Release Notes for Cisco Catalyst 9600 Series Switches, Cisco IOS XE Bengaluru 17.6.x

First Published: 2021-08-02

Last Modified: 2024-04-06

Release Notes for Cisco Catalyst 9600 Series Switches, Cisco IOS XE Bengaluru 17.6.x

Introduction

Cisco Catalyst 9600 Series Switches are the next generation purpose-built 40 GigabitEthernet, 50 GigabitEthernet, 100 GigabitEthernet, and 400 GigabitEthernet modular core and aggregation platform providing resiliency at scale with the industry's most comprehensive security while allowing your business to grow at the lowest total operational cost. They have been purpose-built to address emerging trends of Security, IoT, Mobility, and Cloud.

They deliver hardware and software convergence in terms of ASIC architecture with Unified Access Data Plane (UADP) 3.0 and Cisco Silicon One Q200. The platform runs an Open Cisco IOS XE that supports model driven programmability, Serial Advanced Technology Attachment (SATA) Solid State Drive (SSD) local storage, and a higher memory footprint). The series forms the foundational building block for SD-Access, which is Cisco's lead enterprise architecture.

It also supports features that provide high availability, advanced routing and infrastructure services, security capabilities, and application visibility and control.

Whats New In Cisco IOS XE Bengaluru 17.6.8

Hardware Features in Cisco IOS XE Bengaluru 17.6.8

There are no new hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.8

There are no new software features in this release.

Whats New in Cisco IOS XE Bengaluru 17.6.7

Hardware Features in Cisco IOS XE Bengaluru 17.6.7

There are no new hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.7

There are no new software features in this release.

Whats New in Cisco IOS XE Bengaluru 17.6.6a

There are no new features in this release. This release provides a fix for CSCwh87343: Cisco IOS XE Software Web UI Privilege Escalation Vulnerability. For more information, see Security Advisory: cisco-sa-iosxe-webui-privesc-j22SaA4z.

Whats New in Cisco IOS XE Bengaluru 17.6.6

Hardware Features in Cisco IOS XE Bengaluru 17.6.6

There are no new hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.6

There are no new software features in this release.

Whats New in Cisco IOS XE Bengaluru 17.6.5

Hardware Features in Cisco IOS XE Bengaluru 17.6.5

There are no new hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.5

There are no new software features in this release.

Whats New in Cisco IOS XE Bengaluru 17.6.4

Hardware Features in Cisco IOS XE Bengaluru 17.6.4

There are no hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.4

There are no new software features in this release.

Whats New in Cisco IOS XE Bengaluru 17.6.3

Hardware Features in Cisco IOS XE Bengaluru 17.6.3

There are no new hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.3

There are no new software features in this release.

Whats New in Cisco IOS XE Bengaluru 17.6.2

Hardware Features in Cisco IOS XE Bengaluru 17.6.2

There are no new hardware features in this release.

Software Features in Cisco IOS XE Bengaluru 17.6.2

| Feature Name | Description and License Level Information |
|-----------------------------|--|
| Data MDT Support for L3 TRM | Introduces support for data multicast distribution tree (MDT) for Layer 3 Tenant Routed Multicast (TRM). Data MDTs are purpose built underlay MDTs to provide optimized forwarding in the MVPN and EVPN core. See BGP EVPN VXLAN → Configuring Tenant Routed Multicast. |
| | (Network Advantage) |

Whats New in Cisco IOS XE Bengaluru 17.6.1

Hardware Features in Cisco IOS XE Bengaluru 17.6.1

| Feature Name | Description and Documentation Link | |
|-----------------------|---|--|
| 10GBASE-CU SFP+ Cable | Supported cable product numbers: SFP-H10GB-CU4M | |
| | For information about these cables, see Cisco 10GBASE SFP+ Modules Data Sheet. For information about device compatibility, see the Transceiver Module Group (TMG) Compatibility Matrix. | |

Software Features in Cisco IOS XE Bengaluru 17.6.1

| Feature Name | Description and License Level Information | | | |
|---|---|--|--|--|
| IPv6 Explicit Null Label | Allows you to use IPv6 Explicit Null Label as a VPN label to exchange IPv6 reachability information over the MPLS core. The label has a value of 2. | | | |
| | (Network Advantage) | | | |
| MLD Snooping over VPLS | Introduces support for Multicast Listener Discovery (MLD) Snooping over Virtual Private LAN Services (VPLS). This feature allows traffic to be forwarded over pseudowires that receive Internet Group Management Protocol (IGMP) or MLD reports from remote provider edge (PE) devices. | | | |
| | (Network Advantage) | | | |
| MPLS Traffic Engineering • IP Explicit Address | Multiprotocol Label Switching (MPLS) Traffic Engineering (TE) provides an integrated approach to traffic engineering by incorporating capabilities of Layer 2 into Layer 3. | | | |
| • LSP Attributes | • IP Explicit Address Exclusion: Provides a means to exclude a link or node from the path for MPLS TE label switched path (LSP). | | | |
| Bundled Interface | • LSP Attributes: Provides an LSP Attribute List feature and a Path Option for Bandwidth Override feature. | | | |
| Configurable Path Calculation Metric for | • Bundled Interface: Enables MPLS Traffic Engineering tunnels over the bundled interfaces, EtherChannel and Gigabit EtherChannel. | | | |
| Tunnels | • Configurable Path Calculation Metric for Tunnels: Enables the user to control the metric used in path calculation for traffic engineering tunnels on a per-tunnel basis. | | | |
| | (Network Advantage) | | | |
| Programmability | The following programmability features are introduced in this release: | | | |
| NETCONF Access from Guest Shell | • NETCONF Access from Guest Shell: Introduces support for accessing NETCONF from within the Guest Shell, to run Python scripts and invoke Cisco-custom package CLIs using the NETCONF protocol. | | | |
| YANG Data Models | (DNA Essentials and DNA Advantage) | | | |
| | • YANG Data Models: For the list of Cisco IOS XE YANG models available with this release, navigate to: https://github.com/YangModels/yang/tree/master/vendor/cisco/xe/1761. | | | |
| | Revision statements embedded in the YANG files indicate if there has been a model revision. The README.md file in the same GitHub location highlights changes that have been made in the release. | | | |
| RadSec CoA over same tunnel | Introduces support for RadSec Change of Authorization (CoA) request reception and CoA response transmission over the same authentication channel. | | | |
| | (Network Essentials and Network Advantage) | | | |

| Feature Name | Description and License Level Information | | |
|--|--|--|--|
| SCP improvement in large RTT scenario | T Introduces support for secure copy (SCP) in large round trip time (RTT) settings by using the window-size variable option of the ip ssh bulk-mode command. | | |
| | (Network Essentials and Network Advantage) | | |
| Static NAT precedence over Dynamic NAT rule | Allows static NAT rule to precede over dynamic NAT rule when a given address is eligible for translation by both the rules. | | |
| | (Network Advantage) | | |
| WCCP - VRF support | Introduces support for virtual routing and forwarding (VRF) with Web Cache Communication Protocol (WCCP). (Network Advantage) | | |
| SSO Support for VRRPv3 | Introduces support for Stateful Switchover (SSO) with Virtual Router Redundancy Protocol version 3 (VRRPv3). Use the fhrp sso command to enable this feature. | | |
| | (Network Essentials and Network Advantage) | | |

| New on the WebUI | | |
|--|--|--|
| BFD Echo Mode for OSPFv3Provides a mechanism to detect failures in the network between two adjacent switches, inc the interfaces, data links, and forwarding planes. This feature can be configured globally, o interface. | | |
| SDM Templates | Introduces device specific custom SDM templates that help to optimise the use of physical resources on the device. | |

| Serviceability | | | |
|--|--|--|--|
| show consistency-checker | The command was modified. The following keywords were introduced: | | |
| | • mcast: Runs the consistency-checker on the multicast forwarding tables | | |
| | • objects: Runs the consistency-checker on objects | | |
| | • run-id: Runs the consistency-checker by run ID | | |
| show platform nat translations | The command was introduced. It records and displays all NAT sessions for monitoring and troubleshooting. | | |
| show platform nat translations statistics | s The command was introduced. It displays current NAT statistics, including the NAT active sessions. | | |
| match device-type regex regular-expression | The command was modified. regex keyword was introduced. It allows you to define a regular expression for the device type. | | |
| protocol tlv-type number value {string integer { regex regular-expression}} | The command was modified. regex keyword was introduced. It allows you to define a regular expression for the Type-Length-Value (TLV). | | |

Important Notes

- Unsupported Features, on page 6
- Complete List of Supported Features, on page 6
- Accessing Hidden Commands, on page 6
- Default Behaviour, on page 7

Unsupported Features

- Cisco Application Visibility and Control (AVC)
- IPsec VPN
- Network-Based Application Recognition (NBAR) and Next Generation NBAR (NBAR2)

Complete List of Supported Features

For the complete list of features supported on a platform, see the Cisco Feature Navigator at https://cfnng.cisco.com.

Accessing Hidden Commands

This section provides information about hidden commands in Cisco IOS XE and the security measures that are in place, when they are accessed. These commands are only meant to assist Cisco TAC in advanced troubleshooting and are not documented.

Hidden commands are available under:

- Category 1—Hidden commands in privileged or User EXEC mode. Begin by entering the service internal command to access these commands.
- Category 2—Hidden commands in one of the configuration modes (global, interface and so on). These commands do not require the **service internal** command.

Further, the following applies to hidden commands under Category 1 and 2:

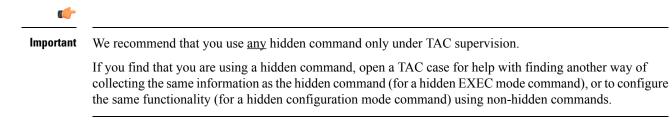

• The commands have CLI help. Enter enter a question mark (?) at the system prompt to display the list of available commands.

Note: For Category 1, enter the **service internal** command before you enter the question mark; you do not have to do this for Category 2.

• The system generates a %PARSER-5-HIDDEN syslog message when a hidden command is used. For example:

*Feb 14 10:44:37.917: %PARSER-5-HIDDEN: Warning!!! 'show processes memory old-header ' is a hidden command. Use of this command is not recommended/supported and will be removed in future.

Apart from category 1 and 2, there remain internal commands displayed on the CLI, for which the system does NOT generate the %PARSER-5-HIDDEN syslog message.

Default Behaviour

Beginning from Cisco IOS XE Gibraltar 16.12.5 and later, do not fragment bit (DF bit) in the IP packet is always set to 0 for all outgoing RADIUS packets (packets that originate from the device towards the RADIUS server).

Supported Hardware

Cisco Catalyst 9600 Series Switches—Model Numbers

The following table lists the supported switch models. For information about the available license levels, see section *License Levels*.

| Switch Model | Description | |
|------------------------------|--|--|
| (append with "=" for spares) | | |
| C9606R | Cisco Catalyst 9606R Switch | |
| | Redundant supervisor module capability | |
| | • Four linecard slots | |
| | • Hot-swappable fan tray, front and rear serviceable, fan tray assembly with 9 fans. | |
| | • Four power supply module slots | |

Supported Hardware on Cisco Catalyst 9600 Series Switches

| Product ID | Description | |
|---|--|--|
| (append with "=" for spares) | | |
| Supervisor Modules | | |
| C9600-SUP-1 Cisco Catalyst 9600 Series Supervisor 1 Module | | |
| | This supervisor module is supported on the C9606R chassis. | |
| SATA ¹ SSD ² Modules (for the Supervisor) | | |
| C9K-F2-SSD-240GB | Cisco Catalyst 9600 Series 240GB SSD Storage | |
| C9K-F2-SSD-480GB | Cisco Catalyst 9600 Series 480GB SSD Storage | |

| Product ID | Description Cisco Catalyst 9600 Series 960GB SSD Storage | | |
|------------------------------|--|--|--|
| (append with "=" for spares) | | | |
| C9K-F2-SSD-960GB | | | |
| Line Cards | | | |
| C9600-LC-48YL | Cisco Catalyst 9600 Series 48-Port SFP56 line card. | | |
| | • C9600X-SUP-2 | | |
| | • 48 SFP56 ports of 50G/25G/10G | | |
| | • C9600X-SUP-1 | | |
| | • 48 SFP28 ports of 25G/10G/1G | | |
| C9600-LC-24C | Cisco Catalyst 9600 Series 24-Port 40G/12-Port 100G line card. | | |
| | • C9600X-SUP-2 | | |
| | • 24 QSFP28 ports of 100G/40G | | |
| | • C9600-SUP-1 | | |
| | • 12 ports of 100G or 24 ports of 40G | | |
| C9600-LC-48TX | Cisco Catalyst 9600 Series 48-Port MultiGigabit RJ45 line card. | | |
| | • C9600X-SUP-2 | | |
| | • 48 ports of 10G/5G/2.5G | | |
| | • C9600X-SUP-1 | | |
| | • 48 ports of 10G/5G/2.5G/1G and 100M/10M | | |
| C9600-LC-48S | Cisco Catalyst 9600 Series 48-Port SFP line card. | | |
| | • C9600X-SUP-2 | | |
| | • Not supported | | |
| | • C9600-SUP-1 | | |
| | • 48 SFP ports of 1G | | |
| AC Power Supply Modules | | | |
| C9600-PWR-2KWAC | Cisco Catalyst 9600 Series 2000W AC Power Supply Module ³ | | |
| DC Power Supply Modules | | | |
| C9600-PWR-2KWDC | Cisco Catalyst 9600 Series 2000W DC Power Supply Module | | |

- ¹ Serial Advanced Technology Attachment (SATA)
 ² Solid State Drive (SSD) Module
- ³ Power supply output capacity is 1050W at 110 VAC.

Optics Modules

Cisco Catalyst Series Switches support a wide range of optics and the list of supported optics is updated on a regular basis. Use the Transceiver Module Group (TMG) Compatibility Matrix tool, or consult the tables at this URL for the latest transceiver module compatibility information: https://www.cisco.com/en/US/products/ hw/modules/ps5455/products_device_support_tables_list.html

Compatibility Matrix

The following table provides software compatibility information between Cisco Catalyst 9600 Series Switches, Cisco Identity Services Engine, Cisco Access Control Server, and Cisco Prime Infrastructure.

| Catalyst 9600 | Cisco Identity Services Engine | Cisco Access Control Server | Cisco Prime Infrastructure |
|-------------------|---|--------------------------------|---|

Web UI System Requirements

The following subsections list the hardware and software required to access the Web UI:

Minimum Hardware Requirements

| Processor Speed | DRAM | Number of Colors | Resolution | Font Size |
|---------------------------------|---------------------|------------------|-------------------------|-----------|
| 233 MHz minimum ⁴ | 512 MB ⁵ | 256 | 1280 x 800 or higher | Small |

⁴ We recommend 1 GHz

⁵ We recommend 1 GB DRAM

Software Requirements

Operating Systems

- · Windows 10 or later
- Mac OS X 10.9.5 or later

Browsers

- Google Chrome—Version 59 or later (On Windows and Mac)
- · Microsoft Edge
- Mozilla Firefox—Version 54 or later (On Windows and Mac)
- Safari—Version 10 or later (On Mac)

ROMMON Versions

ROMMON, also known as the boot loader, is firmware that runs when the device is powered up or reset. It initializes the processor hardware and boots the operating system software (Cisco IOS XE software image). The ROMMON is stored on the following Serial Peripheral Interface (SPI) flash devices on your switch:

- Primary: The ROMMON stored here is the one the system boots every time the device is powered-on
 or reset.
- Golden: The ROMMON stored here is a backup copy. If the one in the primary is corrupted, the system
 automatically boots the ROMMON in the golden SPI flash device.

ROMMON upgrades may be required to resolve firmware defects, or to support new features, but there may not be new versions with every release.

The following table provides ROMMON version information for the Cisco Catalyst 9600 Series Supervisor Modules. For ROMMON version information of Cisco IOS XE 16.x.x releases, refer to the corresponding Cisco IOS XE 16.x.x release notes of the respective platform.

| Release | ROMMON Version (C9600-SUP-1) | ROMMON Version (C9600X-SUP-2) |
|-------------------|------------------------------|-------------------------------|

Upgrading the Switch Software

This section covers the various aspects of upgrading or downgrading the device software.

```
Note
```

You cannot use the Web UI to install, upgrade, or downgrade device software.

Finding the Software Version

The package files for the Cisco IOS XE software are stored on the system board flash device (flash:).

You can use the **show version** privileged EXEC command to see the software version that is running on your switch.

Note Although the **show version** output always shows the software image running on the switch, the model name shown at the end of this display is the factory configuration and does not change if you upgrade the software license.

You can also use the **dir** *filesystem:* privileged EXEC command to see the directory names of other software images that you might have stored in flash memory.

Software Images

| Release | Image Type | File Name |
|--------------------------------|-----------------------------|-------------------------------|
| Cisco IOS XE Bengaluru 17.6.8 | CAT9K_IOSXE | cat9k_lite_iosxe.17.06.08.SPA |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.08.SPA |
| Cisco IOS XE Bengaluru 17.6.7 | CAT9K_IOSXE | cat9k_iosxe.17.06.07.SPA.bin |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.07.SPA |
| Cisco IOS XE Bengaluru 17.6.6a | CAT9K_IOSXE | cat9k_iosxe.17.06.06a.SPA.bin |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.06a.SP |
| Cisco IOS XE Bengaluru 17.6.6 | CAT9K_IOSXE | cat9k_iosxe.17.06.06.SPA.bin |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.06.SPA |
| Cisco IOS XE Bengaluru 17.6.5 | CAT9K_IOSXE | cat9k_iosxe.17.06.05.SPA.bin |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.05.SPA |
| Cisco IOS XE Bengaluru 17.6.4 | CAT9K_IOSXE | cat9k_iosxe.17.06.04.SPA.bin |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.04.SPA |

| Release | Image Type | File Name |
|-------------------------------|-----------------------------|--------------------------|
| Cisco IOS XE Bengaluru 17.6.3 | CAT9K_IOSXE | cat9k_iosxe.17.06.03.SPA |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.03 |
| Cisco IOS XE Bengaluru 17.6.2 | CAT9K_IOSXE | cat9k_iosxe.17.06.02.SPA |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.02 |
| Cisco IOS XE Bengaluru 17.6.1 | CAT9K_IOSXE | cat9k_iosxe.17.06.01.SPA |
| | No Payload Encryption (NPE) | cat9k_iosxe_npe.17.06.01 |

Upgrading the ROMMON

To know the ROMMON or bootloader version that applies to every major and maintenance release, see ROMMON Versions, on page 14.

You can upgrade the ROMMON before, or, after upgrading the software version. If a new ROMMON version is available for the software version you are upgrading to, proceed as follows:

· Upgrading the ROMMON in the primary SPI flash device

This ROMMON is upgraded automatically. When you upgrade from an existing release on your switch to a later or newer release for the first time, and there is a new ROMMON version in the new release, the system automatically upgrades the ROMMON in the primary SPI flash device, based on the hardware version of the switch.

• Upgrading the ROMMON in the golden SPI flash device

You must manually upgrade this ROMMON. Enter the **upgrade rom-monitor capsule golden switch** command in privileged EXEC mode.

Note

- In case of a Cisco StackWise Virtual setup, upgrade the active and standby supervisor modules.
 - In case of a High Availability set up, upgrade the active and standby supervisor modules.

After the ROMMON is upgraded, it will take effect on the next reload. If you go back to an older release after this, the ROMMON is not downgraded. The updated ROMMON supports all previous releases.

Software Installation Commands

Summary of Software Installation Commands To install and activate the specified file, and to commit changes to be persistent across reloads: install add file filename [activate commit] To separately install, activate, commit, cancel, or remove the installation file: install ?

| Summary of Software Installatio | n Commands |
|---------------------------------|--|
| add file tftp: filename | Copies the install file package from a remote location to the device and performs a compatibility check for the platform and image versions. |
| activate [auto-abort-timer] | Activates the file, and reloads the device. The auto-abort-timer keyword automatically rolls back image activation. |
| commit | Makes changes persistent over reloads. |
| rollback to committed | Rolls back the update to the last committed version. |
| abort | Cancels file activation, and rolls back to the version that was running before the current installation procedure started. |
| remove | Deletes all unused and inactive software installation files. |

Upgrading in Install Mode

Follow these instructions to upgrade from one release to another, using **install** commands, in install mode. To perform a software image upgrade, you must be booted into IOS through **boot flash:packages.conf**.

Before you begin

Â

Caution

You must comply with these cautionary guidelines during an upgrade:

- Do not power cycle the switch.
- Do not disconnect power or remove the supervisor module.
- Do not perform an online insertion and replacement (OIR) of either supervisor (in a High Availability setup), if one of the supervisor modules in the chassis is in the process of a bootloader upgrade or when the switch is booting up.
- Do not perform an OIR of a switching module (linecard) when the switch is booting up.

Note that you can use this procedure for the following upgrade scenarios:

| When upgrading from | То | |
|---|-------------------------------|--|
| Cisco IOS XE Bengaluru 17.5.x or earlier releases | Cisco IOS XE Bengaluru 17.6.x | |

The sample output in this section displays upgrade from Cisco IOS XE Bengaluru 17.5.1 to Cisco IOS XE Bengaluru 17.6.1 using **install** commands.

Procedure

Step 1 Clean-up

install remove inactive

Use this command to clean-up old installation files in case of insufficient space and to ensure that you have at least 1GB of space in flash, to expand a new image.

The following sample output displays the cleaning up of unused files, by using the **install remove inactive** command:

```
Switch# install remove inactive
install remove: START Fri Jul 23 19:51:48 UTC 2021
Cleaning up unnecessary package files
Scanning boot directory for packages ... done.
Preparing packages list to delete ...
    cat9k-cc srdriver.17.05.01.SPA.pkg
      File is in use, will not delete.

Post_Remove_Cleanup: Passed on [1]

Finished Post_Remove_Cleanup

SUCCESS: install remove Fri Jul 23 19:52:25 UTC 2021
```

Step 2 Copy new image to flash

Switch#

a) **copy tftp:**///location]/directory]/filenameflash:

Use this command to copy the new image from a TFTP server to flash memory. The location is either an IP address or a host name. The filename is specified relative to the directory used for file transfers. Skip this step if you want to use the new image from a TFTP server.

601216545 bytes copied in 50.649 secs (11870255 bytes/sec)

b) dir flash:*.bin

Use this command to confirm that the image has been successfully copied to flash.

```
Switch# dir flash:*.bin
Directory of flash:/*.bin
Directory of flash:/
434184 -rw- 601216545 Jul 23 2021 10:18:11 -07:00 cat9k_iosxe.17.06.01.SPA.bin
11353194496 bytes total (8976625664 bytes free)
```

Step 3 Set boot variable

a) boot system flash:packages.conf

Use this command to set the boot variable to flash:packages.conf.

Switch(config) # boot system flash:packages.conf

b) no boot manual

Use this command to configure the switch to auto-boot. Settings are synchronized with the standby switch, if applicable.

Switch(config)# no boot manual
Switch(config)# exit

c) write memory

Use this command to save boot settings.

Switch# write memory

d) show bootvar

Use this command to verify the boot variable (packages.conf) and manual boot setting (no):

```
Switch# show bootvar
BOOT variable = bootflash:packages.conf
MANUAL_BOOT variable = no
BAUD variable = 9600
ENABLE_BREAK variable = yes
BOOTMODE variable does not exist
IPXE_TIMEOUT variable does not exist
CONFIG_FILE variable =
```

```
Standby BOOT variable = bootflash:packages.conf
Standby MANUAL_BOOT variable = no
Standby BAUD variable = 9600
Standby ENABLE_BREAK variable = yes
Standby BOOTMODE variable does not exist
Standby IPXE_TIMEOUT variable does not exist
Standby CONFIG FILE variable =
```

Step 4 Install image to flash

install add file activate commit

Use this command to install the image.

/flash/cat9k-srdriver.17.06.01.SPA.pkg

We recommend that you point to the source image on a TFTP server or the flash, if you have copied the image to flash memory.

The following sample output displays installation of the Cisco IOS XE Bengaluru 17.6.1 software image to flash:

```
Switch# install add file flash:cat9k_iosxe.17.06.01.SPA.bin activate commit
install add activate commit: START Fri Jul 23 16:37:25 IST 2021
*Jul 23 16:37:26.544 IST: %INSTALL-5-INSTALL START INFO: R0/0: install engine: Started

```

Note The system reloads automatically after executing the **install add file activate commit command**. You do not have to manually reload the system.

Step 5 Verify installation

After the software has been successfully installed, use the **dir flash:** command to verify that the flash partition has ten new .pkg files and two .conf files.

a) dir flash:*.conf

The following is sample output of the dir flash:*.pkg command:

```
Switch# dir flash:*.pkg
Directory of flash:/*.pkg
Directory of flash:/
475140 -rw- 2012104
                     Mar 19 2021 09:52:41 -07:00 cat9k-cc srdriver.17.05.01.SPA.pkg
475141 -rw- 70333380 Mar 19 2021 09:52:44 -07:00 cat9k-espbase.17.05.01.SPA.pkg
475142 -rw- 13256 Mar 19 2021 09:52:44 -07:00 cat9k-guestshell.17.05.01.SPA.pkg

                     Mar 19 2021 09:52:56 -07:00 cat9k-wlc.17.05.01.SPA.pkg
491524 -rw- 25711568 Jul 23 2021 11:49:33 -07:00 cat9k-cc srdriver.17.06.01.SPA.pkg
491525 -rw- 78484428 Jul 23 2021 11:49:35 -07:00 cat9k-espbase.17.06.01.SPA.pkg
491526 -rw- 1598412 Jul 23 2021 11:49:35 -07:00 cat9k-guestshell.17.06.01.SPA.pkg
```

491527-rw-404153288Jul 23202111:49:47-07:00cat9k-rpbase.17.06.01.SPA.pkg491533-rw-31657374Jul 23202111:50:09-07:00cat9k-rpboot.17.06.01.SPA.pkg491528-rw-27681740Jul 23202111:49:48-07:00cat9k-sipbase.17.06.01.SPA.pkg491529-rw-52224968Jul 23202111:49:49-07:00cat9k-sipbase.17.06.01.SPA.pkg491530-rw-31130572Jul 23202111:49:50-07:00cat9k-sipspa.17.06.01.SPA.pkg491531-rw-14783432Jul 23202111:49:51-07:00cat9k-webui.17.06.01.SPA.pkg491532-rw-9160Jul 23202111:49:51-07:00cat9k-webui.17.06.01.SPA.pkg

11353194496 bytes total (8963174400 bytes free)

b) dir flash:*.conf

The following is sample output of the **dir flash:*.conf** command. It displays the .conf files in the flash partition; note the two .conf files:

• packages.conf-the file that has been re-written with the newly installed .pkg files.

• cat9k iosxe.17.06.01.SPA.conf— a backup copy of the newly installed packages.conf file.

Switch# dir flash:*.conf

```
Directory of flash:/*.conf
Directory of flash:/
16631 -rw- 4882 Jul 23 2021 05:39:42 +00:00 packages.conf
16634 -rw- 4882 Jul 23 2021 05:34:06 +00:00 cat9k iosxe.17.06.01.SPA.conf
```

Step 6 Verify version

show version

After the image boots up, use this command to verify the version of the new image.

The following sample output of the **show version** command displays the Cisco IOS XE Bengaluru 17.6.1 image on the device:

```
Switch# show version
Cisco IOS XE Software, Version 17.06.01
Cisco IOS Software [Bengaluru], Catalyst L3 Switch Software (CAT9K_IOSXE), Version 17.6.1,
RELEASE SOFTWARE (fc1)
Technical Support: http://www.cisco.com/techsupport
Copyright (c) 1986-2021 by Cisco Systems, Inc..
<output truncated>
```

Downgrading in Install Mode

Follow these instructions to downgrade from one release to another, in install mode. To perform a software image downgrade, you must be booted into IOS through **boot flash:packages.conf**.

Before you begin

Note that you can use this procedure for the following downgrade scenarios:

| When downgrading from | То | |
|-------------------------------|--|--|
| Cisco IOS XE Bengaluru 17.6.x | Cisco IOS XE Bengaluru 17.5.x or earlier releases. | |

Note New switch models that are introduced in a release cannot be downgraded. The release in which a module is introduced is the minimum software version for that model. We recommend upgrading all existing hardware to the same release as the latest hardware.

The sample output in this section shows downgrade from Cisco IOS XE Bengaluru 17.6.1 to Cisco IOS XE Bengaluru 17.5.1, using **install** commands.

Procedure

Step 1 Clean-up

install remove inactive

Use this command to clean-up old installation files in case of insufficient space and to ensure that you have at least 1GB of space in flash, to expand a new image.

The following sample output displays the cleaning up of unused files, by using the **install remove inactive** command:

```
Switch# install remove inactive
install remove: START Fri Jul 23 11:42:27 IST 2021
Cleaning up unnecessary package files

Switch#
```

Step 2 Copy new image to flash

a) copy tftp:[[//location]/directory]/filenameflash:

Use this command to copy the new image from a TFTP server to flash memory. The location is either an IP address or a host name. The filename is specified relative to the directory used for file transfers. Skip this step if you want to use the new image from a TFTP server.

b) dir flash:

Use this command to confirm that the image has been successfully copied to flash.

Switch# dir flash:*.bin Directory of flash:/*.bin

Directory of flash:/

434184 -rw- 508584771 Jul 23 2021 13:35:16 -07:00 cat9k_iosxe.17.05.01.SPA.bin 11353194496 bytes total (9055866880 bytes free)

Step 3 Set boot variable

a) boot system flash:packages.conf

Use this command to set the boot variable to **flash:packages.conf**.

Switch(config) # boot system flash:packages.conf

b) no boot manual

Use this command to configure the switch to auto-boot. Settings are synchronized with the standby switch, if applicable.

Switch(config)# no boot manual
Switch(config)# exit

c) write memory

Use this command to save boot settings.

Switch# write memory

d) show bootvar

Use this command to verify the boot variable (packages.conf) and manual boot setting (no):

```
Switch# show bootvar
BOOT variable = bootflash:packages.conf
MANUAL_BOOT variable = no
BAUD variable = 9600
ENABLE_BREAK variable = yes
BOOTMODE variable does not exist
IPXE_TIMEOUT variable does not exist
CONFIG FILE variable =
```

```
Standby BOOT variable = bootflash:packages.conf
Standby MANUAL_BOOT variable = no
Standby BAUD variable = 9600
Standby ENABLE_BREAK variable = yes
Standby BOOTMODE variable does not exist

```

Step 4 Downgrade software image

install add file activate commit

Use this command to install the image.

We recommend that you point to the source image on a TFTP server or the flash, if you have copied the image to flash memory.

The following example displays the installation of the Cisco IOS XE Bengaluru 17.5.1 software image to flash, by using the **install add file activate commit** command.

```
Switch# install add file flash:cat9k_iosxe.17.05.01.SPA.bin activate commit
install add activate commit: START Fri Jul 23 21:37:25 IST 2021
*Jul 23 16:37:26.544 IST: %INSTALL-5-INSTALL START INFO: R0/0: install engine: Started

```

Note The system reloads automatically after executing the **install add file activate commit** command. You do not have to manually reload the system.

Step 5 Verify version

show version

Finished Commit

After the image boots up, use this command to verify the version of the new image.

Note When you downgrade the software image, the ROMMON version does not downgrade. It remains updated.

The following sample output of the **show version** command displays the Cisco IOS XE Bengaluru 17.5.1 image on the device:

```
Switch# show version
Cisco IOS XE Software, Version 17.05.01
Cisco IOS Software [Bengaluru], Catalyst L3 Switch Software (CAT9K_IOSXE), Version 17.5.1,
RELEASE SOFTWARE (fc1)

In Service Software Upgrade (ISSU) with Cisco StackWise Virtual and Dual Supervisor Module Configuration

Follow the instructions described here to perform an In Service Software Upgrade (ISSU) upgrade. Use the procedure described here, only for the releases indicated in the table below. For more general information about ISSU release support and recommended releases, see this technical reference document: In-Service Software Upgrade (ISSU).

Before you begin

Note that you can use this ISSU procedure only for the following scenarios:

| When upgrading from | Use these commands | То |
|-------------------------------|---|-------------------------------|
| Cisco IOS XE Amsterdam 17.3.x | install add file activate issu commit | Cisco IOS XE Bengaluru 17.6.x |
| Not applicable | ISSU does not support downgrade. To downgrade, see Downgrading in Install Mode, on page 23. | Not applicable |

Procedure

Step 1 enable

Enables privileged EXEC mode. Enter your password if prompted.

Switch# enable

Step 2 install add file activate issu commit

Use this command to automate the sequence of all the upgrade procedures, including downloading the images to both the switches, expanding the images into packages, and upgrading each switch as per the procedures.

Switch# install add file tftp:cat9k_iosxe.17.06.01.SPA.bin activate issu commit

The following sample output displays installation of Cisco IOS XE Amsterdam 17.3.2a software image with ISSU procedure.

Switch# install add file tftp:cat9k_iosxe.17.06.01.SPA.bin activate issu commit install_add_activate_commit: START Thu Jul 19 06:16:32 UTC 2021 Downloading file tftp://172.27.18.5//cat9k iosxe.17.06.01.SPA.bin

install commit ISSU
```

Step 3 show version

Use this command to verify the version of the new image.

The following sample output of the **show version** command displays the Cisco IOS XE Amsterdam 17.3.2a image on the device:

```
Switch# show version
Cisco IOS XE Software, Version 17.06.01
Cisco IOS Software [Amsterdam], Catalyst L3 Switch Software (CAT9K_IOSXE), Version 17.6.1,
RELEASE SOFTWARE (fc2)
Technical Support: http://www.cisco.com/techsupport
Copyright (c) 1986-2021 by Cisco Systems, Inc.
<output truncated>
```

Step 4 show issu state [*detail*]

Use this command to verify that no ISSU process is in pending state.

```
Switch# show issu state detail
--- Starting local lock acquisition on chassis 2 ---
Finished local lock acquisition on chassis 2
No ISSU operation is in progress
```

Switch#

Step 5 exit

Exits privileged EXEC mode and returns to user EXEC mode.

Field-Programmable Gate Array Version Upgrade

A field-programmable gate array (FPGA) is a type of programmable memory device that exists on Cisco switches. They are re-configurable logic circuits that enable the creation of specific and dedicated functions.

To check the current FPGA version, enter the **show firmware version all** command in IOS mode or the **version -v** command in ROMMON mode.

Note

• Not every software release has a change in the FPGA version.

• The version change occurs as part of the regular software upgrade and you do not have to perform any other additional steps.

Licensing

This section provides information about the licensing packages for features available on Cisco Catalyst 9000 Series Switches.

License Levels

The software features available on Cisco Catalyst 9600 Series Switches fall under these base or add-on license levels.

Base Licenses

Network Advantage

Add-On Licenses

Add-On Licenses require a Network Essentials or Network Advantage as a pre-requisite. The features available with add-on license levels provide Cisco innovations on the switch, as well as on the Cisco Digital Network Architecture Center (Cisco DNA Center).

DNA Advantage

To find information about platform support and to know which license levels a feature is available with, use Cisco Feature Navigator. To access Cisco Feature Navigator, go to https://cfnng.cisco.com. An account on cisco.com is not required.

Available Licensing Models and Configuration Information

• Cisco IOS XE Gibraltar 16.11.1 to Cisco IOS XE Amsterdam 17.3.1: Smart Licensing is the default and the only supported method to manage licenses.

In the software configuration guide of the required release, see System Management \rightarrow Configuring Smart Licensing.

Cisco IOS XE Amsterdam 17.3.2a and later: Smart Licensing Using Policy, which is an enhanced version
of Smart Licensing, is the default and the only supported method to manage licenses.

In the software configuration guide of the required release (17.3.x onwards), see System Management \rightarrow Smart Licensing Using Policy.

For a more detailed overview on Cisco Licensing, go to cisco.com/go/licensingguide.

License Levels - Usage Guidelines

• The duration or term for which a purchased license is valid:

| Smart Licensing Using Policy | Smart Licensing |
|---|--|
| • Perpetual: There is no expiration date for such a license. | • Permanent: for a license level, and without an expiration date. |
| • Subscription: The license is valid only until a certain date (for a three, five, or seven year period). | Term: for a license level, and for a three, five, or seven year period. Evaluation: a license that is not registered. |

- Base licenses (Network-Advantage) are ordered and fulfilled only with a perpetual or permanent license type.
- Add-on licenses (DNA Advantage) are ordered and fulfilled only with a subscription or term license type.
- An add-on license level is included when you choose a network license level. If you use DNA features, renew the license before term expiry, to continue using it, or deactivate the add-on license and then reload the switch to continue operating with the base license capabilities.
- Evaluation licenses cannot be ordered. They are not tracked via Cisco Smart Software Manager and expire after a 90-day period. Evaluation licenses can be used only once on the switch and cannot be regenerated. Warning system messages about an evaluation license expiry are generated only 275 days after expiration and every week thereafter. An expired evaluation license cannot be reactivated after reload. This applies only to *Smart Licensing*. The notion of evaluation licenses does not apply to *Smart Licensing Using Policy*.

Scaling Guidelines

For information about feature scaling guidelines, see the Cisco Catalyst 9600 Series Switches datasheets at: https://www.cisco.com/c/en/us/products/collateral/switches/catalyst-9600-series-switches/nb-06-cat9600-series-data-sheet-cte-en.html https://www.cisco.com/c/en/us/products/collateral/switches/catalyst-9600-series-switches/nb-06-cat9600-series-line-data-sheet-cte-en.html https://www.cisco.com/c/en/us/products/collateral/switches/catalyst-9600-series-switches/nb-06-cat9600-series-line-data-sheet-cte-en.html https://www.cisco.com/c/en/us/products/collateral/switches/catalyst-9600-series-switches/nb-06-cat9600-series-line-data-sheet-cte-en.html

Limitations and Restrictions

- Auto negotiation: The SFP+ interface (TenGigabitEthernet0/1) on the Ethernet management port with a 1G transceiver does not support auto negotiation.
- Control Plane Policing (CoPP)—The **show run** command does not display information about classes configured under system-cpp policy, when they are left at default values. Use the **show policy-map system-cpp-policy** or the **show policy-map** control-plane commands in privileged EXEC mode instead.
- Convergence: During SSO, a higher convergence time is observed while removing the active supervisor module installed in slot 3 of a C9606R chassis.
- Hardware Limitations Optics:
 - Installation restriction for C9600-LC-24C linecard with CVR-QSFP-SFP10G adapter This adapter must not be installed on an even numbered port where the corresponding odd numbered port is

configured as 40GE port. For example, if port 1 is configured as 40GE, CVR-QSFP-SFP10G must not be installed in port 2.

Installation restriction for C9600-LC-24C linecard with CVR-QSFP-SFP10G adapter — If you insert a 40-Gigabit Ethernet Transceiver Module to odd numbered port, the corresponding even numbered port does not work with CVR-QSFP-SFP10G adapter.

- GLC-T and GLC-TE operating at 10/100Mbps speed are not supported with Cisco QSA Module (CVR-QSFP-SFP10G).
- SFP-10G-T-X supports 100Mbps/1G/10G speeds based on auto negotiation with the peer device. You cannot force speed settings from the transceiver.
- Hardware Limitations Power Supply Modules:
 - Input voltage for AC power supply modules—All AC-input power supply modules in the chassis must have the same AC-input voltage level.
 - Using power supply modules of different types—When mixing AC-input and DC-input power supplies, the AC-input voltage level must be 220 VAC.
- In-Service Software Upgrade (ISSU)
 - While ISSU allows you to perform upgrades with zero downtime, we recommend you to do so during a maintenance window only.
 - If a new feature introduced in a software release requires a change in configuration, the feature should not be enabled during ISSU.
 - If a feature is not available in the downgraded version of a software image, the feature should be disabled before initiating ISSU.
- QoS restrictions
 - When configuring QoS queuing policy, the sum of the queuing buffer should not exceed 100%.
 - For QoS policies, only switched virtual interfaces (SVI) are supported for logical interfaces.
 - QoS policies are not supported for port-channel interfaces, tunnel interfaces, and other logical interfaces.
- Secure Shell (SSH)
 - Use SSH Version 2. SSH Version 1 is not supported.
 - When the device is running SCP and SSH cryptographic operations, expect high CPU until the SCP read process is completed. SCP supports file transfers between hosts on a network and uses SSH for the transfer.

Since SCP and SSH operations are currently not supported on the hardware crypto engine, running encryption and decryption process in software causes high CPU. The SCP and SSH processes can show as much as 40 or 50 percent CPU usage, but they do not cause the device to shutdown.

Smart Licensing Using Policy: Starting with Cisco IOS XE Amsterdam 17.3.2a, with the introduction
of Smart Licensing Using Policy, even if you configure a hostname for a product instance or device, only
the Unique Device Identifier (UDI) is displayed. This change in the display can be observed in all licensing

utilities and user interfaces where the hostname was displayed in earlier releases. It does not affect any licensing functionality. There is no workaround for this limitation.

The licensing utilities and user interfaces that are affected by this limitation include only the following: Cisco Smart Software Manager (CSSM), Cisco Smart License Utility (CSLU), and Smart Software Manager On-Prem (SSM On-Prem).

- TACACS legacy command: Do not configure the legacy **tacacs-server host** command; this command is deprecated. If the software version running on your device is Cisco IOS XE Gibraltar 16.12.2 or a later release, using the legacy command can cause authentication failures. Use the **tacacs server** command in global configuration mode.
- USB Authentication—When you connect a Cisco USB drive to the switch, the switch tries to authenticate the drive against an existing encrypted preshared key. Since the USB drive does not send a key for authentication, the following message is displayed on the console when you enter **password encryption aes** command:

```
Device(config)# password encryption aes
Master key change notification called without new or old key
```

- MACsec is not supported on Software-Defined Access deployments.
- VLAN Restriction—It is advisable to have well-defined segregation while defining data and voice domain during switch configuration and to maintain a data VLAN different from voice VLAN across the switch stack. If the same VLAN is configured for data and voice domains on an interface, the resulting high CPU utilization might affect the device.
- YANG data modeling limitation—A maximum of 20 simultaneous NETCONF sessions are supported.
- Embedded Event Manager—Identity event detector is not supported on Embedded Event Manager.
- The File System Check (fsck) utility is not supported in install mode.

Caveats

Caveats describe unexpected behavior in Cisco IOS-XE releases. Caveats listed as open in a prior release are carried forward to the next release as either open or resolved.

Cisco Bug Search Tool

The Cisco Bug Search Tool (BST) allows partners and customers to search for software bugs based on product, release, and keyword, and aggregates key data such as bug details, product, and version. The BST is designed to improve the effectiveness in network risk management and device troubleshooting. The tool has a provision to filter bugs based on credentials to provide external and internal bug views for the search input.

To view the details of a caveat, click on the identifier.

Open Caveats in Cisco IOS XE Bengaluru 17.6.x

There are no open caveats in this release.

Resolved Caveats in Cisco IOS XE Bengaluru 17.6.8

| ldentifier | Description |
|------------|--|
| CSCwc67790 | "verify bootflash:" command not able to process embedded hash in .bin file |
| CSCwi79020 | Unexpected reload on C9K switch while running dot1X and device tracking |

Resolved Caveats in Cisco IOS XE Bengaluru 17.6.7

| Identifier | Description |
|------------|--|
| CSCwi37669 | macro is getting pushed on closed and open auth ports when macro is global enabled |
| CSCwf10970 | fed process crashing after AVB policy-map manipulation |
