severity 3 caveats.

The open and resolved bugs for this release are accessible through the [Cisco Bug Search Tool](#). This web-based tool provides you with access to the Cisco bug tracking system, which maintains information about bugs and vulnerabilities in this product and other Cisco hardware and software products. Within the [Cisco Bug Search Tool](#), each bug is given a unique identifier (ID) with a pattern of CSCxxNNNNN, where x is any letter (a-z) and N is any number (0-9). The bug IDs are frequently referenced in Cisco documentation, such as Security Advisories, Field Notices and other Cisco support documents. Technical Assistance Center (TAC) engineers or other Cisco staff can also provide you with the ID for a specific bug. The [Cisco Bug Search Tool](#) enables you to filter the bugs so that you only see those in which you are interested.

In addition to being able to search for a specific bug ID, or for all bugs in a product and release, you can filter the open and/or resolved bugs by one or more of the following criteria:

- Last modified date
- Status, such as fixed (resolved) or open
- Severity
- Support cases

You can save searches that you perform frequently. You can also bookmark the URL for a search and email the URL for those search results.

---

**Note** If the defect that you have requested cannot be displayed, this may be due to one or more of the following reasons: the defect number does not exist, the defect does not have a customer-visible description yet, or the defect has been marked Cisco Confidential.

---

We recommend that you view the field notices for the current release to determine whether your software or hardware platforms are affected. You can access the field notices from the following location:

[http://www.cisco.com/en/US/support/tsd\\_products\\_field\\_notice\\_summary.html](http://www.cisco.com/en/US/support/tsd_products_field_notice_summary.html)

## Using the Cisco Bug Search Tool

For more information about how to use the [Cisco Bug Search Tool](#), including how to set email alerts for bugs and to save bugs and searches, see [Bug Search Tool Help & FAQ](#).

### Before You Begin

---

**Note** You must have a Cisco.com account to log in and access the [Cisco Bug Search Tool](#). If you do not have one, you can register for an account.

---

### Procedure

- 
- Step 1** In your browser, navigate to the [Cisco Bug Search Tool](#).
- Step 2** If you are redirected to a Log In page, enter your registered Cisco.com username and password and then, click Log In.
- Step 3** To search for a specific bug, enter the bug ID in the Search For field and press Enter.
- Step 4** To search for bugs related to a specific software release, do the following:
- In the Product field, choose Series/Model from the drop-down list and then enter the product name in the text field. If you begin to type the product name, the [Cisco Bug Search Tool](#) provides you with a drop-down list of the top ten matches. If you do not see this product listed, continue typing to narrow the search results.
  - In the Releases field, enter the release for which you want to see bugs.
- The [Cisco Bug Search Tool](#) displays a preview of the results of your search below your search criteria.
- Step 5** To see more content about a specific bug, you can do the following:
- Mouse over a bug in the preview to display a pop-up with more information about that bug.

- Click on the hyperlinked bug headline to open a page with the detailed bug information.

**Step 6** To restrict the results of a search, choose from one or more of the following filters:

| Filter        | Description                                                                                                                                  |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Modified Date | A predefined date range, such as last week or last six months.                                                                               |
| Status        | A specific type of bug, such as open or fixed.                                                                                               |
| Severity      | The bug severity level as defined by Cisco. For definitions of the bug severity levels, see <a href="#">Bug Search Tool Help &amp; FAQ</a> . |
| Rating        | The rating assigned to the bug by users of the <a href="#">Cisco Bug Search Tool</a> .                                                       |
| Support Cases | Whether a support case has been opened or not.                                                                                               |

## Resolved Caveats - Cisco IOS XE Everest 16.6.4

All resolved bugs for this release are available in the [Cisco Bug Search Tool](#).

| Caveat ID Number           | Description                                                                                          |
|----------------------------|------------------------------------------------------------------------------------------------------|
| <a href="#">CSCsd58148</a> | %SEC_LOGIN-4-LOGIN_FAILED does not show username in [user: ].                                        |
| <a href="#">CSCuv14856</a> | WATCHDOG timeout crash during IPSEC phase 2.                                                         |
| <a href="#">CSCuv90519</a> | Map does not get updated with socket change on local address change.                                 |
| <a href="#">CSCuw90084</a> | DS: Download should print alerts in case of unresolved variables.                                    |
| <a href="#">CSCvb34443</a> | The ikev2 fragmentation not working with aes-gcm encryption - hmac failure.                          |
| <a href="#">CSCvb69966</a> | Memory leak under LLDP Protocol process.                                                             |
| <a href="#">CSCvb88867</a> | Excess BGP Traps Generated just after upgrade.                                                       |
| <a href="#">CSCvd14310</a> | IP TUNNELS: Overlapping Loopback Interface Causes Incorrect Forwarding Decision with AppNav and PfR. |
| <a href="#">CSCvd47657</a> | Cisco 4000 Series ISRs routers may crashed with Segmentation Fault in AFW Application Process.       |
| <a href="#">CSCvd50613</a> | Cisco 4431 ISR crashes with UNIX-EXT-SIGNAL: Segmentation fault(11), Process = HTTP CP.              |
| <a href="#">CSCvd90410</a> | Router loses RSA keys upon boot with private-config encryption and config archive enabled.           |
| <a href="#">CSCve11959</a> | Memory leak occurs on DHCP client.                                                                   |
| <a href="#">CSCve41775</a> | Crash over CCSIP_SPI_CONTROL process due to null pointer / segmentation fault.                       |
| <a href="#">CSCve55004</a> | OSPF GIR BASE: not all repair paths calculated for AS ext routes when routes rxd with maxmetric.     |
| <a href="#">CSCve61143</a> | CME SIP sip-ua do not send registration request when vrf forwarding is enabled.                      |
| <a href="#">CSCvf05864</a> | BGP RR changes tunnel parameters for bgp evpn route type 3.                                          |
| <a href="#">CSCvf06123</a> | Route-map not checked when packet is flowing from OUT to IN with Static NAT.                         |
| <a href="#">CSCvf07153</a> | SIP Date header format not in GMT Format.                                                            |
| <a href="#">CSCvf07576</a> | Router reloaded when doing show BGP RT filter routes.                                                |

| Caveat ID Number           | Description                                                                                    |
|----------------------------|------------------------------------------------------------------------------------------------|
| <a href="#">CSCvf16374</a> | CME SNR Does not get ringback for PRI calls.                                                   |
| <a href="#">CSCvf19460</a> | CTS Pac download fails with ISE reachability through loopback interface over vrf.              |
| <a href="#">CSCvf23485</a> | DS: Increase the size of command and prompt strings.                                           |
| <a href="#">CSCvf26916</a> | RTCP/RTP based Media Inactivity timers for MGCP GW do not work in newer releases.              |
| <a href="#">CSCvf38050</a> | Voice Gateway crash due to memory corruption while finding DN index during redirect.           |
| <a href="#">CSCvf49126</a> | Stub is not leaking the network as expected.                                                   |
| <a href="#">CSCvf51773</a> | NHRP redirect overriding routing table.                                                        |
| <a href="#">CSCvf52766</a> | Dual Ringback in Semi-consult transfer on CME.                                                 |
| <a href="#">CSCvf53053</a> | Crash when issuing no dspfarm profile x stuck on DOWN_PENDING state.                           |
| <a href="#">CSCvf57090</a> | CUBE automatically considers re-INVITE with a=silenceSupp:off - - - as fax call.               |
| <a href="#">CSCvf66030</a> | OSPF SR: When SRGB range is changed, mapping server entries do not get re-installed.           |
| <a href="#">CSCvf66860</a> | IOS crash in SOCK TCP Test Server process.                                                     |
| <a href="#">CSCvf70383</a> | Crash in SDP Passthru when T.38 as 1st mline in mid-call SDP.                                  |
| <a href="#">CSCvf73693</a> | Cisco 4321 ISR crash @ BGP Router for bfd bgp when sending traffic.                            |
| <a href="#">CSCvf80363</a> | Rotate nginx access/error log files.                                                           |
| <a href="#">CSCvf81931</a> | Loopback interface not appearing in RIB after upgrade.                                         |
| <a href="#">CSCvf84528</a> | False "voip_rtp_allocate_port:Possible port leak" errors.                                      |
| <a href="#">CSCvf88705</a> | Malformed GETVPN message %GDOI-4-COOP_KS_UNAUTH.                                               |
| <a href="#">CSCvf89894</a> | GETVPN // Primary KS sending rekey first to GM's and then to Secondary KS via scheduled rekey. |
| <a href="#">CSCvf96009</a> | OSPF SR: When loopback isconfigured with prefix suppression, EPL should be withdrawn.          |
| <a href="#">CSCvf96294</a> | MIB counter for IPsec tunnels does not decrement under high tunnel scale and churn.            |
| <a href="#">CSCvf97908</a> | When NSSA ASBR is reloaded, ECMP to ext routes not installed in other routers.                 |
| <a href="#">CSCvf98378</a> | IOSXE_INFRA-6-PROCPATH_CLIENT_HOG: IOS shim client fman stats bipc has taken xx msec.          |
| <a href="#">CSCvg01774</a> | OSPF SSPF: when seg area is disabled and enabled, mapping server EPL entries not re-generated. |
| <a href="#">CSCvg03444</a> | Hub MC continues to send EIGRP SAF hellos after adjacency removed.                             |

| Caveat ID Number           | Description                                                                                            |
|----------------------------|--------------------------------------------------------------------------------------------------------|
| <a href="#">CSCvg05172</a> | Crash in VOIP media loop detection.                                                                    |
| <a href="#">CSCvg05452</a> | IOS-XE router crash from memory corruption during CCB cleanup.                                         |
| <a href="#">CSCvg06142</a> | IPSM Tunnel Entry and Crypto IKMP memory leak due to IKE tunnel entry not deleted.                     |
| <a href="#">CSCvg08471</a> | OSPF; process ospf segmentation fault when shut and no shut is performed in active RP.                 |
| <a href="#">CSCvg08768</a> | OSPF BGP LS: After fail over, error msg seen: %LSLIB-4-EOD: Producer OSPF-0x0 did not send EOD.        |
| <a href="#">CSCvg12605</a> | Corrupted NOTIFY leads to %CRYPTO-4-IKMP_BAD_MESSAGE, stale ISAKMP SA and traffic failure.             |
| <a href="#">CSCvg16234</a> | ISR receives a control packet (CDP) with a CMD tag it should process it, not drop it                   |

## Related Documentation

### Platform-Specific Documentation

For information about the Cisco 4000 Series ISRs and associated services and modules, see:

[Documentation Roadmap for the Cisco 4000 Series ISRs,Cisco IOS XE 16.x](#) .

### Cisco IOS Software Documentation

The Cisco IOS XE Everest 16.x software documentation set consists of Cisco IOS XE Everest 16.x configuration guides and Cisco IOS command references. The configuration guides are consolidated platform-independent configuration guides organized and presented by technology. There is one set of configuration guides and command references for the Cisco IOS XE Everest 16.x release train. These Cisco IOS command references support all Cisco platforms that are running any Cisco IOS XE Everest 16.x software image.

See [http://www.cisco.com/en/US/products/ps11174/tsd\\_products\\_support\\_series\\_home.html](http://www.cisco.com/en/US/products/ps11174/tsd_products_support_series_home.html)

Information in the configuration guides often includes related content that is shared across software releases and platforms.

Additionally, you can use Cisco Feature Navigator to find information about feature, platform, and software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn> . An account on cisco.com is not required.

### Communications, Services, and Additional Information

- To receive timely, relevant information from Cisco, sign up at [Cisco Profile Manager](#).
- To get the business impact you're looking for with the technologies that matter, visit [Cisco Services](#).
- To submit a service request, visit [Cisco Support](#).
- To discover and browse secure, validated enterprise-class apps, products, solutions and services, visit [Cisco Marketplace](#).
- To obtain general networking, training, and certification titles, visit [Cisco Press](#).
- To find warranty information for a specific product or product family, access [Cisco Warranty Finder](#).

### Cisco Bug Search Tool

[Cisco Bug Search Tool](#) (BST) is a web-based tool that acts as a gateway to the Cisco bug tracking system that maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. BST provides you with detailed defect information about your products and software.
