## Inleiding

Dit document toont aan hoe u toegangslijsten op kiesinterfaces met een RADIUS-server kunt toepassen. Er zijn twee mogelijke methoden:

- Defineert de genummerde toegangslijst op de router en verwijst vervolgens naar de genummerde toegangslijst op de RADIUS-server. De meeste Cisco IOS® softwareleases ondersteunen dit. Bepaal bijvoorbeeld de genummerde toegangslijst op de router en referentie deze op de server.
- Defineert de gehele toegangslijst op de server. Cisco IOS-softwarelease 11.3 of hoger is vereist voor deze methode per gebruiker. Specificeer bijvoorbeeld de toegangslijst op de RADIUS-server (in plaats van op de NAS). Wanneer de aanroep verbonden is, authenticert NAS de aanroep met de RADIUS server. Samen met enige authenticatie informatie, keert de server de toegangslijst terug naar de NAS die dan van toepassing is op de kiesinterface.

**Opmerking:** Voor ISDN moet u de methode **per gebruiker** gebruiken en u moet virtuele profielen op de router configureren. Deze worden voor Cisco IOS-softwarelease 11.3 beschreven in [Virtuele profielen configureren](#).

## Voorwaarden

## Vereisten

Er zijn geen specifieke vereisten van toepassing op dit document.

## Gebruikte componenten

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies.

- Cisco IOS-softwarerelease 11.1 of hoger (definieer toegangslijsten op de router)
- Cisco IOS-softwarerelease 11.3 of hoger (definieer toegangslijsten op de server)
- Cisco Secure ACS UNIX of Cisco Secure ACS voor Windows 2.x of Livingston RADIUS of Merit RADIUS

De informatie in dit document is gebaseerd op apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als u in een levend netwerk werkt, zorg er dan voor dat u de potentiële impact van om het even welke opdracht begrijpt alvorens het te gebruiken.

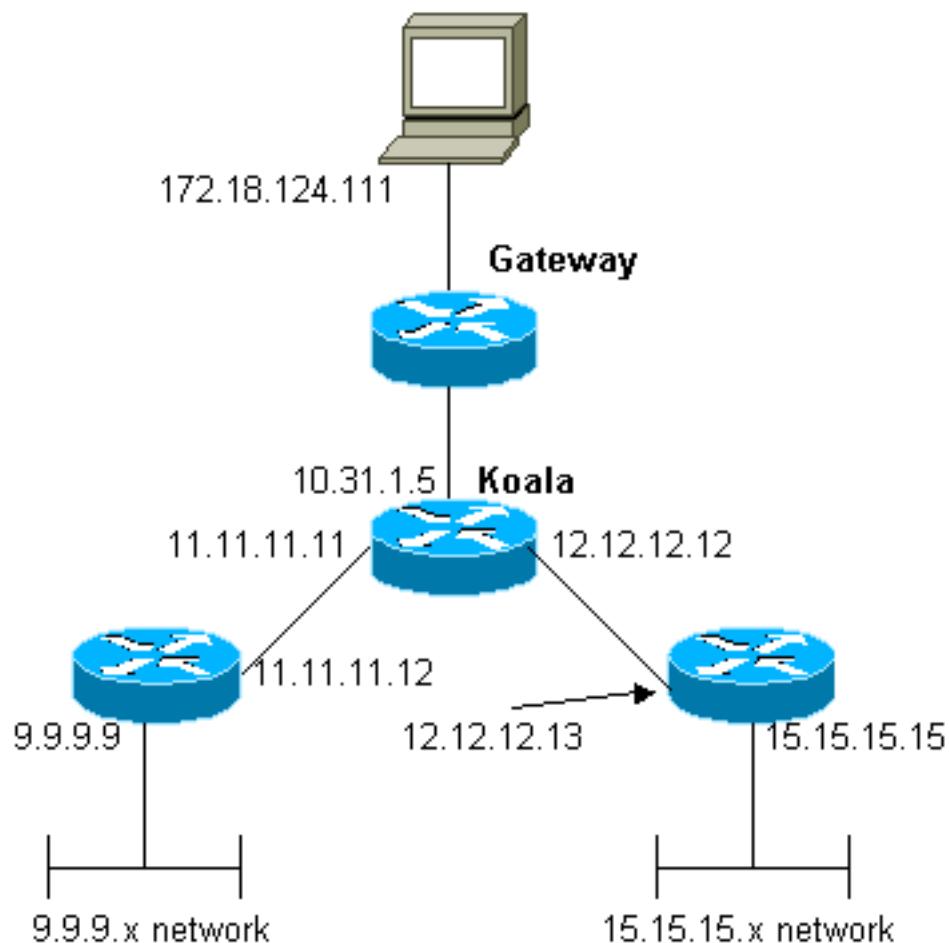

## Conventies

Raadpleeg [Cisco Technical Tips Conventions](#) (Conventies voor technische tips van Cisco) voor meer informatie over documentconventies.

**N.B.:** Als u deze opdrachten wilt gebruiken, verwijdert u de opdrachten vet uit de bovenstaande configuratie en voegt u deze opdrachten toe, zoals door uw Cisco IOS-softwarelease bepaald.

## Server Configuraties - toegangslijsten op de router

Deze procedure omvat de configuratie van de toegangslijst zelf op de router. De RADIUS-server is ingesteld met het toegangslijstnummer dat wordt toegepast. Wanneer de vraag authentiek is, keert de server van de RADIUS het toegangslijstnummer terug aan NAS, dat dan de overeenkomstige toegangslijst toepast.

### serverconfiguratie - Cisco Secure ACS voor Windows 2.X - RADIUS

Volg de onderstaande stappen:

1. Vul in de gebruikersinstellingen de naam en het wachtwoord in.
2. Controleer in de groepsinstellingen: kenmerk 6 - **framedkenmerk** 7 - **PPP**Kenmerk 11 - **filter-ID**. In het onderstaande gebied type **101.in**  
**Opmerking:** kenmerk 11 geeft aan dat toegangslijst 101 van toepassing is. Zorg ervoor dat toegangslijst 101 op de router is geconfigureerd.

### serverconfiguratie - Cisco Secure ACS UNIX - RADIUS

```
rtp-evergreen# ./ViewProfile -p 9900 -u chaprtr
User Profile Information
user = chaprtr{
profile_id = 51
profile_cycle = 1
radius=Cisco {
check_items= {
2="chaprtr"
}
reply_attributes= {
6=2
7=1
11=101.in
}
}
}
```

**Opmerking:** kenmerk 11 geeft aan dat toegangslijst 101 van toepassing is. Zorg ervoor dat toegangslijst 101 op de router is geconfigureerd.

### serverconfiguratie - Livingston RADIUS

```
chaprtr Password = chaprtr
User-Service-Type = Framed-User,
Framed-Protocol = PPP,
Framed-Filter-Id = 101.in
```

**Opmerking:** Hiermee wordt aangegeven dat toegangslijst 101 van toepassing is. Zorg ervoor dat toegangslijst 101 op de router is geconfigureerd.

## Toegangslijsten op de server definiëren

**Opmerking:** Routeverklaringen hoeven niet van de server naar de router te worden doorgegeven. de wijzergbruiker pakt normaal de routes van de router aan. De aanwezigheid van de routeverklaringen op de router hangt af van de vraag of de routes van de server moeten worden doorgegeven of van de router moeten worden opgenomen. In dit voorbeeld worden de toegangslijst en de routeverklaringen echter doorgegeven.

```
ip route 9.9.9.0 255.255.255.0 11.11.11.12
ip route 15.15.15.0 255.255.255.0 12.12.12.13
```

In deze voorbeeldconfiguratie, is het passeren van de routes van de server slechts ter illustratie.

### **serverconfiguratie - Cisco Secure ACS voor Windows 2.x - RADIUS**

Voer de volgende stappen uit:

1. Vul de naam en het wachtwoord in bij de gebruikersinstellingen.
2. Controleer in de groepsinstellingen:kenmerk 6 - **framed**kenmerk 7 - **PPP**
3. Selecteer onder Cisco RADIUS-kenmerken **[009\001] AV-papier** en typ de volgende tekst in het onderste vakje:

```
ip:route#1=9.9.9.9 255.255.255.255 11.11.11.12
ip:route#2=15.15.15.15 255.255.255.255 12.12.12.13

## Opdrachten debug

- **debug van verificatie** - Informatie over AAA-verificatie.
- **debug van een autorisatie** - Informatie over AAA-autorisatie.
- **debug a per-gebruiker** - Informatie over de configuratie-instellingen per gebruiker op de router of toegangsserver die vanaf een AAA-server worden verzonden.
- **debug straal** - Hiermee geeft u gedetailleerde zuiveringsinformatie weer die bij RADIUS hoort.
- **debug PPP-onderhandeling** - Hier worden PPP-pakketten weergegeven die tijdens PPP-start

worden verzonden, waar PPP-opties worden onderhandeld.
